This revised introduction to Britain in the first millennium BC incorporates modifications to a story that is still controversial. It covers a time of dramatic change in Europe, dominated by the emergence of Rome as a megastate. In Britain, on the extremity of these developments, it was a period of profound social and economic change, which saw the end of the prehistoric cycle of the Neolithic and bronze Ages, and the beginning of a world that was to change little in its essentials until the great voyages of

colonization and trade of the 16th century. The theme of the book is that of social change within an insular society sitting on the periphery of a world in revolution.

The Mediterranean's Iron Age period was one of its most dynamic eras. Stimulated by the movement of individuals and groups on an unprecedented scale, the first half of the first millennium BCE witnesses the development of Mediterranean-wide practices, including related writing systems, common features of urbanism, and shared artistic styles and techniques, alongside the evolution of wide-scale trade. Together, these created an engaged, interlinked and interactive Mediterranean. We can recognise this as the Mediterranean's first truly globalising era. This volume introduces students and scholars to contemporary evidence and theories surrounding the Mediterranean from the eleventh century until the end of the seventh century BCE to enable an integrated understanding of the multicultural and socially

complex nature of this incredibly vibrant period.

British Iron Age swords and scabbards are here catalogued in detail for the first time. They are grouped on the basis of typologies of components and are discussed with special reference to their decoration, context and chronology. Artefact studies have been neglected for many years, and this subject was last tackled in a paper published in 1950. Since then, the material available for study has tripled, from 93 to 274 items, and new archaeological discoveries include several elaborately decorated scabbards. Illustrations include 71 full pages of line drawings, while additional contributions examine the technology of some of the swords and provide a discussion of their enamelled decoration. Contents: Introduction; Typology and terminology; Group A: Swords of medium length and scabbards with open chape ends; Group B: Swords of medium length and scabbards with closed chape ends; Group C: Long swords and scabbards with campanulate mouths; Group D: Long swords and scabbards with straight mouths; Group E: Earlier swords and scabbards in the north; Group F: Later swords and scabbards in the north; Group G: Short swords in the south and the north; Group H: Swords and scabbards of mixed traditions; Discussion; Appendices; The technology of some of the swords; Weapons and fittings with enamelled decoration; The Isleworth sword: a note on the brass foils; A technical report on the Orton Meadows scabbard; The scientific examination of the Asby Scar sword and scabbard; The extraction of swords from their scabbards; Catalogue; Bibliography.

Although the last two generations have seen an enormous amount of attention paid to advances in electronics, the fact remains that high-income, high-energy societies could thrive without microchips, etc., but, by contrast, could not exist without steel. Because of the importance of this material to contemporary civilization, a comprehensive resource is needed for metallurgists, non-metallurgists, and anyone with a background in environmental studies, industry, manufacturing, and history, seeking a broader understanding of the history of iron and steel and its current and future impact on society. Given its coverage of the history of iron and steel from its genesis to slow pre-industrial progress, revolutionary advances during the 19th century, magnification of 19th century advances during the past five generations, patterns of modern steel production, the ubiquitous uses of the material, potential substitutions, advances in relative dematerialization, and appraisal of steel's possible futures, *Still the Iron Age: Iron and Steel in the Modern World* by world-renowned author Vaclav Smil meets that need.

Incorporates an interdisciplinary discussion of the history and evolution of the iron- and steel-making industry and its impact on the development of the modern world Serves as a valuable contribution because of its unique perspective that compares steel to technological advances in other materials, perceived to

be important Discusses how we can manufacture smarter rather than deny demand Explores future opportunities and new efforts for sustainable development in the industry

"The advance in knowledge of the archaeology of the Iron Age in Africa during the last twenty years is one of the most significant developments of archaeology anywhere. Going hand in hand with new historical research there is now a large and growing body of information on the subject. This book endeavours to give in concise but accurate form a summary of what is known. The authors, most of whom are still actively at work in the field, are all authorities in their own areas and several of them have been pioneers in developing archaeology in Africa. It is hoped that the book may prove of use to nonspecialists who would like to know of recent developments as well as to the growing number of students of the subject"--

Find out all about the first Britons, nomadic hunter-gatherers who came from mainland Europe to settle in England bringing wooden spears, flint handaxes and animals with them. Stone Age to Iron Age tells the story of how these people settled and began farming the land. They built villages of timber and stone houses such as Skara Brae on Orkney. Stonehenge is perhaps the most famous monument of this period, a technological marvel of the time built by raising over 80 blue stones to create the 'henge'. The Bronze Age brought with it metalworking using copper, tin and gold to make tools and beautiful everyday objects. The Iron Age was known for its hill forts, farming and art and culture. Contains maps, paintings, artefacts and photographs to show

how early Britons lived. Ideally suited for readers age 8+ or teachers who are looking for books to support the new curriculum for 2014.

