The history, culture, and lifeways of New Netherland as researched and interpreted by Dutch and American scholars. *The Archaeology of New Netherland* 010 Publishers
"America's History helps AP students: Grasp vital themes: The seventh edition emphasizes political culture and political economy to help students understand the ways in which society, culture, politics, and the economy inform one another. Understand periodization: America's

History's unique seven-part structure, which organizes history into distinct eras, introduces students to periodization and helps them understand cause and effect, identify historical continuities, and track change over time. Develop the skills they need to succeed: America's History's hallmark analytical narrative and pedagogy help students synthesize what they've learned and interpret history for themselves."--Back cover. Winner, 2023 SAA Book Award - Popular, Society for American Archaeology Honorable Mention, 2024 Felicia A. Holton Book Award, Archaeological

Institute of America Bits and pieces of the lives led long before the age of skyscrapers are scattered throughout New York City, found in backyards, construction sites, street beds, and parks. Indigenous tools used thousands of years ago; wine jugs from a seventeenth-century tavern; a teapot from Seneca Village, the nineteenth-century Black settlement displaced by Central Park; raspberry seeds sown in backyard Brooklyn gardens—these everyday objects are windows into the city's forgotten history. Buried Beneath the City uses urban archaeology to retell the history of New York, from the deeper layers of the past to the topsoil of recent events.

The book explores the ever-evolving city and the day-to-day world of its residents through artifacts, from the first traces of Indigenous societies more than ten thousand years ago to the detritus of Dutch and English colonization and through to the burgeoning city's transformation into the modern metropolis. It demonstrates how the archaeological record often goes beyond written history by preserving mundane things—details of everyday life that are beneath the notice of the documentary record. These artifacts reveal the density, diversity, and creativity of a city perpetually tearing up its foundations to rebuild itself. Lavishly illustrated with images of objects excavated in the city, *Buried Beneath the City* is at once an archaeological history of New York City and an introduction to urban archaeology. *Subjects* Cambridge University Press

Archaeology Outside the Box makes contemporary archaeology germane to the general public as well as to researchers in other disciplines. In thirty-one richly illustrated chapters, a wide variety of projects is presented by an international group of

anthropologists, archaeologists, architects, and artists. These aim to broaden the applicability of archaeology by reflecting on archaeological remains in novel ways, or by addressing contemporary concerns with archaeological theory and research methods. Demonstrating the fascinating and pertinent nature of archaeology, the authors go far beyond its definition as a discipline that unearths objects of ancient material culture. Many chapters also provide arguments relevant to the soul-searching discussions currently taking place within archaeology worldwide and accelerated by the Black Lives Matter movement and the recent Covid-19 pandemic.

This volume is the first in a planned series of reports on the investigations of the Lahav Research Project (LRP) at Tell Halif, located near Kibbutz Lahav in southern Israel. The LRP has focused widely on stratigraphic, environmental, and ethnographic problems

related to the history of settlement at Tell Halif and in its immediate surroundings, from prehistoric through modern times. It is fitting that this LRP series begins by focusing on remains from Site 101, which was the first location excavated by the team in 1973. This initial effort involved investigation of a warren of shallow caves that had been exposed by efforts to widen the road into the kibbutz. In this volume, J. P. Dessel reports on the excavation undertaken at Site 101 during Phase II and is also supplemented by his later research. The excavation itself was guided throughout by Dessel's determination to require the total retrieval of all ceramic remains. It was his rigorous follow-through on all details involved in the analysis of materials that produced the pioneering results herein presented. Readers will find the book important for the archaeology and history of the southern Levant in the 4th millennium B.C.E. as well as for connections between the Levant and surrounding regions in that era.

The 1992 publication of *Pottery Function* brought together the ethnographic study of the Kalinga and developed a method and theory for how pottery was actually used. Since then, there have been considerable advances in understanding how pottery was actually used, particularly in the area of residue analysis, abrasion, and sooting/carbonization. At the 20th anniversary of the book, it is time to assess what has been done and learned. One of the concerns of those working in pottery analysis is that they are unsure how to “do” use-alteration analysis on their collection. Another common concern is understanding intended pottery function—the connections between technical choices and function. This book is designed to answer these questions using case studies from the author and his colleagues for applying use-alteration analysis to infer actual pottery function. The focus of *Understanding Pottery Function* is on how practicing archaeologists can infer function from their ceramic collection. *Historical Archaeology in South Africa* Bloomsbury Publishing
"The Grove Encyclopedia

