Weltweit leben Abermillionen von Menschen in Stadten. Die "naturferne" Lebensweise der Stadtmenschen, die sich langst auch auf dem Lande verbreitet hat, bringt eine Fulle von Herausforderungen und Problemen mit sich. Die alte Metropole Wien im Herzen Europas scheint die meisten ihrer drangendsten Umweltprobleme bereits in der Vergangenheit gelost zu haben. Ist dieser Eindruck zutreffend? Wie sind die Wiener und Wienerinnen im Laufe der Geschichte mit ihrer "Umwelt Stadt" umgegangen? Auf welche Weise haben sie den einstigen Naturraum zwischen Donau und Wienerwald in eine Stadtlandschaft verwandelt? Welche ihrer Umweltmanahmen waren kurzlebig, welche von Dauer und zukunftsweisend? Mit Fragen solcher Art beschaftigen sich die neunzig Autorinnen und Autoren aus Wissenschaft und Praxis, die der vorliegende Band zu einer "Geschichte des Natur- und Lebensraumes Wien"

versammelt hat. Auch bei diesem Ruckblick geht es im Grunde darum, die Gegenwart besser verstehen zu lernen und uber die Zukunft nachzudenken.

Scholarship on utopias in film has so far focused exclusively on dystopias - but utopias are about criticizing the present rather than telling a gripping story Utopia and Reality looks into propaganda and documentary films for depictions of better worlds. This volume brings together researchers from two fields that have so far seen little exchange - documentary studies and utopian scholarship Covers a wide range of films from Soviet avant-garde to propaganda videos for the terror organisation ISIS, and from political-activist to ecofeminist and interactive documentaries.

**Environmental External Costs of Transport** Springer

For courses in Environmental studies, Environmental Sociology, Environmental geography and Development studies; Women's studies and Women's issues options on a wide variety of degree courses. Combining theory with practice, this concise, accessible

text provides a comprehensive introduction to the concepts, theories and results of environmental sociology from a feminist perspective. Within an international context it portrays in full the different feminist perspectives on environment and society, which are marginalized in mainstream research, and shows how the feminist critique on environmental sociology contributes to a more general feminist critique of society. Part of the Feminist Perspectives Series providing stimulating introductions to key feminist topics and debates written by well-known, experienced teachers in each field.

**Two German Architectures** New York : United Nations  
The importance of local programmes in driving sustainable development has been enshrined in Local Agenda 21, arguably the most influential output of the 1992 Rio 'Earth' Summit. Its importance has been reiterated more recently by the Johannesburg Summit in 2002. Local Environmental Sustainability sets the context for local environmental sustainability and, in particular, considers how local government can promote sustainable development by building partnerships with different groups and organisations in the local community. Using case studies, individual chapters focus on different types of regional and local initiatives, the partnerships that have made them possible, and the key issues in making them effective. Local Environmental Sustainability provides a blueprint for both local governments and local communities to work together effectively for a more sustainable future. An important new study focusing on the links between local environmental initiatives and the provision of sustainable services Includes case studies showing how local government initiatives can work in the community

Considers the relationship between local programmes and the implementation of Local Agenda 21

**Zukunftsfähiges Deutschland** Böhlau Verlag Wien  
Human well-being relies critically on ecosystem services provided by nature. Examples include water and air quality regulation, nutrient cycling and decomposition, plant pollination and flood control, all of which are dependent on biodiversity. They are predominantly public goods with limited or no markets and do not command any price in the conventional economic system, so their loss is often not detected and continues unaddressed and unabated. This in turn not only impacts human well-being, but also seriously undermines the sustainability of the economic system. It is against this background that TEEB: The Economics of Ecosystems and Biodiversity project was set up in 2007 and led by the United Nations Environment Programme to provide a comprehensive global assessment of economic aspects of these issues. This book, written by a team of international experts, represents the scientific state of the art, providing a comprehensive assessment of the fundamental ecological and economic principles of measuring and valuing ecosystem services and biodiversity, and showing how these can be mainstreamed into public policies. This volume and subsequent TEEB outputs will provide the authoritative knowledge and guidance to drive forward the biodiversity conservation agenda for the next decade.

