Expert contributors are leaders in the field of equine neonatal medicine and ensure the accuracy and clinical relevance of all information.

### The Mammalian Fetus in vitro Sylvan Dell Publishing

Estamos en un mundo complejo, los engranajes del poshumanismo han contaminado los estadios iniciales de la propia materialización corporal, de manera que los nacimientos se desarrollan ahora en los habitáculos de la tecnociencia. Por primera vez, la tecnología, lo instrumental, cortocircuita las vías naturales y sensitivas de las propias madres, que parecen subordinadas, sin remisión, a la dictadura marcada por los artefactos. En este caldo de cultivo, las vivencias, las emociones ligadas a la maternidad, corren el riesgo de quedar en el campo de lo subjetivo, de lo anecdótico, en el terreno de lo puramente metafísico, mientras la realidad es dictada por la biometría de lo objetivable, por la dictadura del positivismo. Se trata de una nueva «cultura del nacimiento», de un nuevo patrón – el «parto biotecnológico» – que ha impuesto su hegemonía en los escenarios de la procreación, cortocircuitando las vías de realización de los mismos «cuerpos gestantes». Habitamos, pues, un terreno misterioso, un asunto fronterizo que irrumpe en las páginas de este texto en aras de una mayor comprensión de los metarrelatos «mayéuticos» de la modernidad.

Origins of Physiological Regulations focuses on arrangements that maintain bodily properties and activities, including heart rate regulation, water intake and secretion, and cardiac determination. The monograph first offers information on physiological regulation, nonregulation and regulation, and ontogeny of physiological regulation. The text then ponders on heart rate regulation, programmed development, and metabolic equilibration. Discussions focus on early cardiac determination, cardiac pacemaker, set points, self-contained programs, water excretion and intake, and tolerance curves. The publication examines concentrations and their differentials and constancy and variability, including cellular composition and resting and range of heart rates. The text then elaborates on behavior as regulation, tools of regulation, feedbacks in regulations, tolerances and protections, and adaptations to environment. The monograph is a dependable source of information for research workers and advanced students interested in regulatory physiology or developmental biology.

Utilization of Nutrients during Postnatal Development investigates the nutritional aspects of postnatal development, with emphasis on functions that in some way are closely connected to food, including food intake, digestion, transport, and metabolism. Topics covered range from energy sources and energy balance in starvation to the quantitative and qualitative aspects of food intake. The fate of carbohydrates in infant animals is also discussed, along with the metabolism of lipids during postnatal development. Comprised of eight chapters, this volume begins with an analysis of the most important differences between adult and suckling rats, paying particular attention to thermoregulation and the action of hormones in the early postnatal period. Subsequent chapters deal with the effect of starvation at two environmental temperatures on losses in body weight; protein as an energy source; the absorption of glucose from the gastrointestinal tract; and energy metabolism in the human fetus and newborn. The final chapter is devoted to the late effects of

changes in diet composition during the weaning period. This book will be useful for students, practitioners, and researchers in physiology, biology, and developmental nutrition.

En mayo del 2011, Boris Cyrulnik visitó México como profesor invitado por la Universidad de Guadalajara para compartir sus reflexiones y ex-periencias con universitarios, profesionales de diversos campos y público en general durante el evento titulado Resiliencia: Vínculos e Inclusión Social. En este foro internacional, el Dr. Cyrulnik impartió la conferencia titulada Criterios de resiliencia: condiciones de un nuevo desarrollo después de un traumatismo. A partir de esta conferencia, Ana Guadalupe Sánchez y Laura Gutiérrez tuvieron un encuentro con él, donde el Dr. Cyrulnik, con gran transparencia, sensibilidad y honestidad, trazó con bellas palabras, un cuadro que nos acerca a su pensamiento, a sus sueños y sus afectos abriendo una dimensión muy íntima y personal de su vida. En esta obra se reproduce tanto la entrevista como la conferencia de Boris Cyrulnik. Ambas son imprescindibles y valiosas para el amplio público que sigue con gran interés su trabajo.