of Materials and Techniques deals with all aspects of materials, techniques, conservation, and restoration in both traditional and nontraditional media, including ceramics, sculpture, metalwork, painting, works on paper, textiles, video, digital art, and more. Drawing upon the expansive scholarship in *The Dictionary of Art* and adding new entries, this work is a comprehensive reference resource for artists, art dealers, collectors, curators, conservators, students, researchers, and scholars." "Similar in design to *The Grove Encyclopedia of Decorative Arts*, this one-volume reference work contains articles of various lengths in alphabetical order. The shorter, more factual articles are combined with larger, multi-section articles tracing the development of materials and techniques in various geographical locations. The *Encyclopedia* provides unparalleled scope and depth, and it offers fully updated articles and bibliography as well as over 150 illustrations and color plates." "The *Grove Encyclopedia of Materials and Techniques* offers

scholarly information on materials and techniques in art for anyone who studies, creates, collects, or deals in works of art. The entries are written to be accessible to a wide range of readers, and the work is designed as a reliable and convenient resource covering this essential area in the visual arts."

This is a book on the rise and fall of diasporic communities in Early Modern urban centers in Denmark and Sweden. It contains 17 chapters written by archaeologists, historians and scientists, ranging from in-depth studies of artefacts, biofacts and archaeological features to large-scale analyses of community formation among natives and migrants of multiple origins. The plethora of sources and approaches afforded by the numerous disciplines involved enables a significant new insight into the creation and recreation of migrant communities in these Early Modern towns. Routledge

The use of instrumental neutron activation analysis (INAA) in ceramic research in the American Southwest has become widespread over the last ten years. This volume presents case studies of Southwestern ceramic production and distribution in which INAA is used as the primary analytical technique. These studies use provenance determination to explore such issues as exchange, migration, social identity, and economic organization. Case studies from the Southwestern periphery provide a comparative perspective from which to view the range of variation in Southwestern ceramic circulation patterns. Several of the case studies use mineralogical approaches

to supplement chemical sourcing data. And, a case study using petrographic analyses provides a counterpoint to the emphasis on chemical approaches (INAA) in this volume. This volume documents the cumulative contribution of INAA-based ceramic characterization to knowledge of the prehistory of the Southwest.

The First Modern Economy
Springer Science & Business Media

This book sheds some necessary light on local economies from the (late) Hellenistic to the Late Roman period. The concepts of regions and regionality are employed to explore the complexity of ancient economies and (ceramic) variability and change in Boeotia (Central Greece), largely on the basis of the survey data generated by the Boeotia Project.

Bright red terra sigillata pots dating to the first three centuries CE can be found throughout the Western Roman provinces. The pots' widespread distribution and recognisability make them key evidence in the effort to reconstruct the

Roman Empire's economy and society. Drawing on recent ideas in material culture, this book asks a radically new question: what was it about the pots themselves that allowed them to travel so widely and be integrated so quickly into a range of contexts and practices? To answer this question, Van Oyen offers a fresh analysis in which objects are no longer passive props, but rather they actively shape historical trajectories.

This is the first monograph devoted solely to the ceramics of Cyprus in the Hellenistic and Roman Periods. The island was by then no longer divided into kingdoms but unified politically, first under Ptolemaic Egypt and later as a province in the Roman Empire.

Submission to foreign rule was previously thought to have diluted - if not obliterated - the time-honoured distinctive Cypriot character. The ceramic evidence suggests otherwise. The distribution of local and imported pottery in Cyprus points to the existence of several regional exchange

networks, a division that also seems reflected by other evidence. The similarities in material culture, exchange patterns and preferential practices are suggestive of a certain level of regional collective self-awareness. From the 1st century BC onwards, Cyprus became increasingly engulfed by mass produced and standardized ceramic fine wares, which seem ultimately to have put many of the indigenous makers of similar products out of business - or forced them to modify their output. Also, the ceramic record gradually became less diverse during the Roman Period than before - developments which we today might be inclined to view as symptoms of an early form of globalisation.

Old Problems and New Perspectives in the Archaeology of South Asia Routledge

Prehispanic Domestic Units in Western Mesoamerica presents different analytical approaches for interpreting household composition and cultural site formation processes in prehispanic western Mesoamerica.

