As straightforward as its title, How to Build Social Science Theories sidesteps the well-traveled road of theoretical examination by demonstrating how new theories originate and how they are elaborated. Essential reading for students of social science research, this book traces theories from their most rudimentary building blocks (terminology and definitions) through multivariable theoretical statements, models, the role of creativity in theory building, and how theories are used and evaluated. Authors Pamela J. Shoemaker, James William Tankard, Jr., and Dominic L. Lasorsa intend to improve research in many areas of the social sciences by making research more theory-based and theory-oriented. The book begins with a discussion of concepts and their theoretical and operational definitions. It then proceeds to theoretical statements, including hypotheses, assumptions, and propositions. Theoretical statements need theoretical linkages and operational linkages; this discussion

begins with bivariate relationships, as well as three-variable, four-variable, and further multivariate relationships. The authors also devote chapters to the creative component of theory-building and how to evaluate theories.

This book analyzes the family and residential trajectories of men and women across the twentieth century, which are placed in a long-term generational perspective and in the historical context where they played out. It brings together a set of studies based on data from the Biographies et Entourage (Life Event Histories and Entourage) survey conducted by the Institut National d'Etudes Démographiques (INED) on a representative sample of nearly 3,000 residents of the Paris region born between 1930 and 1950. Inside, readers will discover an insightful analysis of the family that moves away from such traditional concepts as the household or main residence and proposes new ones like the entourage and the residential system. This innovative approach to the family network describes an affective and residential proximity that takes into account the relatives and close friends who have played or continue to play a role in an individual's life. The book first presents a detailed analysis of the Biographies et Entourage survey respondents' parental universe and proposes a practical approach to the notion of parenthood that reveals the family and non-family resources available to individuals. Next, it describes the evolution of the respondents' family networks, both in and beyond the household, and details how these family circles shape their subjective judgments

during childhood, adolescence, and adult life. Coverage then goes on to examine the family ties of older adults, the role of grandparents and step-families, the importance of family spaces including often frequented places, and inter-generational family solidarity. Families extend well beyond the walls of the home. Interpersonal relations are constructed throughout the life course and in all the settings where they play out. This book takes this new family reality into account and traces its dynamics across time and space. It provides essential tools for researchers looking to conduct life event history surveys and to develop innovative areas of research in the social sciences.

The Power of Place (RLE Social & Cultural Geography) SAGE

The philosophy of the social sciences considers the underlying explanatory powers of the social (or human) sciences, such as history, economics, anthropology, politics, and sociology. The type of questions covered includes the methodological (the nature of observations, laws, theories, and explanations) to the ontological — whether or not these sciences can explain human nature in a way consistent with common-sense beliefs. This Handbook is a major, comprehensive look at the key ideas in the field, is guided by several principles. The first is that the philosophy of social science should be closely connected to, and informed by, developments in the sciences themselves. The second is that the volume should appeal to practicing social scientists as well as philosophers, with the contributors being both drawn from both ranks, and speaking to ongoing controversial issues in the field. Finally, the volume promotes connections across the social sciences, with greater internal discussion and interaction across

disciplinary boundaries.

The Meaning of Social Science New

Saraswati House India Pvt Ltd

How the NSF became an important yet controversial patron for the social sciences, influencing debates over their scientific status and social relevance. In the early Cold War years, the U.S. government established the National Science Foundation (NSF), a civilian agency that soon became widely known for its dedication to supporting first-rate science. The agency's 1950 enabling legislation made no mention of the social sciences, although it included a vague reference to "other sciences."

Nevertheless, as Mark Solovey shows in this book, the NSF also soon became a major--albeit controversial--source of public funding for them.

Social Construction in Context SAGE Publications

First published in 1986, Social Science and Social Policy addresses major questions concerned with the social utility of social science. The book is divided into four parts. The first part considers the place of social science in the policy-making process and criticizes the rational model which gives a central place to analysis. In part two, five different methodologies for policy research are considered: the use of continuous surveys, public opinion polls, social indicators, evaluation research and social experimentations and the use of qualitative methods. The advantages and drawbacks of each are considered with extensive use of examples. In the third part, the role of theory is examined. Particular attention is paid to the issue of health inequality. In part four, general questions are raised about the use and abuse of social science, including

questions about how it can be most effectively disseminated to make maximum impact. The book is aimed at a general readership and requires no special methodological expertise. It will appeal particularly to undergraduates and graduate students taking courses in social policy, public policy applied sociology and a range of applied social sciences such as criminology, health studies, education and social work.

Tackling Long-Term Global Energy

Problems University of Chicago Press

Public division is not new; in fact, it is the lifeblood of politics, and political representatives have constructed divisions throughout history to mobilize constituencies. Since the turn of the twenty-first century, the idea of a divided United States has become commonplace. In the wake of the 2020 election, some commentators warned that the American public was the most divided it has been since the Civil War. Political scientists, political theorists, and public intellectuals have suggested that uninformed, misinformed, and disinformed voters are at the root of this division. Some are simply unwilling to accept facts or science, which makes them easy targets for elite manipulation. It also creates a grass-roots political culture that discourages cross-partisan collaboration in Washington. Yet, manipulation of voters is not as grave a threat to democracy in America as many scholars and pundits make it out to be. The greater threat comes from a picture that partisans use to rally their supporters: that of an America sorted into opposing camps so deeply rooted that they cannot be shaken loose and remade. Making Constituencies proposes a new theory of representation as mobilization to argue that divisions like these are not inherent in society, but created, and political representatives of all kinds forge and deploy them to cultivate constituencies.
