The Future of Nursing 2020-2030

Nursesbooks.org

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work

force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's

degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Accompanys: 9781609136918 . *Fundamentals of Nursing* Prentice Hall Bringing together sociological theories and nursing practice this text develops a dynamic conceptualisation of the nursing role which is rooted in the work setting. It looks at the factors which have shaped nursing work in

the past and those which are likely to shape it in the future. Nurses' work is changing in two respects: the place nursing occupies in the health care division of labour and the routine shifting of work boundaries that nurses experience in their daily work. Drawing on her detailed observations of the reality of nursing work in a district general hospital, Davina Allen explores these linked themes, focussing on five key work boundaries:
*nurse:doctor
*nurse:manager
*nurse:support worker
*nurse:patient
*nurse:nurse The text provides new insight into many of the tensions and dilemmas nurses routinely face and the processes and

constraints through which their work is fashioned. It offers a new way of thinking about the nursing role which is particularly relevant at a time when the scope of nursing practice is expanding and when the integrated approach to health and social care is seen as the key to provision and improved services.

The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest

possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full

health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by The Future of Nursing:

This textbook fills a gap in education for licensed practical nurses (LPN), providing information specific to their own needs and concerns. Firstly, it clarifies the leadership role of LPNs in the healthcare setting, and then identifies the knowledge, skills and abilities related to leadership, management, communication, culture change and person-directed care concepts. It also explains the efficacy of these concepts related to the LPN care of patients in the work setting and reviews the Nurse Practice Act (NPA) enacted in every US state. LPNs play an essential role in the patient care team and we have to ensure they receive advanced education as

practitioners in healthcare settings that reach vulnerable populations such the elderly. They have been considered as the registered nurses' right hand in acute care as well as many home-health settings. They provide basic medical and nursing care, ensure the comfort of patients, discuss health care with patients, and report the status of patients to registered nurses and doctors. But the LPNs are often expected to take on a real leadership role based on the perception that as licensed nurses they already have all the qualifications and education necessary for leadership roles. However, there is a gap in the education they receive and a limited body of

literature dedicated to them. Written in honor of all LPNs, this educational textbook fills that gap. With learning objectives, review questions and

scenarios, it is a valuable resource for courses for undergraduate students training to be LPNs.
