Carp fishing is the biggest growth area in coarse fishing. Specimen carping takes a specialist approach that sees dedicated anglers going in search of the biggest carp to inhabit lakes, rivers and canals. Once considered a niche following that only appealed to a small hard-core group of fanatics, the popularity of carp fishing has grown - and continues to grow - at a frightening pace. An increasing number of

tackle companies, fisheries and tackle shops now base their entire business around carp fishing specialization and the "bug" has spread beyond Britain into the whole of western, central and eastern Europe. This sister manual to Coarse Fishing manual will show the growing band of carping disciples how to catch them through over 500 illustrations and accompanying text.

Carp anglers talk about watercraft all the time. But what exactly is that? Some would say it's applying understanding of the environment in which the carp lives and the fish itself to catch more of them. And how do we improve our watercraft? By studying how the behaviour of the carp changes as environmental variables fluctuate daily and seasonally. We can do this by spending time on the lake or river bank and by reading about it. Carp Fishing Science is unlike all other carp fishing

books. It provides information which the angler can use in order to anticipate changes in the carp's behaviour, especially those related to nutrition and activity, therefore helping to improve the reader's watercraft. Jon Wood, marine biologist and experienced fish farm consultant, has written a book which looks at carp fishing from a very different point of view from all other publications; from that of the fish rather than the fisherman, which is really where it should be from. In *Carp Fishing Science*, he presents a distillation of more than two hundred scientific publications and has extracted the most valuable proven facts about the fish to allow the reader to know the animal in greater detail, modify strategies and put more fish on the bank. This book bridges a gap between that which has until now only been supposed and that which has been shown through scientific studies. The author delves into aspects of carp biology, fish physiology and environmental science in order to clarify some of the myths surrounding carp fishing and answers questions such as why and how carp feed, which substances have been shown to cause a positive feeding response to carp,

how the fish uses each of its senses and how the nutritional requirements of the carp change through the year. If you are a carp angler, a carp producer, a bait maker, a fisheries student, or just someone who has always wanted to think like a fish, then this book should be in your collection.

**To Catch a Carp** Simon and Schuster  
*An Anthropology of Landscape* tells the fascinating story of a heathland landscape in south-west England and the way different individuals and groups engage with it. Based on a long-term anthropological study, the book emphasises four individual themes: embodied identities, the landscape as a sensuous material form that is acted upon and in turn acts on people, the landscape as contested, and its relation to emotion. The landscape is discussed in relation to these themes as both 'taskscape' and 'leisurescape', and from the perspective of different user groups. First, those who manage the landscape and use it for work: conservationists, environmentalists, archaeologists, the Royal Marines, and quarrying interests. Second, those who use it in their leisure time: cyclists and horse riders, model aircraft flyers, walkers, people who fish there, and artists who are inspired by it. The book makes an innovative contribution to landscape studies and will appeal to all those interested in nature conservation, historic preservation, the politics of nature, the

politics of identity, and an anthropology of Britain.

The American Angler's Guide New Holland Australia(AU)

For the majority of anglers with a limited amount of time and money to spend, the first objective is quite simply 'to catch a carp'. In this book, the author and his distinguished contributors explain how this can best be achieved through a better understanding of what is happening above and below the water. A wealth of information and advice on all aspects of carp fishing is discussed; from baits and presentation to casting and tactics on different waters in different seasons. Written by one of the country's most famous and best-respected carp fishermen, this is essential reading for all carp anglers. AUTHOR: Tim Paisley is a carp angler with over twenty-five years' experience, and has been writing on the subject for over twenty years. In 1981 Tim co-founded the Carp Society and in 1988 launched Carpworld magazine. He has many books to his credit including for Crowood Big Carp [1990] and Carp Fishing [1988]. 80 photos & diagrams
