Nonhuman voices in Anglo-Saxon literature and material culture uncovers the voice and agency possessed by nonhuman things across Anglo-Saxon literature and material culture. It makes a new contribution to 'thing theory' and rethinks conventional divisions between animate human subjects and inanimate nonhuman objects in the early Middle Ages. Anglo-Saxon writers and craftsmen describe artefacts and animals through riddling forms or enigmatic language, balancing an attempt to speak and listen to things with an understanding that these nonhumans often elude, defy and withdraw from us. But the active role that things have in the early medieval world is also linked to the Germanic origins of the word, where a þing is a kind of assembly, with the ability to draw together other elements, creating assemblages in which human and nonhuman forces combine.

This book explores the various historical and cultural aspects of scientific, medical and technical exchanges that occurred between central Europe and Asia. A number of papers investigate the printing, gunpowder, guncasting, shipbuilding, metallurgical and drilling technologies while others deal with mapping techniques, the adoption of written calculation and mechanical clocks as well as the use of medical techniques such as pulse taking and electrotherapy. While human mobility played a significant role in the exchange of knowledge, translating European books into local languages helped the introduction of new knowledge in mathematical, physical and natural sciences from central Europe to its periphery and to the Middle East and Asian cultures. The book argues that the process of transmission of knowledge whether theoretical or practical was not a simple and one-way process from the donor to the receiver as it is often admitted, but a multi-dimensional and complex cultural process of selection and transformation where ancient scientific and local traditions and elements. The book explores the issue from a different geopolitical perspective, namely not focusing on a singular recipient and several points of distribution, namely the metropolitan centres of science, medicine, and technology, but on regions that are both recipients and distributors and provides new perspectives based on newly investigated material for historical studies on the cross scientific exchanges between different parts of the world.

The Anarchist Cookbook will shock, it will disturb, it will provoke. It places in historical perspective an era when "Turn on, Burn down, Blow up" are revolutionary slogans of the day. Says the author "This book... is not written for the members of fringe political groups, such as the Weatherman, or The Minutemen. Those radical groups don't need this book. They already know everything that's in here. If the real people of America, the silent majority, are going to survive, they must educate themselves. That is the purpose of this book." In what the author considers a survival guide, there is explicit information on the uses and effects of drugs, ranging from pot to heroin to peanuts. There is detailed advice concerning electronics, sabotage, and surveillance, with data on everything from bugs to scramblers. There is a comprehensive chapter on natural, non-lethal, and lethal weapons, running the gamut from cattle prods to sub-machine guns to bows and arrows.

Although respiratory syncytial virus (RSV) has been a high priority for vaccine development for over 50 years now, still no vaccine is available and none has yet demonstrated sufficient promise to move to licensure. The success of RSV immune prophylaxis and the availability of ever more powerful tools to study the immune response and pathogenesis of disease, combined with the ability to construct a wide variety of vaccines using different vaccine platforms, give us grounds to believe that an RSV vaccine is within reach. This book brings together in one source what is currently known about the virus: its clinical and epidemiologic features; the host response and pathogenesis of the disease; vaccines, vaccine platforms, and treatment; and animal and tissue culture models of RSV infection. It is designed to organize the critical information relevant to RSV vaccine development, facilitate the assimilation of data, and speed progress toward producing a safe and effective vaccine. *People of the Rainbow* Manchester University Press

This collection of essays explores the history of Russian imperialism, an especially pertinent topic in light of the newly democratic country's entrance into the geopolitical forum—the country's tenuous relationship with Europe was anticipated by Russian historian Nicholas Danilevskii. Some may argue conflicts such as Chechnya are remnants of the imperial thirst for dominance, and that the ever-evolving nation is still fighting old wars over her image as an empire. The works contained in this book trace some of these encounters, and in turn, provide a backdrop for those of today.