Archaeological data

collected using both stratigraphic and reconnaissance methods are combined with and interpreted using a combination of ethnohistoric, ethnographic, and ethnoarchaeological information. The result is a richer and more complete picture of prehispanic household structure than any single analytic approach could produce on its own. The book is organized into several sections based on common theme and geographic area. The first three chapters provide a broad discussion of conceptual and methodological difficulties that archaeologists must resolve in the study of prehispanic households. Subsequent chapters present case studies which examine households from two areas of western Mesoamerica: the Central Mexican highlands and the Gulf Coast of Mexico. Eight case studies from the Central Mexican highlands provide a longitudinal perspective on changing household composition. Four of these examine households during the late Formative, Classic, Epiclassic, and Early Postclassic periods (650 B.C.-A.D. 1200),

while four others focus specifically on household structure during the century immediately preceding the Spanish Conquest. Two additional case studies provide comparative information on household organization in the South Gulf Coast region during the Classic period. Prehispanic Domestic Units in Western Mesoamerica: Studies of the Household, Compound, and Residence will be an excellent reference for all anthropologists and archaeologists interested in prehispanic western Mesoamerica.

Ceramics, Cuisine and Culture Springer

Papers in this volume cover all shores of the Black Sea and address, alongside many other topics, the establishment dates of some Greek Colonies; East Greek transport amphorae; the history of Tekkeköy; the pre-Roman economy of Myrmekion; Byzantine finds at Komana; glass bracelets from Samsun Museum; dating the Kavak Bekdemir Mosque in Samsun.

Archaeologist are

increasingly focusing on the transformation of artifacts from their use in the past to their appearance in the archaeological record, trying to identify the natural and cultural processes that created the archaeological record we study today. In *Classical Archaeology*, attention to these processes received an impetus by J. Theodore Pena's 2007 monograph, *Roman Pottery in the Archaeological Record*, which considered how ceramic vessels were made, used and stayed in use serving various secondary purposes, before finally being discarded. Pena relied mainly on evidence from Roman Italy, which raises the question of the impact of similar cultural forces on pottery from other periods and places. His work accentuates the need to continue the process of building and developing explicit interpretive models of ceramic life-histories in Mediterranean archeology. With a view to beginning to address these challenges, the editors invited a group of specialists in the pottery of Greece and the rest of the Eastern Mediterranean to a

colloquium in Athens in June 2008, asking the contributors to reconsider Pena's general models, approaches and examples from their own particular geographic and cultural perspectives. This publication constitutes the proceedings of this colloquium.

This volume offers an integrative approach to the application of evolutionary theory in studies of cultural transmission and social evolution and reveals the enormous range of ways in which Darwinian ideas can lead to productive empirical research, the touchstone of any worthwhile theoretical perspective. While many recent works on cultural evolution adopt a specific theoretical framework, such as dual inheritance theory or human behavioral ecology, *Pattern and Process in Cultural Evolution* emphasizes empirical analysis and includes authors who employ a range of backgrounds and methods to address aspects of culture from an evolutionary perspective. Editor Stephen Shennan

has assembled archaeologists, evolutionary theorists, and ethnographers, whose essays cover a broad range of time periods, localities, cultural groups, and artifacts.

Ceramics of Ancient America University Press of Florida

The Archaeology of New Netherland illuminates the influence of the Dutch empire in North America, assembling evidence from seventeenth-century settlements located in present-day New York, New Jersey, Connecticut, Pennsylvania, and Delaware. Archaeological data from this important early colony has often been overlooked because it lies underneath major urban and industrial regions, and this collection makes a wealth of information widely

available for the first time. Contributors to this volume begin by discussing the global context of Dutch colonization and reviewing typical Dutch material culture of the time as seen in ceramics from Amsterdam households. Next, they focus on communities and activities at colonial sites such as forts, trading stations, drinking houses, and farms. The essays examine the agency and impact of Indigenous people and enslaved Africans, particularly women, in the society of New Netherland, and they trace interactions between Dutch settlers and Europeans from other colonies including New Sweden. The volume also features landmark studies of cooking pots, marbles,

tobacco pipes, and other artifacts. The research in this volume offers an invitation to investigate New Netherland with the same sustained rigor that archaeologists and historians have shown for English colonialism. The many topics outlined here will serve as starting points for further work on early Dutch expansion in America. Contributors: Craig Lukezic | John P.