Excerpt from *The World's Iron Age* But I did not leave the Iron Age behind when I quit Russia. Germany, which I had known and loved when it was a free country, was already in the grip of a more formidable and efficient dictatorship than the one with which I was familiar in Russia. My next place of residence was Japan and at first that old and physically very beautiful country was extremely relaxing after the grim strain of Russia. But the Iron Age came in full rigor to Asia when Japan, led on by the logic

of conquest, pushed forward on the mainland of Asia and China, responding to the equally irresistible impulse of newborn nationalism, resisted. Nobel Laureate and two-time Booker prize-winning author of *Disgrace* and *The Life and Times of Michael K*, J. M. Coetzee tells the remarkable story of a nation gripped in brutal apartheid in his Sunday Express Book of the Year award-winner *Age of Iron*. In Cape Town, South Africa, an elderly classics professor writes a letter to her distant daughter, recounting the strange and disturbing events of her dying days. She has been opposed to the lies and the brutality of apartheid all her life, but now she finds herself coming face to face with its true horrors: the hounding by the police of her servant's son, the burning of a nearby black township, the murder by security forces of a teenage activist who seeks refuge in her house. Through it all, her only companion, the only person to whom she can confess her mounting anger and despair, is a homeless man who one day appears on her doorstep. In *Age of Iron*, J. M. Coetzee brings his searing insight

and masterful control of language to bear on one of the darkest episodes of our times. 'Quite simply a magnificent and unforgettable work' Daily Telegraph 'A superbly realized novel whose truth cuts to the bone' The New York Times 'A remarkable work by a brilliant writer' Wall Street Journal South African author J. M. Coetzee was awarded the Nobel Prize for Literature in 2003 and was the first author to win the Booker Prize twice for his novels *Disgrace* and *The Life and Times of Michael K*. His novel, *Foe*, an exquisite reinvention of the story of Robinson Crusoe is also available in Penguin paperback.

The Cambridge Prehistory of the Bronze and Iron Age Mediterranean offers new insights into the material and social practices of many different Mediterranean peoples during the Bronze and Iron Ages, presenting in particular those features that both connect and distinguish them. Contributors discuss in depth a range of topics that motivate and structure Mediterranean

archaeology today, including insularity and connectivity; mobility, migration, and colonization; hybridization and cultural encounters; materiality, memory, and identity; community and household; life and death; and ritual and ideology. The volume's broad coverage of different approaches and contemporary archaeological practices will help practitioners of Mediterranean archaeology to move the subject forward in new and dynamic ways. Together, the essays in this volume shed new light on the people, ideas, and materials that make up the world of Mediterranean archaeology today, beyond the borders that separate Europe, Africa, and the Middle East.

Israel's Iron Age Routledge

Alternative Iron Ages examines Iron Age social formations that sit outside traditional paradigms, developing methods for archaeological characterisation of alternative models of society. In so doing it contributes to the debates concerning the construction and resistance of inequality taking place in archaeology, anthropology and sociology. In recent years, Iron Age research on Western Europe has moved towards new forms of understanding social structures. Yet these alternative social organisations continue to be considered as basic human social formations, which frequently imply marginality and primitivism. In this context, the grand narrative of the European Iron Age continues to be defined by cultural foci, which hide the great regional variety in an artificially homogenous area. This book challenges the traditional classical evolutionist narratives by exploring concepts such as non-triangular societies, heterarchy and segmentarity across regional case studies to test and propose alternative social models for Iron Age social formations.

Constructing new social theory both archaeologically based and supported by sociological and anthropological theory, the book is perfect for those looking to examine and understand life in the European Iron Age. The Iron Age Production Manual Bbc Publications

This ambitious study documents the underlying features which link the civilizations of the Mediterranean - Phoenician, Greek, Etruscan and Roman - and the Iron Age cultures of central Europe, traditionally associated with the Celts. It deals with the social, economic and cultural interaction in the first millennium BC which culminated in the Roman Empire. The book has three principle themes: the spread of iron-working from its origins in Anatolia to its adoption over most of Europe; the development of a trading system throughout the Mediterrean world after the collapse of Mycenaean Greece and its spread into temperate Europe; and the rise of ever more complex societies, including states and cities, and eventually empires. Dr Collis takes a new look at such key concepts as population movement, diffusion, trade, social structure and spatial organization, with some challenging new views on the Celts in particular.

The European Iron Age Routledge

The Iron Age is the period generally occurring after the Bronze Age, marked by the prevalent use of iron. Iron production is known to have taken place in Anatolia at least as early as 1200

BC, with some contemporary archaeological evidence pointing to earlier dates. The early period of the age is characterized by the widespread use of iron or steel. The adoption of these materials coincided with other changes in society, including differing agricultural practices, religious beliefs and artistic styles. The Iron Age as an archaeological term indicates the condition as to civilization and culture of a people using iron as the material for their cutting tools and weapons. The Iron Age is the third principal period of the three-age system created by Christian Thomsen (1788-1865) for classifying ancient societies and prehistoric stages of progress. This book discusses the latest information on the iron age.
