The first definitive guide to understanding and profiting from the relationship between the stock market and interest rates It's well established that interest rates significantly impact the stock market. This is the first book that definitively explores the interest rate/stock market relationship and describes a specific system for profiting from the relationship. Timing the Market provides an historically proven system, rooted in fundamental economics, that allows investors and traders to forecast the stock market using data from the interest rate markets together with supporting market sentiment and cultural indicators to pinpoint and profit from major turns in the stock market. Deborah Weir (Greenwich, CT) is President of Wealth Strategies, a firm that does marketing for traditional money managers and hedge funds. She is a Chartered Financial Analyst and is the first woman president of the Stamford CFA Society.

The emerging field of prenatal gene therapy is founded on scientific and technical advances in fetal medicine, molecular biology and gene therapy. This preclinical research subject aims at applying gene therapy during pregnancy for the prevention of human diseases caused by early onset congenital or gestation related conditions. In Prenatal Gene Therapy: Concepts, Methods and Protocols, expert researchers in the field detail many of the protocols which are now commonly used to study gene therapy, fetal medicine and medical ethics. These include detailed protocols for vector production, for breeding and husbandry of the animal models, for the surgical procedures of gene delivery in large and small animals and for the methods of gene transfer analysis. Written in the highly successful Methods in Molecular Biology™ series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and key tips on troubleshooting and avoiding known pitfalls. Thorough and intuitive, Prenatal Gene Therapy: Concepts, Methods and Protocols seeks to aid scientists in the further study of prenatal disease and gene therapy projects beyond the scope of fetal medicine.

From Captain George Vancouver to Muriel "Curve of Time" Blanchet to Jim "Spilisbury's Coast" Spilisbury, visitors to Desolation Sound have left behind a trail of books endowing the area with a romantic aura that helps to make it British Columbia's most popular marine park. In this hilarious and captivating book, CBC personality Grant Lawrence adds a whole new chapter to the saga of this storied piece of BC coastline. Young Grant's father bought a piece of land next to the park in the 1970s, just in time to encounter the gun-toting cougar lady, left-over hippies, outlaw bikers and an assortment of other characters. In those years Desolation Sound was a place where going to the neighbours' potluck meant being met with hugs from portly naked hippies and where Russell the Hermit's school of life (boating, fishing, and rock 'n' roll) was Grant's personal Enlightenment—an influence that would take him away from the coast to a life of music and journalism and eventually back again. With rock band buddies and a few cases of beer in tow, an older, cooler Grant returns to regale us with tales of "going bush," the tempting dilemma of finding an unguarded grow-op, and his awkward struggle to convince a couple of visiting kayakers that he's a legit CBC radio host while sporting a wild beard and body wounds and gesticulating with a machete. With plenty of laugh-out-loud humour and inspired reverence, Adventures in Solitude delights us with the unique history of a place and the growth of a young man amidst the magic of Desolation Sound.

'One of the best accounts ever written of deep-water diving and its staggering, haunting dangers' Robert Kurson, New York Times bestselling author of Shadow Divers Deep underwater lurks a mysterious man-made illness. It has gone by many names over the years - Satan's disease, diver's palsy, the chokes - but today, medics call it decompression sickness. You know it as the bends. That's the devil British diver Martin Robson faces each time

he plunges beneath the surface. In the winter of 2012, Robson was part of an expedition to Blue Lake, southern Russia, which sought to find a submerged cave system never seen by the human eye. On the final day of the expedition, as Robson returned from diving deeper into the lake than anyone had before, disaster struck: just seventy-five feet down, he was ambushed by the bends. Robson knew that if he continued up to the surface he would probably die before help arrived. Instead, he sank back into the water, gambling on an underwater practice most doctors believe is a suicidal act. Soon the only hope he had of saving his life would rest in the hands of a dramatic mercy mission organised at the highest levels of the Russian government. Between the Devil and the Deep is the first book to tell the terrifying true story of what it feels like to get the bends, taking you inside the body and mind of a man who suffered the unthinkable. Writer Mark Cowan also explores the grimly fascinating history of decompression sickness, the science behind what causes the disease, and the stories of the forgotten divers who pushed the limits of physical endurance to help find a solution.

Delivering excellent service to all customers is the key imperative for many sustainable businesses. So why do so many supply chains struggle to fulfill customer requirements at competitive costs? The answer is simple: traditional supply chain planning, which was tailored to a predominantly stable and predictable business environment, cannot handle the new challenges in the world of variability, uncertainty, complexity, and ambiguity—the VUCA world. Companies can either accept the drawbacks that often result in high inventories, poor asset utilization, and unsatisfactory customer service or, they can change their view of the fundamental approach to supply chain management. LEAN Supply Chain Planning: The New Supply Chain Management Paradigm for Process Industries to Master Today's VUCA World introduces a new paradigm and a new approach to managing variability, uncertainty, and complexity in today's planning processes and systems. Introducing a cutting-edge supply chain management concept that addresses current problems in the process industry's supply chains, the book presents powerful methods developed by leading research institutes, process industry champions, and supply chain experts. It explains how readers can change their approach to the fundamental planning paradigms in a manner that will help their organizations achieve higher levels of responsiveness, improved levels of customer service, and substantial increases in cost-efficiencies. This holistic practitioner's guide describes how to establish the right accountabilities for performance management and also provides a set of meaningful metrics to help measure your progress. Supplying detailed guidelines for

transforming your supply chain, it includes first-hand reports of leading organizations that have already adopted some of the facets of this paradigm and used the relevant instruments to achieve unprecedented improvements to customer service, supply chain agility, and overall equipment effectiveness.

Unmanned aerial vehicles (UAV) have already become an affordable and cost-efficient tool to quickly map a targeted area for many emerging applications in the arena of ecological monitoring and biodiversity conservation. Managers, owners, companies, and scientists are using professional drones equipped with high-resolution visible, multispectral, or thermal cameras to assess the state of ecosystems, the effect of disturbances, or the dynamics and changes within biological communities inter alia. We are now at a tipping point on the use of drones for these type of applications over natural areas. UAV missions are increasing but most of them are testing applicability. It is time now to move to frequent revisiting missions, aiding in the retrieval of important biophysical parameters in ecosystems or mapping species distributions. This Special Issue shows UAV applications contributing to a better understanding of biodiversity and ecosystem status, threats, changes, and trends. It documents the enhancement of knowledge in ecological integrity parameters mapping, long-term ecological monitoring based on drones, mapping of alien species spread and distribution, upscaling ecological variables from drone to satellite images: methods and approaches, rapid risk and disturbance assessment using drones, mapping albedo with UAVs, wildlife tracking, bird colony and chimpanzee nest mapping, habitat mapping and monitoring, and a review on drones for conservation in protected areas.

Murder darkens the bright days of summer in an idyllic Suffolk village, in an Albert Campion mystery that is simply "unforgettable" (A.S. Byatt). Private detective Albert Campion's glorious summer in Pontisbright is blighted by death. Amidst the preparations for Minnie and Tonker Cassand's fabulous summer party, a murder is discovered—and it falls to Campion to unravel the intricate web of motives, suspicion and deception. Danger is hardly unknown in this idyllic rural village, but it is a less romantic peril than Campion faced on his first visit, more than twenty years ago . . .