**Water-Related Urbanization and Locality** Taylor & Francis  
The global environment is changing rapidly under the impact of human activities, and an important element of this change is related to global climate modification. Can the study of climate

and history help in devising strategies for coping with this change? What might be the type of information most useful in this context? What are the pitfalls awaiting the unwary? These are the kinds of questions that led us to bring together experts from the natural and social sciences with a strong interest in history, to promote discussion between workers in different disciplines by focussing on a common topic of great interest to society. The meeting was arranged in the framework of a "Hanse Conference" within the interdisciplinary program of the Hanse-Wissenschaftskolleg, a foundation set up to promote interdisciplinary studies in collaboration between the universities of Bremen and Oldenburg. The aim of the Hanse Conferences in general is to provide opportunities for experts from different fields of the sciences and humanities to come together and explore the larger framework of topics of common interest. What unites the participants is their desire to look over the fence to neighboring disciplines. Young colleagues who wish to build an interdisciplinary career are particularly welcome. In the Hanse Conference on Climate and History, we have endeavoured to build bridges between the climate sciences and the sociological sciences concerned with environmental impacts on human activities. The geological sciences, we felt, are especially well suited to the purpose because they already comprise historical aspects.

Landscape Planning with Ecosystem Services Luxembourg : European Commission

This book discusses the protection, planning, and design of sustainable urban water environments. Against the backdrop of environmental changes, it addresses issues of water resource

protection and sustainable development in China and Germany at different stages of urbanization, as well as relevant strategies and lessons learned. It focuses on three topics: balance between water environment protection and utilization in the urbanization process; sustainable use of water resources in the urbanization process; and water-related planning and design strategies in urbanization and local cultural development processes. In the context of water resources, China and Germany can learn from each other's experiences and can support one another in the fields of urbanization and locality. As such, the book brings together Chinese and German scientists from various disciplines, such as planning, geography, landscape, architecture, tourism, ecology, hydraulic engineering and history to provide a multicultural and multidisciplinary perspective on the topic and examine the challenges and opportunities as well as the planning and design strategies to achieve sustainable, water-related urban spaces. By combining theoretical and practical approaches, it appeals to academics and practitioners around the globe.

*Transport infrastructure and regional economic development in Europe* Routledge

This fully revised and updated edition of an established reference book, provides in one volume the most comprehensive and detailed statistical guide available to the government and politics of the twenty-four countries in the OECD. There is no lack of statistical data about the OECD countries (the nineteen countries of Western Europe together with Canada, the United States, Japan, Australia, and New Zealand); but much of the material is hard to track down and little is available in comparative form. The editors of the present volume have sifted through many hundreds

of sources to select the essential facts and figures on population, social structure, employment, the economy, public finance, government structures, and political parties from 1950 to the present day. In addition they provide social and economic background for each of the countries covered to enable the data to be put in context. A short final section lists sources of further information. The resulting combination is both invaluable and fascinating, whether it is used casually to check up a fact or two, or systematically to make detailed comparisons between the most advanced political systems of the Western world.

*Utopia and Reality* Cambridge University Press

Looks back at the last 30 years and forward to 2000 and describes the most likely course the world economy will take in the 1990s

**Political Data Handbook** NYU Press

“Science in fiction,” “geek novels,” “lab-lit”—whatever one calls them, a new generation of science novels has opened a space in which the reading public can experience and think about the powers of science to illuminate nature as well as to generate and mitigate social change and risks. Under the Literary Microscope examines the implications of the discourse taking place in and around this creative space. Exploring works by authors as disparate as Barbara Kingsolver, Richard Powers, Ian McEwan, Ann Patchett, Margaret Atwood, and Michael Crichton, these essays address the economization of scientific institutions; ethics, risk, and gender disparity in scientific work; the reshaping of old stereotypes of scientists; science in an evolving sci-fi genre; and reader reception and potential contributions of the novels to public understandings of science. Under the Literary Microscope

illuminates the new ways in which fiction has been grappling with scientific issues—from climate change and pandemics to artificial intelligence and genomics—and makes a valuable addition to both contemporary literature and science studies courses. In addition to the editors, the contributors include Anna Auguscik, Jay Clayton, Carol Colatrella, Sonja Fücker, Raymond Haynes, Luz María Hernández Nieto, Emanuel Herold, Karin Hoepker, Anton Kirchhofer, Antje Kley, Natalie Roxburgh, Uwe Schimank, Sherryl Vint, and Peter Weingart.

