The Practice of Qualitative Research

John Wiley & Sons

Language acquisition research is

challenging—the intricate behavioral and cognitive foundations of speech are difficult to measure objectively. The audible components of speech, however, are quantifiable and thus provide crucial data. This practical guide synthesizes the authors’

decades of experience into a comprehensive set of tools that will allow students and early career researchers in the field to design and conduct rigorous studies that produce reliable and valid speech data and interpretations. The authors thoroughly review specific techniques for obtaining qualitative and quantitative speech data, including how to tailor the testing environments for optimal results. They explore observational tasks for collecting natural speech and experimental

tasks for eliciting specific types of speech. Language comprehension tasks are also reviewed so researchers can study participants’ interpretations of speech and conceptualizations of grammar. Most tasks are oriented towards children, but special considerations for infants are also reviewed, as well as multilingual children. Chapters also provide strategies for transcribing and coding raw speech data into reliable data sets that can be scientifically analyzed.

Furthermore, they investigate the intricacies of interpretation so that researchers can make empirically sound inferences from their data and avoid common pitfalls that can lead to unscientific conclusions.

On the occasion of the 10th anniversary of the Swiss Rules of International Arbitration, the ASA decided to devote its annual conference in January 2014 to this topic. This volume of the ASA Special Series contains the written versions of all the presentations given

during this conference. Most of the contributions were based on the verbatim protocol which was prepared on the conference day and thus retain their informal speaking style. In their 10 years of existence, the Swiss Rules have established themselves as modern arbitration rules, offering a user efficient and transparent arbitral proceedings. Probably the most distinguishing feature of the Swiss Rules with regard to the administration of the cases is their "light touch"

as applied by the Swiss Chambers' Arbitration Institution, reserving however a supervisory function for its Court. This volume is structured along the panels of the conference. The first panel addressed the history and the background of the Rules as well as their main characteristics. The second and the third panels explore the key features of the revised Swiss Rules, namely the consolidation and joinder provisions, the set-off and counter-claim provisions,

the expedited procedure, provisional measures and the emergency arbitrator as well as provisions on confidentiality and settlement facilitation. While the fourth panel provided the insiders' view into how the Institution administers its cases, the fifth and last panel discussed the perspectives of the users, the arbitrators and counsel as well as their experiences with the Swiss Rules.

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a

population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and

services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients

having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

The overriding theme of

Group Work: Processes and Applications is a focus on the specialized group work that counselors perform from a systemic perspective in a multicultural context. This text briefly covers traditional theoretical approaches, focusing more on the techniques and applications of the approaches, but the core of the text involves the systemic approach to group work: preparing group leaders to facilitate the systemic group process, from planning the group through the

four stages of group work: forming and orienting, transition, working, and termination. The content is aligned with 2016 CACREP standards.

Numerous other techniques, covered, are linked with specific theoretical orientations. *Research and Reflection* Routledge
