Introduction À La Science de l'Histoire Ou Science Du Développement de l'Humanité Srpska akademija nauka i umetnosti

Revolution and the Republic provides a new and wide-ranging interpretation of political thought in France from the eighteenth century to the present day. At its heart are the dramatic and violent events associated with the French Revolution of 1789 and the birth of the First Republic in 1792. For the next two centuries, writers in France struggled to make sense of these and subsequent events in French revolutionary history, producing a rich and perceptive analysis of the nature of republican government. But, as Revolution and the Republic shows, these important debates were not limited to the narrow confines of politics and to the writing of constitutions. Such was their significance that they occupied a central place in discussions about religion, science, philosophy, commerce, and the writing of history. They also shaped arguments about the character of France and the French nation as well as polemics about the role of intellectuals in French society. Moreover, they continue to be of importance in France today as the country faces the challenges posed by globalisation, multiculturalism, and the reform of the welfare state. Integrating the perspectives of intellectual history, political theory, social and cultural history, and political economy, Jeremy Jennings has written a study of political ideas that appeals to all those interested in the history of modern France and Europe more generally.

A History of Philosophy: History of modern philosophy Cambridge University Press

The prevailing assumption has been that French ethnographers highlighted the cultural and social environment while anthropologists emphasized the scientific study of head and body shapes. Martin Staum shows that the temptation to gravitate towards one pole of the nature-nurture continuum often resulted in reluctant concessions to the other side. Psychologists Théodule Ribot and Alfred Binet, for example, were forced to recognize the importance of social factors. Non-Durkheimian sociologists were divided on the issue of race and gender as progressive and tolerant attitudes on race did not necessarily correlate with flexible attitudes on gender. Recognizing this allows Staum to raise questions about the theory of the equivalence of all marginalized groups. Anthropological institutions re-organized before the First World War sometimes showed decreasing confidence in racial theory but failed to abandon it completely. Staum's chilling epilogue discusses how the persistent legacy of such theories was used by extremist anthropologists outside the mainstream to deploy racial ideology as a basis of persecution in the Vichy era.

Feeding France is the first comprehensive study of the French food industry in the decades surrounding the French Revolution of 1789. Though the history of gastronomy and the restaurant have been explored by scholars, few are aware that France was also one of the first nations to produce industrial foods. In this time of political and social upheaval, chemists managed to succeed both as public food experts and as industrial food manufacturers. This book explores the intersection between knowledge, practice and commerce which made this new food expertise possible, and the institutional and experimental culture which housed it. Ranging from the exigencies of Old Regime bread-making to the industrial showcasing of gelatine manufacture, Emma Spary rewrites the history of the French relationship with food to show that industrialisation and patrimonialism were intimately intertwined.

The Foreign Quarterly Review FeniXX

One of Hegel's most controversial and confounding claims is that "the real is rational and the rational is real." In this book, one of the world's leading scholars of Hegel, Jean-François Kervégan, offers a thorough analysis and explanation of that claim, along the way delivering a compelling account of modern social, political, and ethical life. Kervégan begins with Hegel's term "objective

spirit," the public manifestation of our deepest commitments, the binding norms that shape our existence as subjects and agents. He examines objective spirit in three realms: the notion of right, the theory of society, and the state. In conversation with Tocqueville and other theorists of democracy, whether in the Anglophone world or in Europe, Kervégan shows how Hegel—often associated with grand metaphysical ideas—actually had a specific conception of civil society and the state. In Hegel's view, public institutions represent the fulfillment of deep subjective needs—and in that sense, demonstrate that the real is the rational, because what surrounds us is the product of our collective mindedness. This groundbreaking analysis will guide the study of Hegel and nineteenth-century political thought for years to come.

Includes subject section, name section, and 1968-1970, technical reports.

A History of Philosophy McGill-Queen's Press - MQUP

This history of metaphysics respects both the analytic and Continental schools while also transcending the theoretical limitations of each. The book provides an overview restoring the value of metaphysics to contemporary audiences.

A History of Philosophy, from Thales to the Present Time

The initial goal of this book was to discover the ultimate purpose and meaning behind the abductions of human beings into UFOs—the alarming reality of which is still hardly known to the public. But as this study developed, it led to a series of revelations which brought us to an unexpected interpretation of this phenomenon. Indeed, it became all too obvious that there was a connection between these abductions and the absurd path that today's human society is taking. More and more measures are being implemented that are threatening the health, well-being, and freedom of human beings the world over under the guise of 'security' purposes. Those responsible for this are not only our leaders, but occult forces—which are exposed in this book. We were therefore led to unveil what we can indeed refer to as the "greatest treachery in human history": extremely powerful dark forces have been acting on Earth for a very long time unbeknownst to our population. These forces, identified in this book, are directly interfering in the governance of our world and are directly opposed to the harmonious evolution of Humankind, putting us all in grave danger. This book sheds an unprecedented new light on how this all relates to the tragic events Humanity has been going through since 2020.
