Our modern idea of what a healthy landscape looks like and how it functions is distorted by the fur trade that once trapped out millions of beavers from North America's lakes and rivers. Goldfarb shares the powerful story about one of the world's most influential species. He explains how North America was colonized, how our landscapes have changed over the centuries, and how beavers can help us fight drought, flooding, wildfire, extinction, and the ravages of climate change. -- adapted from jacket [Gattefosse's Aromatherapy](#) CRC Press

Here is the missing link in Essential Oil literature, the first modern work written by the man who coined the word 'Aromatherapy.' In July 1910 René- Maurice Gattefossé discovered the healing properties of lavender oil after severely burning his hands in a laboratory explosion. This led him into a lifetime of research into Essential Oils. His remarkable book was first published in 1937 and has been out of print for many years. Now translated, it has been edited by Robert Tisserand, author of three books on aromatherapy (including the best-seller, *The Art of Aromatherapy*), editorial adviser of the *Journal of Alternative and Complementary Medicine* and editor of *The International Journal of Aromatherapy*. The book is a fascinating blend of ancient and modern knowledge and aromatherapists will find it an essential tool of reference. Extensive notes are provided by Robert Tisserand at the back of the book. Chapters include those on human smells and animal smells, toxicity, the properties of essential oils and their constituents, the treatment of many diseases, and over fifty case studies from doctors.

This volume provides summarized scientific evidence of the different classes of plant-derived phytochemicals, their sources, chemical structures, anticancer properties, mechanisms of action, methods of extraction, and their applications in cancer therapy. It also discusses endophyte-derived compounds as chemopreventives to treat various cancer types. In addition, it provides detailed information on the enhanced production of therapeutically valuable anticancer metabolites using biotechnological interventions such as plant cell and tissue culture approaches, including in vitro-, hairy root- and cell-suspension culture; and metabolic engineering of biosynthetic pathways. *Anticancer Plants: Natural Products and Biotechnological Implements - Volume 2* explores the natural bioactive compounds isolated from plants as well as fungal endophytes, their chemistry, and preventive effects to reduce the risk of cancer. Moreover, it highlights the genomics/proteomics approaches and biotechnological implementations. Providing solutions to deal with the challenges involved in cancer therapy, the book benefits a wide range of readers including academics, students, and industrial experts working in the area of natural products, medicinal plant chemistry, pharmacology, and biotechnology.

This Special Issue is dedicated to recent advances in natural products chemistry related to metabolites and microbiomes. In the present Special Issue, the following topics have been covered:

- Isolation of novel microbial compounds using metabolomic approaches;
- Molecules and metabolomes related to agricultural applications (crop and animal productions);
- Microbiomes and related natural products with beneficial effects in agriculture;
- Plant metabolites with bioactive properties;
- Influence of beneficial microbes and/or their metabolites on plant metabolomes;
- Microbial metabolites involved in plant or animal interactions;
- Influence of production technologies on animal metabolomes and microbiomes.

Nanoemulsions: Formulation, Applications, and Characterization provides detailed information on the production, application and

characterization of food nanoemulsion as presented by experts who share a wealth of experience. Those involved in the nutraceutical, pharmaceutical and cosmetic industries will find this a useful reference as it addresses findings related to different preparation and formulation methods of nanoemulsions and their application in different fields and products. As the last decade has seen a major shift from conventional emulsification processes towards nanoemulsions that both increase the efficiency and stability of emulsions and improve targeted drug and nutraceutical delivery, this book is a timely resource. Summarizes general aspects of food nanoemulsions and their formulation Provides detailed information on the production, application, and characterization of food nanoemulsion Reveals the potential of nanoemulsions, as well as their novel applications in functional foods, nutraceutical products, delivery systems, and cosmetic formulations Explains preparation of nanoemulsions by both low- and high-energy methods

Egyptian hieroglyphs, Chinese scrolls, and Ayurvedic literature record physicians administering aromatic oils to their patients. Today society looks to science to document health choices and the oils do not disappoint. The growing body of evidence of their efficacy for more than just scenting a room underscores the need for production standards, quality control parameters for raw materials and finished products, and well-defined Good Manufacturing Practices. Edited by two renowned experts, the *Handbook of Essential Oils* covers all aspects of essential oils from chemistry, pharmacology, and biological activity, to production and trade, to uses and regulation. Bringing together significant research and market profiles, this comprehensive handbook provides a much-needed compilation of information related to the development, use, and marketing of essential oils, including their chemistry and biochemistry. A select group of authoritative experts explores the historical, biological, regulatory, and microbial aspects. This reference also covers sources, production, analysis, storage, and transport of oils as well as aromatherapy, pharmacology, toxicology, and metabolism. It includes discussions of biological activity testing, results of antimicrobial and antioxidant tests, and penetration-enhancing activities useful in drug delivery. New information on essential oils may lead to an increased understanding of their multidimensional uses and better, more ecologically friendly production methods. Reflecting the immense developments in scientific knowledge available on essential oils, this book brings multidisciplinary coverage of essential oils into one all-inclusive resource.

- The first book devoted exclusively to aromatic hydrosols--gentle, water-based plant extracts that expand the healing, cosmetic, and culinary applications of aromatherapy.
- The newest development in the field of aromatherapy.
- The homeopathic form of aromatic treatment that is the perfect complement to other forms of vibrational medicine.
- A comprehensive reference with more than 100 recipes and formulas for using hydrosols as well as sources of supply.
- With an introduction by Kurt Schnaubelt, author of *Advanced Aromatherapy and Medical Aromatherapy*. Hydrosols is one of the most anticipated books in the world of holistic health because it introduces a revolutionary new use of essential oils in aromatic treatment. Hydrosols, or hydrolates, are the pure, water-based solutions created when essential oils are steam distilled. Through this process, a potent, yet subtle form of medicine is created, one that is able to be ingested as well as applied directly to the skin, unlike most pure essential oils. In fact, hydrosols are considered the homeopathic version of aromatherapy, and as such are ideal for use with children, animals, and those with fragile immune systems. Suzanne Catty details the specifics of 67 hydrosols, provides formulas to treat more than 50 health concerns, and offers 40 delicious recipes in which hydrosols can be used. Her section on pets will help owners deal with urinary tract and digestive problems as well as grooming and odor issues. She also

shows how hydrosols can be used with other forms of vibrational medicine and with feng shui, geomancy, and dowsing.

This volume in the series is devoted to Africa, a continent that possesses a vast treasure of medicinal plants and has produced some exclusive materials for the world market. This volume is expected to strengthen the medicinal plant sector in African countries by making comprehensive information on medicinal and aromatic plants available to policy-makers and entrepreneurs. It can be used to frame effective policies and create an

environment conducive to the growth of the plant-based medicine industry, bringing economic benefit to African nations. It will help health organizations to improve the health of their people by using their own resources and a less expensive system of medicine, which is accepted by African society. It could also lead scientific communities to increase R&D activities in the field.
