Networks ranging from village level to transnational level have always played a crucial role in Chinese society. The contributors to this volume aim to trace the interaction between various networks which have existed from the 19th century to the present day. The articles deal with theoretical concepts, historical examples, such as non-state responses to the North China Famine (1876 - 1879), the role of missionaries in the modernization of China and disaster management, including recent inter-ethnic business competition in Hong Kong, Han settlers in Xinjiang, temple festivals in Macau and urban migrants' social networks in today's China. By drawing on new material and theoretical frameworks, these studies shed fresh light on the ways in which various forms of networks have shaped Chinese society, while at the same time questioning traditional

and rigid perspectives of Chinese society based solely on networks and guanxi.

With her heart in tatters after a relationship break-up, Rose Bennett swaps her hometown of London for the sunny shores of Australia - but she arrives to find the Shingle Valley shrouded in winter. As the weather improves, Rose starts to unlock the secrets of the valley - from bonfire ceremonies and wine-making traditions to eccentric locals and their histories. Despite herself, Rose starts to fall in love: with the valley, the wines, the two children she's helping to look after - and with the handsome and brilliant Mark Cameron, owner of the troubled Kalkari Wines estate. What will happen when Mark's estranged wife, the tempestuous Isabella, returns? Will Rose find a future in the Shingle Valley, or will she be forced to leave? Modern day security technologies, such as passwords, authentication protocols, firewalls, and access-control Mechanisms, are preventive in nature. That is, they stop unauthorized parties before they are able to access data, information and services or violate system policies. However, the dramatically increased scale and complexity of Internet commerce, social networking, remote work, distance learning, and myriad other forms of social, economic, and intellectual engagement online with both strangers and friends has increased the awareness that these preventive mechanisms are inadequate in certain circumstances. The result is a growing interest in accountability mechanisms to complement preventive measures. In this survey of the concept of accountability in information systems, the authors focus on systems in which policy violations are punished; that is, the actors are held accountable for their actions. As there is no accepted definition of the precise meaning of accountability in terms of such systems, the authors provide the reader with a broad overview of the concept. In doing so, they introduce the topic and place it in context of the social and systematic factors which help to define the term. They proceed to discuss in depth the mechanisms and domains across numerous disciplines before describing the available tools and proofs for implementing accountability in systems. Finally, they summarize

the ideas, key published papers and ideas for future work. This monograph provides the reader with a thorough overview of the concept of accountability in modern day computing systems. It enables the reader to quickly understand the concept and the progress that has been to date in implementing the tools for the next generation of online security systems.

How did the Victorians perceive Muslims in the British Empire and beyond? How were these perceptions propagated by historians and scholars, poets, dramatists and fiction writers of the period? For the first time, Shahin Kuli Khan Khattak brings to life Victorian Britain's conceptions and misconceptions of the Muslim World using a thorough investigation of varied cultural sources of the period. She discovers the prevailing representation of Muslims and Islam in the two major spheres of British influence - India and the Ottoman Empire - was reinforced by reoccurring themes: through literature and entertainment the public saw 'the Mahomedan' as the 'noble savage', a perception reinforced through travel writing and fiction of the 'exotic east' and the 'Arabian Nights'. "Islam and the Victorians" will be an important contribution to understanding the apprehensions and misapprehensions about Islam in the nineteenth century, providing a fascinating historical backdrop to many of today's concerns.

This book analyses various aspects of social responsibility, corporate responsibility, sustainability and governance. Rather

than focusing narrowly on a single perspective, it investigates a number of problems and scenarios that can all be considered an aspect of one of these fields, and shows how they are all related to each other and to the problems and issues facing businesses. This approach is based on the tradition of the Social Responsibility Research Network, which in its 15-year history has sought to broaden the discourse and to treat all research in these areas as inter-related and relevant to business. The book collects the best papers presented at the 15th International Conference on Corporate Social Responsibility and 6th Organisational Governance Conference held in Melbourne, Australia in September 2016.
