R. F. Keating, Michael Moorcock and Amy Myers. Almost all the stories here are specially written; the cases presented in the order in which Holmes solved them. The result is a new life of Sherlock Holmes, with a continuous narrative alongside the stories that identifies the 'gaps' in the canon and places the new and hitherto unrecorded cases in sequence. Plus an invaluable complete Holmes chronology.

The eruption of the anti-Assad revolution in Syria has had many unintended consequences, among which is the opportunity it offered Sunni jihadists to establish a foothold in the heart of the Middle East. That Syria's ongoing civil war is so brutal and protracted has only compounded the situation, as have developments in Iraq and Lebanon. Ranging across the battlefields and international borders have been dozens of jihadi Islamist fighting groups, of which some coalesced into significant factions such as Jabhat al Nusra and the Islamic State. This book assesses and explains the emergence since 2011 of Sunni jihadist organisations in Syria's fledgling insurgency, charts their evolution and situates them within the global Islamist project. Unprecedented numbers of foreign fighters have joined such groups, who will almost certainly continue to host them. Thus, external factors in their emergence are scrutinised, including the strategic and tactical lessons learned from other jihadist conflict zones and the complex interplay between Al-Qaeda and the Islamic State and how it has influenced the jihadist sphere in Syria.Tensions between and conflict within such groups also feature in this indispensable volume.

The Subject Electrical Design Estimating And Costing Covers An Important Functional Area Of An Electrical Diploma Holder. The Subject Is Taught In Various Forms In Different States. In Some States, It Is Covered Under Two Subjects, Namely, Electrical Design & Drawing And Electrical Estimating & Costing. In Some States It Is Taught As An Integrated Subject But Is Split Into Two Or Three Parts To Be Taught In Different Semesters.To Cater To The Needs Of Polytechnics Of Different States, The Content Of The Course Has Been Developed By Consulting The Curricula Of Various State Boards Of Technical Education In The Country. In Addition To Inclusion Of Conventional Topics, A Chapter On Motor Control Circuits Has Been Included In This Book. This Topic Is Of Direct Relevance To The Needs Of Industries And, As Such, Finds Prominent Place In The Curricula Of Most Of The States Of India. The Book Covers Topics Like Symbols And Standards, Design Of Light And Fan Circuits, Alarm Circuits, Panel Boards Etc. Design Of Electrical Installations For Residential And Commercial Buildings As Well As Small Industries Has Been Dealt With In Detail. In Addition, Design Of Overhead And Underground Transmission And Distribution Lines, Sub-Station And Design Of Illumination Schemes Have Also Been Included.The Book Contains A Chapter On Motor Circuit Design And A Chapter On Design Of Small Transformers And Chokes. The Book Contains Theoretical Explanations Wherever Required. A Large Number Of Solved Examples Have Been Given To Help Students Understand The Subject Better. The Authors Have Built Up The Course From Simple To Complex And From Known To Unknown. Examples Have Generally Been Taken From Practical Situations. Indeed, Students Will Find This Book Useful Not Only For Passing Examinations But Even More During Their Professional Career.

What happened at 10 Rillington Place was so shocking and gruesome that even today everyone over a certain age still remembers the case with a shudder. In 1950, Timothy Evans was hanged for the violent murder of his baby daughter; he was also assumed to have murdered his wife. Then, less than three years later, another tenant, John Christie, was found to have killed at least six women, hiding their bodies in the garden, under floorboards and in a concealed kitchen alcove. Christie followed Evans to the gallows. It seemed unlikely that two murderers were living at 10 Rillington Place, and the evidence that emerged in the Christie case eventually led to Evans receiving a pardon. But there was also circumstantial evidence that Evans had

indeed killed his wife and child. Crime student Edna Gammon firmly believes that Evans was guilty. In A House To Remember, she explains why.

This book introduces a dynamic perspective to study white-collar crime. It argues that as personal motives change over time, so too do organizational opportunities, and willingness for deviant behavior. The work contends that the extent of white-collar crime is dependent on the extent of crime convenience perceived and preferred by potential offenders. It discusses how potential white-collar offenders expand organizational opportunities for financial crime over time. The dynamics are illustrated here by system dynamics models to capture cause and effect relationships. The book also presents a new structural model illustrating the elements of convenience theory along with a new dynamic model illustrating the evolution of white-collar crime. The practical aspects are illustrated with a number of case studies. The book will be of interest to researchers, academics and professionals working in the areas of Criminal Justice, Criminology, Criminal Law and Business Studies.