"Derek Zumbro chronicles this key military campaign from a unique and fresh perspective - that of the defeated German soldiers and civilians caught in the final maelstrom of the war's western front." "Zumbro chronicles the relentless assault on the Ruhr Pocket through German eyes, as the Allied juggernaut battered the region's cities, villages, and homes into submission. He tells of children pressed into service by a desperate Nazi regime - and of even more desperate parents trying to save their sons from sacrifice at the eleventh hour. He also tells of unspeakable conditions suffered by foreign laborers, POWs, and political opponents in the Ruhr Valley and of the mass graves that gave Allied soldiers a grisly new understanding of their enemy." "Zumbro also recounts the story of Field Marshal Walter Model's final hours. His eventual suicide effectively ended the existence of the

Wehrmacht's once-formidable Army Group B after being pursued, methodically encircled, and finally destroyed by U.S. and British forces. Through interviews with surviving members of Model's former staff, Zumbro has uncovered the attitudes of beleaguered officers that official records could never convey." "Other interviews with former soldiers reveal the extent to which Allied bombing contributed to the rapid deterioration of German combat effectiveness and tell of civilians begging soldiers to abandon the war. Zumbro's research reveals the identities of specific characters discussed in previous works but never identified, describes the final hours of German officers executed for the loss of the bridge at Remagen, and offers new insight into Model's acquiescence to Hitler in military affairs."--BOOK JACKET.

The central role of the ribonucleic acids (RNA) in mediating the expression of information encoded in DNA in living cells is now well established. Research in this area of biology continues at a remarkable rate, and new and significant information appears almost daily in a wide range of journals, published symposia and specialist reviews. The diverse nature of this information makes it difficult for the newcomer to the field of RNA biochemistry to obtain a general view of established concepts, current activity, and new advances. Moreover, the reviews available are frequently concerned with insular aspects of these Ubiquitous molecules, or in the case of text books, the subject is treated as part of a general outline of proper ties of nucleic acids and thus may be superficial. The authors of the chapters in this collection attempt to provide a comprehensive, though not overly detailed, outline of the biological roles of RNA. They have written for students with basic training in biochemistry, but otherwise with a wide variety of biological interests-plant physiology, virology, organelle biochemistry, genetics, cell biology, differentiation and development. Viral RNA, which was dealt with as a separate chapter in the first edition, has been deleted from this edition because it is an unman ageably large single topic, and at the same time is addressed in a number of ways in many different places in the book.

This book not only records the significant events of Canadian aviation but also pays tribute to the 'forgotten flyers who flew by guess and by God or with calculating caution - for the sheer love of flying - in the early days.' The opening chapter recounts the first tentative experiments with that overgrown monster, the flying machine - at this stage, the glider. Next come the Barnstormers, the

first professional airmen, trying desperately to wrest a living from the air, pioneering in the field of practical flying as little more than vaudeville performers. These were the days of daring aero-acrobatics and tense and crowded air-meets. The First World War saw a tremendous advance in technical manoeuvres and in pilot skill; the first aviation school was established in Toronto, where the War Birds learned to fly. An unparalleled boom in aviation followed the war. Public interest had been aroused by the celebrated achievement of Canada's Air Force, and many young men, the restlessness of the war still in them, were obsessed by the itch to fly again. The dollar-a-minute days marked the beginning of passenger travel and a steady increase in experimental flying, to bear its practical fruit in days to come. The next chapter is one of heroic enterprise - the conquest of the Atlantic and the spanning of the Continent. No less epic is the history of the bush pilots who tamed the Canadian North. We must be grateful to Mr. Ellis for rescuing from obscurity this important chapter in our history.

From the air, the Pacific island of Iwo Jima looks like a large, gray pork chop. Its strategic location, midway between the U.S. B-29 airfields on the Marianas Islands and the Japanese home islands meant that it had to be seized no matter what the cost. On February 19, 1945, the invasion of Iwo Jima was launched. It became the greatest battle fought by the U.S. Marine Corps in World War II. From it came the most famous image of the war, the raising of the flag on Mount Suribachi. When it ended a month later, the Marines had suffered 20,000 casualties -- almost 5,000 men killed in action. And an astonishing twenty-six Marines were awarded America's highest decoration for valor, the Medal of Honor. Book jacket.