*The Role of Early Humans in the Accumulation of European Lower and Middle Palaeolithic Bone Assemblages* Earthscan Publications

This book is a cornerstone resource for a wide range of organizations and individuals concerned with sustainable development at national and local levels, as well as for international organizations concerned with supporting such development. While the focus is on integrated strategies for sustainable development, the approaches and methods covered are equally relevant to poverty reduction, environmental and sectoral strategies, program development and review. Agenda 21 called for all countries to develop sustainable development strategies. For such strategies to be effective there needs to be a real commitment. In every country, government at all levels, the private sector and civil society must work together in a true partnership, in transparent ways which enable genuine stakeholder participation. The necessary mechanisms and processes need to be coordinated to enable continuous learning and improvement. This resource book provides flexible, non-prescriptive guidance on how to develop, assess and implement national sustainable development strategies. It sets out principles

and ideas on process and methods, and suggests how these can be used. It is based on an analysis of past and current practice, drawing directly from experience in both developed and developing countries. Following a discussion of the nature and challenges of sustainable development and the need for strategic responses to them, the heart of the book covers the main tasks in strategy processes. Individual chapters offer a rich range of guidance, ideas and case studies on:

- \* The nature of sustainable development strategies and current practice
- \* Key steps in starting, managing and improving sustainable development strategies
- \* Analysis of and for sustainable development
- \* Participation for sustainable development
- \* Information, education and communications
- \* Strategy decision-making frameworks and procedures
- \* The financial basis for strategies
- \* Monitoring and evaluation systems.

*Sustainable Development Strategies* Routledge

This book examines the issues involved in the attempts to compare political systems, and discusses how the methods and results of comparative politics can be improved.

**Humans in the Global Ecosystem** Walter de Gruyter

The founder of the Garden City Association outlines his radical new approach to urban planning. First published in 1898.

*Umwelt Stadt* Visitbritain Publishing

Transport is very important for the economy and our welfare. However, transport also causes a lot of problems, including air pollution. Such problems should be taken into account, when making decisions. A prerequisite for doing so is, that the impacts are known, quantitatively measured and allocated to the different activities in transport. Furthermore, they should be transformed

into monetary units to be used as a basis for cost-benefit analyses or as an aid for setting taxes and charges, that reflect the external costs. This book describes a methodology for calculating impacts of transport activities and external costs caused by air pollution and presents numerous applications of this methodology for different transport technologies, locations and policy case studies. The approach has been developed and results have been calculated within the research project 'Externe Core/Transport', financed to a large extent by the European Commission, Directorate General Research. We would like to thank especially Pierre Vallette and Pekka Jarviletho from the EC for their advice and support. A considerable number of experts with expertise in the different disciplines of this highly interdisciplinary work contributed to this book. The editors would like to thank the authors (see list on p. XV) for their contributions; it is especially remarkable, that the authors helped to make this book an integrated whole instead of a number of independent contributions.

*Feminist Perspectives on Environment and Society* Springer Science & Business Media

'This excellent collection of essays provides a highly knowledgeable and insightful overview of current knowledge in the sub-field of elections and voting in the world's democracies. Coherent in organization and wide-ranging in content and perspective, this is a book that should be read by anyone interested in political science.' - Anthony Mughan, The Ohio State University In this major new edition the world's leading international scholars have again produced an indispensable guide and up-to-date review of the whole field. Each of the

chapters (the majority of which are completely new) provide a broad theoretical and comparative understanding of all the key topics, making this essential reading for students and lecturers of elections and voting behavior, comparative politics, parties, and democracy.

