It is the living movement of water that makes life on Earth possible. Based on spiritual science and on their own numerous experiments, Theodor and Wolfram Schwenk show that our Earth is a living organism, with water as a sensory organ that perceives vital cosmic influences and transmits them into earthly life. This pioneering classic on water is more relevant now than ever before.

Ages in Chaos Harvest House Publishers

Trends of the last few years, including global health crises, political division, and the ongoing threat to social-environmental survival, have been continually obscured by disinformation and misinformation and therefore created a need for stronger global technological media policy. It is no longer acceptable or moral to support a global communication network based only on market factors and propaganda.

The Handbook of Research on Global Media's Preternatural Influence on Global Technological Singularity, Culture, and Government views preternatural healing of the media-sphere from a variety of perspectives on the dynamic of heart-coherent entertainment. Specifically, it addresses the subject of a healthy media from a variety of fractal perspectives. Covering topics such as collective unconscious, mediated reality, and government media trust, this major reference work is an essential resource for librarians, media specialists, media analysts, sociologists, government employees, communications specialists, psychologists, researchers, educators, academicians, and students.

Using close visual analysis of drawings, artist interviews, critical analysis and exegesis, *Drawing Investigations* examines how artists use drawing as an investigative tool to reveal information that would otherwise remain unseen and unnoticed. How does drawing add shape to ideas? How does the artist

accommodate to challenges and restraints of a particular environment? To what extent is a drawing complementary and continuous with its subject and where is it disruptive and provocative? Casey and Davies address these questions while focusing on artists working collaboratively and the use of drawing in challenging or unexpected environments. *Drawing Investigations* evaluates the emergence of a way of thinking among an otherwise disconnected group of artists by exploring commonalities in the application of analytical drawing to the natural world, urban environment, social forces and lived experience. Examples represent a spectrum of research in international contexts: an oceanographic Institute in California, the archives of Amsterdam's Rijksmuseum, the Antarctic Survey, geothermal research in Japan and the Kurdish diaspora in Iraq. Issues are situated in the contemporary theory and practice of drawing including relationships to historical precedents. By exploring drawing's capacity to capture and describe experience, to sharpen visual faculties and to bridge embodied and conceptual knowledge, *Drawing Investigations* offers a fresh critical perspective on contemporary drawing practice.

The Permaculture Promise Little, Brown

Permaculture is a sustainability buzzword, but many people wonder what it actually means and why it is relevant. Originally coined by combining the words permanent and agriculture, permaculture has evolved into an optimistic approach connecting all the systems of human life: gardening, housing, transportation, energy, and how we structure our communities. The *Permaculture Promise* explains in simple

terms why permaculture may be the key to unlocking a livable future on our planet. Author Jono Neiger asserts that humans can thrive while simultaneously making Earth healthier and not destroying it. The book shows 22 ways that permaculture can create a better future for all living things. Profiles of people and communities — including an urban dweller who tore up her driveway to create a vegetable garden and a California housing development that dedicates a third of its land to parks, orchards, and gardens — will inspire you to incorporate permaculture principles into your life today.

From an internationally acclaimed economist, a provocative call to jump-start economic growth by aggressively overhauling liberal democracy. Around the world, people who are angry at stagnant wages and growing inequality have rebelled against established governments and turned to political extremes. Liberal democracy, history's greatest engine of growth, now struggles to overcome unprecedented economic headwinds—from aging populations to scarce resources to unsustainable debt burdens. Hobbled by short-term thinking and ideological dogma, democracies risk falling prey to nationalism and protectionism that will deliver declining living standards. In *Edge of Chaos*, Dambisa Moyo shows why economic growth is essential to global stability, and why liberal democracies are failing to produce it today. Rather than turning away from democracy, she argues, we must fundamentally reform it. *Edge of Chaos* presents a radical blueprint for change in order to galvanize growth and ensure the survival of democracy in the twenty-first century.

