For many women in developing countries, such as sub-Saharan Africa, south and south-east Asia, and central and south America, there is a high risk of cervical

**Practical Manual of Obstetrics and Gynecology for Residents and Fellows**

This colposcopy manual was developed in the context of the cervical cancer screening research studies of the International Agency for Research on Cancer (IARC) and the related technical support provided to national programs. It is thus a highly comprehensive manual, both for the training of new

colposcopists and for the continuing education and reorientation of those who are more experienced. This manual offers a valuable learning resource, incorporating recent developments in the understanding of the etiology and pathogenesis of cervical intraepithelial neoplasia (CIN), as well as in colposcopy and cervical pathology. Expertise in performing satisfactory, safe, and accurate colposcopic examinations requires high competence in the technical, interpretive, and cognitive aspects, and the capability to develop pragmatic and effective management plans and treatment. This comprehensive and concise manual covers all these aspects and serves as

a useful handbook for acquiring the necessary skills for the visual recognition and interpretation of colposcopic findings and for developing the personal and professional attributes required for competence in colposcopy.

The editor of Skin Cancer Management: A Practical Approach, Dr. Deborah MacFarlane, gathers experts in selected techniques related to the assessment and management of skin cancer and has them critically review the existing literature in light of their considerable experience delivering care. The authors make recommendations for the best way to perform procedures. The tables provided in each chapter then become a manual of how to perform these procedures, and may in time be adopted by the wider universe of dermatologists as the standard of performance. The

detailed descriptions of technique and treatment pearls lead the novice through the sequence of events in a way that instills confidence in their ability to safely perform the procedure. An example of the painstaking explanations is found in Chapter 5, Intralesional and Perilesional Treatment of Skin Cancers. The reader is advised to place eye protection on the patient and those performing the injection of methotrexate into a keratoacanthoma with a central crust. Rest assured that there will be a spray or stream of methotrexate emitted from the crusted area. Having eye protection will prevent methotrexate from accidentally getting

into someone's eye. Since we all learn to assimilate new information by taking action on the recommendations that we read, it would be a good idea for the physician to create, where relevant, a checklist for each procedure in the text. The checklist can be given to the office staff to set up the equipment for the procedure.

symptoms in children, and common respiratory therapies and treatment methods. It then proceeds through an examination of varying acute and chronic upper and lower respiratory diseases spanning from asthma and cystic fibrosis to vocal cord paralysis and sinusitis in both hospital and ambulatory settings. Nursing Care in Pediatric Respiratory Disease provides nurses and other health care providers with a comprehensive and practical resource which allows them to collaborate and advocate more effectively, as well as educate both the family and child in management of respiratory disorders.
