The World Drug Situation

John Wiley & Sons
'A patient is standing in
the middle of the river. He

gazes across the water to the city and the mountain above where the sun is setting. His back is turned to the hospital. The nurses are waiting for him patiently on the river bank. He seems uncertain whether to cross the river or to return. There is no danger. He is on the edge, in an in-between space, as is the hospital where I have worked as a specialist psychiatrist for over twenty-five years.' For many of us, what lies beyond conventional portrayals of mental illness is often shrouded

in mystery, misconception and fear. Dr Sean Baumann spent decades as a psychiatrist at Valkenberg Hospital and, through his personal engagement with patients' various forms of psychosis, he describes the lived experiences of those who suffer from schizophrenia, depression, bipolar and other disorders. The stories told are authentic, mysterious and compelling, representing both vivid expressions of minds in turmoil and the struggle to give form and

meaning to distress. The author seeks to describe these encounters in a respectful way, believing that careless portrayals of madness cause further suffering and perpetuate the burden of stigma. Baumann argues cogently for a more inclusive way of making sense of mental health. With sensitivity and empathy, his enquiries into the territories of art, psychology, consciousness, otherness, free will and theories of the self reveal how mental illness raises

questions that affect us all. Madness is illustrated by award-winning artist Fiona Moodie.

Chronic Non-Communicable Diseases (NCDs) are still widely

perceived as diseases of affluence and not therefore public health priorities for low and middle income (developing) countries. This book focuses on chronic non communicable diseases (NCDs) in Low Middle Income Countries (LMIC). Currently, NCDs appear to be permeating the globe, with an increasing trend in LMIC. The increasing prevalence of NCDs in these countries is attributed to rapid urbanisation, population ageing, globalisation and

industrialisation, all of which result in marked changes in patterns of consumption of food and alcohol, increased tobacco use and sedentary lifestyles, high levels of stress and low levels of physical activity. The burden of NCDs is likely to increase tremendously over the coming decades unless there is appropriate action taken to address the risk factors.

AfEM Handbook of Acute and Emergency Care (Medical) 2e John Wiley & Sons

In this new biography of Chris Barnard we not only learn about the life of South Africa's most famous surgeon, from his

Beaufort West childhood through his studies locally and abroad to his prominent marriages – and divorces – but James Styan also examines the impact of the historic heart transplant on Barnard's personal life and South African society at large, where apartheid legislation often made the difficulties of medicine even more convoluted. The role of black medical staff like Hamilton Naki is explored, as is the intense rivalry that arose between other famous heart surgeons and Barnard.

How did Barnard manage to beat them all in this race of life and death? How much did his famous charisma have to do with it all? And in the light of his later years, his subsequent successes and considerable failures, what is Barnard's legacy today? Styan covers it all in this fascinating new account of a real heartbreaker.

The AFEM Handbook of Acute and Emergency Care guides the reader through the approach to

the patient in a low resource setting (e.g. basic medications and interventions, with a goal to stabilisation and transfer), a moderately resourced setting (e.g. where an x-ray machine and oxygen are available), or a setting with full resources (e.g. with a CT scanner and NIPPV). This unique stratified approach is tailored to the specificities of the African context. This second edition presents updated clinical management recommendations, an expanded section on

unstable patients, a new section on palliative care, and several of the new emergency care outputs from WHO.

Emergency medical personnel and physicians need an accurate, concise toxicology guide to properly diagnose and treat patients that have been poisoned. Such a guide is critical in a region or environment in which medical personnel cannot connect to a centralized poison control center or database. By referring to *Emergency Toxicology:*

Management of Common Poisons, medical professionals can quickly identify and counteract the toxins that threaten their patients. This clear, thorough compilation provides guidelines for treating poisoning cases, and includes current toxicological information on commonly encountered drugs, pesticides, household products, industrial chemicals, environmental toxins, heavy metals, and various miscellaneous agents. By briefly describing the use,

mechanisms of toxicity, toxic dose, diagnosis, and clinical features of each substance, this book enables emergency personnel and physicians to expertly manage both the prehospital and hospital portions of a patient's ordeal, saving lives and accelerating recovery time.

Nuclear Medicine and PET/CT - E-Book John Wiley & Sons

For those fortunate enough to reside in the developed world, death before reaching a ripe old age is a tragedy, not a fact of life. Although aging and dying are not diseases, older Americans are subject to the most egregious marketing in the name of "successful aging" and "long life," as if both are commodities. In *Rethinking Aging*, Nortin M. Hadler examines health-care choices offered to aging

Americans and argues that too often the choices serve to profit the provider rather than benefit the recipient, leading to the medicalization of everyday ailments and blatant overtreatment. *Rethinking Aging* forewarns and arms readers with evidence-based insights that facilitate health-promoting decision making. Over the past decade, Hadler has established himself as a leading voice among those who approach the

menu of health-care choices with informed skepticism. Only the rigorous demonstration of efficacy is adequate reassurance of a treatment's value, he argues; if it cannot be shown that a particular

treatment will benefit the patient, one should proceed with caution. In *Rethinking Aging*, Hadler offers a doctor's perspective on the medical literature as well as his long clinical experience to help readers assess their

health-care options and make informed medical choices in the last decades of life. The challenges of aging and dying, he eloquently assures us, can be faced with sophistication, confidence, and grace.