Kevin Lister's Teach Like You Imagined It: Finding the right balance shares a wealth of tools, ideas and encouragement to help teachers manage the conflicting pressures of teaching and become the educators they imagined. Teaching is an incredible profession, but it also comes with a potentially toxic workload. You do not have to put up with burn-out, however and one way to avoid it is to return to how you imagined teaching to be in the first place. Before you became a teacher, you pictured yourself as a teacher; in your imagination you almost certainly saw yourself as happy, efficient and able to manage your worklife balance effectively. Yet chances are that the reality of teaching is a little different, and it is this disconnect that can give rise to stress, anxiety and frustration. But what if you could use simple strategies to get a handle on your schedule and take control of your workload? Covering lesson planning, behaviour management, the streamlining of marking and getting the best out of CPD, Kevin Lister has drawn on his background in engineering to fill this book with trusted techniques and savvy suggestions to help you maximise your productivity and teach like you imagined it. Each chapter examines a different aspect of the day-to-day reality of teaching and suggests alternative, practical ways to look at or approach common tasks. Throughout the book Kevin touches on topics such as time management, prioritisation, educational research, leadership, psychology and other diverse concepts that his personal experiences and education have led him to explore. After each area of discussion there are prompts for action, where Kevin asks you to reflect on your working habits, question your practices and decide what you will do in response. Suitable for both new and experienced teachers looking to boost their day-to-day efficiency and find the right balance.

Industrial use of the brushless servomotor, for instance in robotics, is increasing rapidly, because of their low maintenance needs and capabilities at high transient speeds. They offer flexibility and high performance, and advances in power electronics and microelectronics means they are now more affordable. This handbook gives the user of brushless servomotors a comprehensive guide to their use, including a description of all main features of the brushless motor drive system. Throughout mathematics is kept to a minimum and practical guidance is given based on real-life experience. Peter Moreton is a Research Fellow at the University of Bristol, having spent time in industry and universities worldwide. Written by a respected expert in the field - Peter Moreton has both high level academic and industrial experience Indispensible guide to a rapidly growing new area of technology Concise and accessible with a minimum of maths

The Choreography of Antony Tudor: Focus on Four Ballets presents both an analytical overview of the ballets created for the stage by Antony Tudor and an in-depth critical analysis of four key works: Jardin aux Lilas (1936), Dark Elegies (1937), Pillar of Fire (1942), and The Leaves Are Fading (1975). Tudor was a British choreographer who spent a large part of his working life in the United States, and although he was not prolific in his output, his works include several masterpieces of twentieth-century ballet repertoire. Characteristic of his work is an exceptionally creative and

sensitive relationship of choreography with music, a relationship different from that developed by his equally musical contemporary, George Balanchine, in that it privileges subtle layers of dramatic, often psychological, exposition as well as complex mythmical structures. Tudor's ballets invariably involve a psychological human dimension, even when there is no story as such, and it is these two strands - the musical and the dramatic - that the choreographer exploits with consummate skill in the best of his work.

Three practicing managers with years of experience improving production facilities around the world explain why lean methodology on its own often fails to deliver productivity gains and how a holistic package incorporating safety, employee development, business planning, capital spending, performance management, quality and lean work can together to deliver results. Improving productivity is the holy grail of every site manager. But while three decades of initiatives from Kaizen through TQM to Lean/Six Sigma have all had an impact, the fact remains that a few companies outperform the others. This is often because individual change initiatives address only one aspect of a much more complex problem. What is needed is a holistic productivity system that addresses every aspect of production. To implement a productivity system in practice, you need more than TQM, more than Lean. Based on their experience managing and improving production facilities around the world the authors show how there are seven key elements that combine to create a sustainable productivity system. Leading Beyond Lean explains how these seven elements work together, and how you can set up your own bespoke productivity system, like they did. As practising managers Østbø, Wetherill and Cattermole have used these techniques and procedures to deliver improvements in both in safety and productivity. Helping their sites to become more economically viable, evolving from "problem sites" with uncertain futures into vibrant sites that attract reinvestment and growth. They become cleaner, safer and better organised, and therefore more attractive places to work in. This book will help any company, any site manager, and any production director understand what is needed to set up a lasting productivity system, not in theory, but in practice - and to deliver outstanding results.
