*Dermatology* CRC Press

The best-selling text has been completely revised and revitalised in this fifth edition, with the authors once again encouraging general practitioners, medical students, general physicians and early stage dermatology specialist trainees and interns to relish the unique challenge of diagnosing and treating skin conditions. *Clinical Dermatology*, 5th edition contains over 400 high quality pictures and diagrams combined with colourful phrases to illustrate and entertain as it teaches. The book has established a reputation as a 'way of learning' and as an accessible guide to the subject for the aspiring specialist. Readers are guided through the maze that too often lies between the presenting skin complaint and its final diagnosis and treatment. The authors have skilfully crafted an easily read text with

enough detail to clarify the subject, but not enough to obscure it. This fifth edition contains new chapters on non-invasive physical treatment and dermoscopy, and new material on cosmetic dermatology, surgical dermatology, the skin and the psyche, and dermatoses of non-Caucasian skin. The text throughout the book has been updated in line with developments in the science and practice of dermatology. "... brilliantly succeeds in enticing you to look further. The writing is clear, and the joint British-American authorship avoids any parochial views." From a review of a previous edition in *BMJ* "...a very well-presented book...an excellent aid for teaching. I recommend this book highly to individuals and departments." From a review of a previous edition in *J Derm Treatment* "... provides a good overview of the structure and function of the skin as well as a good foundation for learning dermatology...well organized and includes a chapter dedicated to skin signs of systemic disease which is not covered in the other dermatology primers." From a review

of a previous edition in *JAMA*

*Nail Disorders* John Wiley & Sons

This book gives readers enough knowledge of the required principles so they can adapt the knowledge to new materials and types of devices. As device dimensions shrink and more exotic compound semiconductor materials are used in electronic circuits, the physics involved in understanding the device behavior becomes more complicated and more fascinating.

*The Biology of Hair Growth* is based on a conference on *The Biology of Hair Growth*, sponsored by the British Society for Research on Ageing, held at the Royal College of Surgeons, in London, 7-9 August 1957. The papers presented at this conference, and a few others, have been gathered in this book to serve as a source reference for all those interested in research on hair and hair growth. The application of modern methods in histology, cytology, histochemistry, physiology, electron microscopy, the use of radioactive isotopes, and modern biochemical techniques have given greater insight into the phenomena of growth and differentiation of hair follicles than ever before. The book opens with a chapter on the embryology of hair. Separate chapters follow on the anatomy and histochemistry of the hair follicle; the electron microscopy of keratinized

tissues; the chemistry of keratinization; the mitotic activity of the follicle; and the the vascularity and patterns of growth of hair follicles. Subsequent chapters deal with behavior of pigment cells and epithelial cells in the hair follicle; the nature of hair pigment; the effects of nutrition on hair growth; and effects of chemical agents, ionizing radiation, and particular illnesses on hair roots.

**Nonsurgical Lip and Eye Rejuvenation Techniques** CRC Press

This book offers clinical physicians and plastic surgeons a detailed and comprehensive overview of the nonsurgical techniques used for rejuvenation of the lips and eyes. A key aim is to provide practical guidelines for patient selection in order to optimize the choice of treatment in different circumstances. These guidelines will assist in ensuring that the selected rejuvenation technique and the number of applications are appropriate to the specific disorder being treated, thereby maximizing benefits and minimizing side effects. The book explains pretreatment evaluation and describes a wide variety of rejuvenation techniques, including the use of hyaluronic acid fillers, botulinum toxins, skin needling, chemical peels, radiofrequency, ultrasound, and fractional lasers (ablative and nonablative). Contraindications to and complications of the various treatments are clearly identified. A notable feature is the emphasis placed on the role of combined treatments and how they can work in a complementary way to

deliver optimal outcomes. The integrated, less invasive approach to periorbital and lip rejuvenation described here by acknowledged experts in the field will enable practitioners to choose with confidence the best aesthetic procedures and innovative tools for their patients.

From 1899 until 1929, the Locomobile Company of America produced high quality automobiles. Founded by Amzi Barber and John Walker, the company originally made steam cars under license from Stanley Steamer.

The car was advertised as a combination auto and locomotive or, a

“Locomobile”. Based in Bridgeport, Conn., Locomobile gained a reputation for quality and performance, but only after switching to gas engines in 1902. A Locomobile won the prestigious Vanderbilt Cup Race in 1908, and in 1909-10 Mrs. Harriet Clark Fisher took a Loco around the world, a journey recounted in this text.

Locomobile was sold in 1922 to Durant, who continued producing the line until 1929. Originally created by the Locomobile Company in 1911, this wonderful book contains dozens of photos and diagrams, as well as illustrative text, about one of America's great cars. Although slightly reformatted, care has been taken to preserve the integrity of the text.