Being a mother of multiples and preemies is a great adventure which is unknown to many. It involves a lot of attention, commitment, dedication, and time to take care of your health at the same time as raising your newborn babies. Be moved by the experiences of a mother who delivered her triplets prematurely in a foreign country, with the help of the NIDCAP method, in the Neonatal Intensive Care Unit. It is not intended as an advice guide, but it does tell the story of several years of experience for her, her husband and their three babies. Are you afraid of finding out that you will have a multiple pregnancy? Do you know what it means to have babies born prematurely? Can you imagine what life will be like for you and your babies in the Neonatal Intensive Care Unit? Do you have any idea how exhausted you will feel during the first year? Have you heard about the consequences of burnout and chronic fatigue? In this book you will also find answers to your questions about what a high-risk pregnancy and an emergency caesarean section can be like, as well as different concerns such as premature birth and neonatal care,

psychological support networks and the monitoring of babies so that they can grow up in the best possible way. As parents, we are often faced with major changes in our lives, and a myriad of different and contradictory emotions and feelings manifest themselves due to the big event. Find out more: Necessary care for the mother during a high-risk pregnancy and in the postpartum. The optimal neonatal care needed for premature babies and the help of the NIDCAP method. Some complications and miracles that can occur in these fragile and sensitive babies. Tips on how to be an active mother in the NICU. The importance of follow-up in premature babies. Important topics such as chronic fatigue, burnout and sleep deprivation, as well as resilience and positive mental attitude. You will value your new conscious motherhood through direct contact with your baby.

El bebé feliz Britannica Digital Learning

La mayoría de los nuevos padres desconoce cómo se comporta un recién nacido, cómo expresa sus necesidades. Puesto que somos un animal eminentemente social, la cultura que nos rodea influye mucho en nuestras decisiones. El entorno ha opinado sobre el embarazo, la forma de alimentar al bebé; hay foros pro lactancia y pro crianza natural, pero también otros pro biberón y pro crianza conductista. No obstante, existe otro posible manantial adicional de información para los nuevos padres.

Nuestros bebés son cachorros, como los de tantos otros mamíferos. Las conductas de estos en cuanto al cuidado de sus crías pueden ayudarnos a entender mejor lo que nuestros bebés necesitan.

Ser madre es un vuelco al corazón que pone tu mundo cabeza abajo. Mirar a tu bebé a los ojos por primera vez reorganiza tus prioridades, da forma a tu vida; te lleva a prometerte que harás cuanto esté en tu mano por esa criatura. Pero traer un niño al mundo no implica solo la responsabilidad de cuidarlo y protegerlo; también la de soltarle, cuando llega el momento, y dejar que camine solo, que escoja los senderos que le pida su alma, que vuele libre de cargas sabiendo que nuestra tarea está completa. Ser madre es soltar el timón de una vida que hicimos posible, que alimentamos y nutrimos durante años, pero que no nos pertenece. Encontrar el equilibrio entre la ausencia y la presencia, entre la suavidad que hay en un abrazo y la libertad que se encuentra al deshacerlo, es aprender a sostener sin dirigir sus pasos. Julia Puig nos da en este libro algunas pautas para criar con alma y conseguir ese equilibrio leve y sutil de la maternidad; en el que se encuentran dos vidas entrelazadas como dos troncos nudosos que crecen uno al lado del otro, pero que son, y serán para siempre, irremediabilmente independientes.

In Breastfeeding Made Easy renowned paediatrician and father-of-three Carlos González, author of Kiss Me! How to raise your children with love and My Child Won't Eat!, brings his warmth and positivity to a subject close to his heart and his clinical practice: breastfeeding. In his characteristic friendly style, and by tackling the real-life questions mothers have about breastfeeding head-on, he explains: how breastfeeding works, and why most

mothers, with support, can do it if they want to how myths and misinformation can derail mothers, and how to avoid this how to manage introducing soli.

How we parent our children is at the heart of our relationships with them – and Dr Carlos Gonzalez, a renowned Spanish paediatrician and father, believes that our children deserve all the love we can give them. If we reject the routines and excessive discipline promoted by self-styled childcare experts, and instead parent with love, respect and freedom, we can allow our children to grow and thrive both physically and emotionally. A bestseller in Spain, Kiss Me encourages parents to see the good in their children and nurture it carefully, forging warm and rewarding family relationships. With discussions of how to handle common parenting issues including sleep, rewards and punishment and carving out quality time with our children, this warm and reassuring book is hugely valuable for parents in today's world.
