The mechanical engineering curriculum in most universities includes at least one elective course on the subject of reciprocating piston engines. The majority of these courses today emphasize the application of thermodynamics to engine efficiency, performance, combustion, and emissions. There are several very good textbooks that support education in these aspects of engine development. However, in most companies engaged in engine development there are far more engineers working in the areas of design and mechanical development. University studies should include opportunities that prepare engineers desiring to work in these aspects of engine development as well. My colleagues and I have undertaken the development of a series of graduate courses in engine design and mechanical development. In doing so it becomes quickly apparent that no suitable textbook exists in support of such courses. This book was written in the hopes of beginning to address the need for an engineering-based introductory text in engine design and mechanical development. It is of necessity an overview. Its focus is limited to reciprocating-piston internal-combustion engines - both diesel and spark-ignition engines. Emphasis is specifically on automobile engines, although much of the discussion applies to larger and smaller engines as well. A further intent of this book is to provide a concise reference volume on engine design and mechanical development processes for engineers serving the engine industry. It is intended to provide basic information and most of the chapters include recent references to guide more in-depth study.

This reference book provides a comprehensive insight into today's diesel injection systems and electronic control. It focusses on minimizing emissions and exhaust-gas treatment. Innovations by Bosch in the field of diesel-injection technology have made a significant contribution to the diesel boom. Calls for lower fuel consumption, reduced exhaust-gas emissions and quiet engines are making greater demands on the engine and fuel-injection systems.

ABCs for Future Race Car Drivers Independently Published

A nostalgic A-Z of the most special and well-remembered 60s, 70s and 80s cars, with stylish illustrations accompanied by warm, humorous personal memories. Designer and illustrator Roy McCarthy explores the cars that made a big impression on him in his younger days, from the sludge-coloured, disappointing Austin Allegro his father brought home in 1975 to the Ford Zephyr he coveted from afar on the way to school. The evocative, colourful illustrations form a visual feast of

late 20th-century driving, featuring all the cars drivers of a certain age will remember: the Hillman Imp, the Triumph Dolomite, the Opel Kadett, the Renault 5, and even the lowly Yugo 45 - a whole alphabet's worth, in fact! The perfect gift for anyone who's ever owned, been driven around in or hankered after one of these motoring icons. Word count: 15,000

This casebook focuses on three themes: legal, administrative, and policy issues associated with regulating children rather than adults; procedural and substantive implications of a justice system that emphasizes treatment rather than punishment; and tensions between discretion and rules that occur when states treat children rather than punish adults. It incorporates empirical evaluations and developmental psychological research on adolescent competence and presents criminological studies of controversial issues such as gender and racial disparities in juvenile justice administration. It also examines pretrial detention and alternative sentencing options available to juvenile courts and discusses how and when states try youths in criminal court. New to this edition are the Supreme Court's most recent decisions on the jurisprudence of youth: Eighth Amendment decisions that recognized that children are different and limit judges' authority to impose life without parole; Fifth Amendment decisions that reappraise the impact of youthfulness during interrogation; and Fourth Amendment decisions that limit school officials authority to search.

Since its introduction, the Skyline GT-R has been the undeniable king of the tuner CAR world. This book explains why. Along with an overview of Skylines since their debut in 1957, Author Alex Gorodji gives in-depth reviews of the last four generations of GT-Rs, including the new-for-2008 V35 - the first iteration of the car to be sold in the U.S. Paying special attention to technical aspects such as the all-wheel steering and drive systems, the chassis, and the legendary six-cylinder twin-turbocharged engine, his work explains the GT-R to those who already admire the car, and to those who wonder what the excitement is all about.