Pattern and Chaos in Art, Science and Everyday Life BRILL

Describes the chaos apparent in simple mechanical systems with the goal of elucidating the connections between classical and quantum mechanics. It develops the relevant ideas of the last two decades via geometric intuition rather than algebraic manipulation. The historical and cultural background against which these scientific developments have occurred is depicted, and realistic examples are discussed in detail. This book enables entry-level graduate students to tackle fresh problems in this rich field.

In a concise study, Rudolf Steiner presents an inspirational sketch of the evolution of the Mysteries - from ancient Persia through Egypt and Greece, to the Christian era and the present day. He traces the line of initiates from Egyptian divinities Isis and Osiris to Moses, King Arthur's Round Table and the Holy Grail in the twelfth century. Steiner focuses on the process of initiation as a historical topic: how initiation worked in ancient

Egypt and in the late Middle Ages. But his presentation is also inspirational, leading to the question: How can we advance to initiation now? He underscores the potential for achieving enlightenment today without a teacher in the flesh, and explains the four stages of the process towards initiation. He also highlights the need for strenuous efforts to overcome the subtle power of evil – in the form of Lucifer and Ahriman – through selfless work. The four lectures collected here form an important landmark in Rudolf Steiner's biography: the first being delivered on 3 February 1913 – the very day that the Anthroposophical Society was founded. First published in English under the title *The Mysteries of the East and of Christianity* and unavailable for many years, this edition has been re-edited by Professor Frederick Amrine and features appendices, an index as well as an introduction by Robert McDermott.

Leading on the Edge of Chaos
Houghton Mifflin Harcourt

The present volume is the first to address the interrelationship between Goethe's scientific thought and work, his ideas on art and literary oeuvre, and chaos and complexity theories. The eleven studies assembled in it treat one or more elements or aspects of this interrelationship, ranging from basic concepts all the way to a model of an aesthetic-scientific methodology. In the process, the authors scrutinize chaos and complexity both as motif and motor of literary texts and nature within various contexts of past and present. The volume should be of interest to literary scholars, scientists, and philosophers of science, indeed, to all those who are interested in the continuities between the humanities and sciences, culture and nature.

In the eighteenth century, the received wisdom, based on biblical calculations, was that the Earth was just six thousand years old. James Hutton, a gentleman with a passion for rocks, knew that could not be the case. Looking at the irregular strata of the Earth he deduced that a much longer span of time would be required for the landscape he saw to have evolved. In the turbulent world of Enlightenment Scotland, he set out to prove it. Hutton's entourage in Edinburgh comprised the leading thinkers of the age, including Erasmus Darwin, Adam Smith, James Watt, David Hume, and Joseph Black. But his geological theories would ignite decades of profound religious debate. Ultimately, Hutton's discovery of deep time changed our view of the universe forever.

An unnoticed component of the present educational, social, and even ecological crises lies in the declining value given what we correctly call the "humanities." The study of the living words of great authors--Homer, Dante, Chaucer, Shakespeare, the Romantic poets, the Russian novelists--no longer forms the basis of the education of the human soul. The imagination is disparaged, marginalized, politicized, and devalued. Young people are instead fed a monotonous diet of information, scientism, and technology. While these are certainly important and useful--maybe even necessary to our survival--once they become the basis for educating our children, the result is an assault on what it means to be human. Built around the work of Christy MacKaye Barnes, the themes of this collection include the training of imagination, speech, and poetry, and expanding

human capacities through the study of great authors. The writers include many of the great first-generation English teachers in the Waldorf movement.

Contents: Part One Christy MacKaye Barnes, nine essays, including: "Can the Imagination Be Trained?" "The Crisis of the Word Today" "Why Write?"

