The length of time
Canadians can expect
to live has been
extended by some 20
years in the last

century, and continues
to lengthen. As we live
longer into old age,
and as the generation
born in the wake of
World War II (known as
the baby boomers)
moves into retirement,
we face new options
and new challenges.
This short, accessible

book brings together what we know about the changes taking place, as well as what can be predicted; much remains uncharted territory. Regions Apart BRILL Research on the family has expanded considerably across Asia but studies tend to be fragmented, focusing on narrow issues within limited areas (cities, towns, small communities) and may not be accessible to international readers. These limitations make it difficult for researchers, students, policy makers, and practitioners to obtain the information they need. The Routledge Handbook of Families in Asia fills that gap by providing a current and comprehensive analysis of Asian

families by a wide range of experts in a single publication. The thirty-two chapters of this comparative and multi-disciplinary volume are organized into nine major themes: conceptual approaches, methodological issues, family life in the context of culture, family relationships across the family life cycle, issues of work and income, stress and conflict, family diversity, family policy and laws, and environmental setting of homes. Each chapter examines family life across Asian countries, studying cultural similarities and differences and exploring how families are changing and what trends are likely to develop in the future. To provide a fruitful

learning experience for the reader, each chapter offers examples, relevant data, and a comprehensive list of references. Offering a complete interdisciplinary overview of families in Asia, the Handbook will be of interest to students, academics, policy makers and practitioners across the disciplines of Asian Studies, Sociology, Demography, Social Work, Law, Social Policy, Anthropology, Geography, Public Health and Architecture.

This is a core text for courses in social problems. Using a strong Canadian perspective, it examines the social dynamics and

consequences of social problems (such as unemployment, poverty, global inequality) through the lens of the main sociological paradigms. It takes a broad approach and examines the social construction of social problems and the impact of social problems on individual and societal health. Possible solutions for individuals and society at large are examined. Principles of Sociology OUP Canada
Deviance, Crime, and Control: Beyond the Straight and Narrow, second edition, assumes that deviance is normal behaviour and conformity is socially constructed. The 'discovery' of deviant behaviour indicates society's degree of cohesion,

tolerance, and control over individuals. The benchmarks for what constitutes 'deviance' are in a constant state of change. This book studies contemporary notions and forms of deviance and control against the backdrop of history. In addition, the author takes a multi-paradigm approach and discusses deviance and conformity from functionalist, conflict, social constructionist/symbolic interactionist, feminist, and postmodern perspectives. Using health and well-being as a measure of tight social control, this text focuses on the outcomes of deviance. Emphasizing the need to find new solutions to social problems, Deviance, Crime, and

Control provides students with a fresh perspective. *Routledge Handbook of Families in Asia* Oxford University Press, USA Series: a href="http://www.oup.com/tcs/"Themes in Canadian Sociology/aThe only Canadian text to examine the intersection of technology and society through theories and real-world examples. This fully updated third edition examines the places where technology and society intersect, connecting the reality of our technological age to issues of social networks, communication, identity, power, and inequality. The result is a comprehensive overview of the technological tools we

use, where they come from, and how they are changing our perceptions of ourselves and the relationships we form.

In their highly readable overview, authors Lorne Tepperman and Nina Gheihman look to the social inequalities that arise from class, gender, race, ethnicity, age, and sexual orientation. Technology and

Gambling is a huge business in Canada, producing vast revenue for industry investors. Yet for hundreds of thousands of Canadians, gambling is a costly and consuming addiction. The gambling industry, and the government regulators who oversee it, insist that gambling problems are simply personal problems. However, many public

health experts believe that gambling is an addiction. This book considers the many new ways that are available to gamble; outlines the history of gambling in Canada; frames gambling as a public health issue; and, drawing on the most recent data available, evaluates the current discussion around regulation. *Sociology* Routledge This ground-breaking book provides the clearest, most comprehensive examination of consumerism and consumer behaviour currently available. Taking an interdisciplinary and intersectional approach and drawing on insights from a wide range of fields, including sociology, psychology, market

research, economics, history, and philosophy, the authors consider the origins, current state, and possible future of today's consumer society. Lucid, extensively researched, and carefully crafted, *Consumer Society* is an indispensable introduction to the fundamental concepts and issues that shape the world we live in. Key topics covered in *Consumer Society* include: The agents of socialization that introduce individuals to their roles in such a society—parents and other family members, the education system, and the media (including the art, science, and business of advertising) The growing power of brands in today's

consumer society
Social categories and the consumer behaviours associated with them, including wealthy people and low-income people; men and women; young people and seniors; immigrants and inhabitants of the Global South. Emerging issues in consumer behaviour and the sociology of consumerism, including bending and breaking the rules of the consumer society; buying as a means of social protest; and the future of the consumer society in the face of such challenges as growing inequality, climate change, and resource depletion. A variety of learning resources add value and perspective, including self-tests, lists of key terms,

discussion questions, and suggestions for further reading at the end of each chapter.

Picturing Society

Don Mills, Ont. : Oxford University Press

Are human beings a species in constant need of firm, aggressive government to save us from ourselves? Or are we fundamentally sociable beings, woven together in a complex array of networks, interdependent and willing to work together? The Sense of Sociability is a modern, highly readable, and often idiosyncratic look at human sociability by one of Canada's top sociologists. Lorne Tepperman explores why we have difficulty getting along, and why in spite of these difficulties we still

manage for the most part to live together. Without interference from poor government and other malign influences, he argues, people can work out a great deal of their lives themselves.

Tepperman, one of Canada's foremost sociologists, sees it as his job to look at our "unwashed" history to reveal how ordinary people doing ordinary things is the process that makes human history.

Regions Apart: The Four Societies of Canada and the United States provides an invaluable social, cultural, and political comparison of the two countries that share

the world's longest undefended border. General readers and students alike will find *Regions Apart* an insightful analysis of how and why Americans and Canadians differ, not only from each other but from region to region within each country. Recognizing the inevitability of the comparison - at least for Canadians! - the authors explore the myths about the historical development of the two nations and provide their own thought-provoking interpretation. They argue that the original American colonies and English Canada were very similar societies and that the differences that emerged as the countries developed resulted not simply

because of the rupture caused by the American Revolution, but because of internal divisions in each country - between English and French Canada and between the American North

and South - that set the two nations on different paths. The Wynford edition includes a new introduction by Edward Grabb bringing this groundbreaking study fully up to date.