*Global Outlook 2000* Springer-Verlag

Human well-being depends in many ways on maintaining the stock of natural resources which deliver the services from which human's benefit. However, these resources and flows of services are increasingly threatened by unsustainable and competing land uses. Particular threats exist to those public goods whose values are not well-represented in markets or whose deterioration will only affect future generations. As market forces alone are not sufficient, effective means for local and regional planning are needed in order to safeguard scarce natural resources, coordinate land uses and create sustainable landscape structures. This book argues that a solution to such challenges in Europe can be found by merging the landscape planning tradition with ecosystem services concepts. Landscape planning has strengths in recognition of public benefits and implementation mechanisms, while the ecosystem services approach makes the connection between the status of natural assets and human well-being more explicit. It can also provide an economic perspective, focused on individual preferences and benefits, which helps validate the acceptability of environmental planning goals. Thus linking landscape planning and ecosystem services provides a two-way benefit, creating a usable science to meet the needs of local and regional decision making. The book is structured around the Driving forces-Pressures-States-Impacts-Responses

framework, providing an introduction to relevant concepts, methodologies and techniques. It presents a new, ecosystem services-informed, approach to landscape planning that constitutes both a framework and toolbox for students and practitioners to address the environmental and landscape challenges of 21st century Europe.

Sustainable entrepreneurship has attracted growing attention in both scholarly and practitioner circles. Focusing on generating social, environmental and business value, the notion has been raised more recently to address the contribution of entrepreneurial activities to sustainable economic and social development. Sustainable Entrepreneurship and Social Innovation builds on a theoretical framework that addresses related topics via a combination of insights from sustainability, policy, managerial, strategic, innovation and institutional perspectives. Providing empirical casework as well as a conceptual and theoretical framework, the book takes a global, interdisciplinary approach to the emergent field of sustainable entrepreneurship. The book highlights elements of sustainable entrepreneurship which have a societal impact as well as regional relevance and related aspects of innovation are also presented. Definitional issues are further elaborated in order to encompass the main inter-connected fields of study, sustainable entrepreneurship and social innovation. This book is an important resource for academic researchers, and postgraduate and advanced undergraduate students in the fields of entrepreneurship, innovation and sustainability.

The Global 2000 Report Green Books

“An important contribution to the global debate about growth, equality, climate change, and the path to a viable human future.” —David Korten, international bestselling author of *When Corporations Rule the World* The biggest challenges facing human wellbeing today—widening income inequality, continuing global poverty, and environmental degradation—may be simple to solve in theory. But, because we are required to come up with solutions that are acceptable to a political majority in the rich world, they are much harder to solve in practice. Most of the commonly proposed “solutions” are simply not acceptable to most people. Many of these proposed solutions—like stopping the use of fossil fuels—require a sacrifice today in order to obtain an uncertain advantage in the far future. Therefore they are politically infeasible in the modern world, which is marked by relatively short term thinking. In *Reinventing Prosperity*, Graeme Maxton and Jorgen Randers provide a new approach altogether through thirteen recommendations which are both politically acceptable and which can be implemented in the current period of slow economic growth around the world. *Reinventing Prosperity* solves the forty-year-old growth/no-growth standoff, by providing a solution to income inequality, continuing global poverty and climate change, a solution that will provide for economic growth but with a declining ecological footprint. *Reinventing Prosperity* shows us how to live better on our finite planet—and in ways we can agree on. “An essential guide to

those who want to change the world for the better—and for certain.” —Ha-Joon Chang, international bestselling author of *23 Things They Don't Tell You About Capitalism* “[A] well-argued book . . . explaining complex issues in a style that is clear, logical, and succinct.” —Publishers Weekly

The Construction Manuals from Edition Detail are among the most important reference works in the specialist literature. The latest volume shows the potential of the material concrete and documents comprehensively the technical principles of using concrete in construction. Chapters cover the history of the material, the properties of concrete, reinforced concrete, and prestressed concrete, the treatment of its surface. Also covered are the basic principles of statics for large and small structures, and the building requirements with respect to heat, damp, sound-proofing and fire protection according to the most recent norms and standards. Finally a large number of built examples are presented from illustrations of the complete structure down to detailed plans, showing the broad spectrum of applications for concrete in contemporary building. All plans have been specially produced by the editorial department Detail for this book and for ease of comparison, they have been drawn to the same scale.