"Schooling Capacities through the Study of Great Authors" "Backgrounds for Russian Literature" Part Two Adam Bittleston, "The Future of the English Language" L. Francis Edmunds, "Literature in the Upper School" Linda Sawers, "In the Footsteps of Dante" Isabelle Wyatt, "Chaucer and the Modern Consciousness" A. C. Harwood, "Fair Mountain and Fine City" Adam Bittleston, "Shakespeare's Troubled Kings" Ursula Grahl, "In Quest of the Holy Grail" L. Francis Edmunds, "The Trials of Parsifal" Hugh Hetherington, "Grail Mountain and Garden of Marvels" Eileen Hutchins, "Wolfram and Wagner" Adam Bittleston, "Christopher Fry and the Riddle of Evil" Susan Demanett, "Questing toward a True Understanding of Grammar" Dorit Winter, "We Love Grammar" This collection is essential for anyone interested in the Waldorf curriculum and in restoring a real study of literature for young people.

of him in like measure within myself, that is my highest wish. This noble individual was not conscious of the fact that at that very moment the divine within him and the divine of the universe were most intimately united. So, for Goethe, the resonance with a natural rationality seems part of the genius of modern science. Einstein's 'cosmic religion', which reflects Spinoza, also echoes Goethe's remark (Ibid. , Item 575 from 1829): Man must cling to the belief that the incomprehensible is

comprehensible. Else he would give up investigating. But how far will Goethe share the devotion of these cosmic rationalists to the beautiful harmonies of mathematics, so distant from any pure and 'direct observation'? Kepler, Spinoza, Einstein need not, and would not, rest with discovery of a pattern within, behind, as a source of, the phenomenal world, and they would not let even the most profound of descriptive generalities satisfy scientific curiosity. For his part, Goethe sought fundamental archetypes, as in his intuition of a Urpflanze, basic to all plants, infinitely plastic. When such would be found, Goethe would be content, for (as he said to Eckermann, Feb. 18, 1829): . . . to seek something behind (the Urphänomenon) is futile. Here is the limit. But as a rule men are not satisfied to behold an Urphänomenon. They think there must be something beyond. They are like children who, having looked into a mirror, turn it around to see what is on the other side.

Embryogenesis is an unusual book in that it brings together a highly illustrated, practical embryology book in simple language, perfect for health practitioners, with a fascinating read on the history and philosophy of biological science. It discusses the various stages of embryonic development (meiosis, fertilization, blastula development, and gastrulation, and then the embryology of each of the human organs and organ systems in detail). It puts each of them in context, both in terms of its phylogeny: the evolutionary trajectory of cell-organized systems on Earth, and its ontogeny: the formation of individual

organisms in the modern world. There are 24 color plates, many of them commissioned uniquely for this volume, and several hundred black and white illustrations. The book is 950 pages hardcover, 8-1/2 by 10. Chapters include: The Original Earth; The Materials of Life; The First Beings; The Cell; The Genetic Code; Sperm and Egg; Fertilization; The Blastula; Gastrulation; Morphogenesis; Biological Fields; Chaos, Fractals, and Deep Structure; Ontogeny and Phylogeny; and Biotechnology. The Origin of the Nervous System; The Evolution of Intelligence; Neurulation and the Human Brain; Organogenesis; The Musculoskeletal and Hematopoietic Systems; Mind; The Origin of Sexuality and Gender. What is Media Archaeology? Cambridge University Press

This is the first book-length study of William James' style, arguing that the manner in which James writes *The Principles of Psychology* and *The Varieties of Religious Experience* serves to construct a chaotic world for his readers. The book examines the uses of chaos in western literature and philosophy and reaches two conclusions: that chaos may be "utter confusion and disorder," but, paradoxically, that disorder is communicated through some particular order -- in Joyce's term, all chaos is "chaosmos." Secondly, what is essential about chaos is what it does: nothing is inherently chaotic, rather chaos is used to contrast with or challenge something that is more structured or formed. Finally, the author presents an examination of the religious function of James' chaotic worldview as a disorientation which orients.
