This classic of advanced
statistics is geared toward

graduate-level readers and uses the concepts of gambling to develop important ideas in probability theory. The authors have distilled the essence of many years' research into a dozen concise chapters. "Strongly recommended" by the Journal of the American Statistical Association upon its initial publication, this revised and updated edition features contributions from two well-known statisticians that include a new Preface, updated references, and findings

from recent research. Following an introductory chapter, the book formulates the gambler's problem and discusses gambling strategies. Succeeding chapters explore the properties associated with casinos and certain measures of subfairness. Concluding chapters relate the scope of the gambler's problems to more general mathematical ideas, including dynamic programming, Bayesian statistics, and stochastic processes. University Press
This collection of the proceedings of the 3rd conference on bi- and multilingual universities, held at the Free University of Bozen-Bolzano from 20 to 22 September 2007,

tries to give a state-of-the-art insight into theoretical and practical approaches towards implementing bi- and multilingual models and policies in higher education institutions in various parts of the world. *Color and Colorimetry. Multidisciplinary Contributions* University of Pennsylvania Press Advances in discrete mathematics are presented in this book with applications in theoretical mathematics and interdisciplinary research. Each chapter

presents new methods and techniques by leading experts. Unifying interdisciplinary applications, problems, and approaches of discrete mathematics, this book connects topics in graph theory, combinatorics, number theory, cryptography, dynamical systems, finance, optimization, and game theory. Graduate students and researchers in optimization, mathematics, computer science, economics, and physics will find the wide range of interdisciplinary

topics, methods, and applications covered in this book engaging and useful.

The book serves as a first introduction to computer programming of scientific applications, using the

high-level Python language. The exposition is example and problem-oriented, where the applications are taken from mathematics, numerical calculus, statistics, physics, biology and finance. The book teaches "Matlab-style" and procedural programming as well as object-oriented programming. High school mathematics is a required background and it is advantageous to study classical and numerical one-variable calculus in parallel with reading this

book. Besides learning how to program computers, the reader will also learn how to solve mathematical problems, arising in various branches of science and engineering, with the aid of numerical methods and programming. By blending programming, mathematics and scientific applications, the book lays a solid foundation for practicing computational science. From the reviews: Langtangen ... does an excellent job of introducing programming

as a set of skills in problem solving. He guides the reader into thinking properly about producing program logic and data structures for modeling real-world problems using objects and functions and embracing the object-oriented paradigm. ... Summing Up: Highly recommended. F. H. Wild III, Choice, Vol. 47 (8), April 2010 Those of us who have learned scientific programming in Python 'on the streets' could be a little jealous of students who have the

opportunity to take a course out of Langtangen's Primer." John D. Cook, The Mathematical Association of America, September 2011 This book goes through Python in particular, and programming in general, via tasks that scientists will likely perform. It contains valuable information for students new to scientific computing and would be the perfect bridge between an introduction to programming and an advanced course on

numerical methods or computational science. Alex Small, IEEE, CiSE Vol. 14 (2), March /April 2012 "This fourth edition is a wonderful, inclusive textbook that covers pretty much everything one needs to know to go from zero to fairly sophisticated scientific programming in Python..." Joan Horvath, Computing Reviews, March 2015 Walks in Rome Cua Studies in Canon Law This volume is the first comprehensive commentary on the fourth book of Martial's

epigrams: it focuses on literary matters and realia in order to clarify each poem and to offer an aesthetic account of the book as a whole. Italian Pocket Dictionary Routledge Ptolemy, considered a proto-Humanist by some, combined the principles of Northern Italian republicanism with Aristotelian theory in his De Regimine Principum, a book that influenced much of the political thought of the later Middle Ages, the Renaissance, and the

early modern period. He was the first to attack kingship as despotism and to draw parallels between ancient Greek models of mixed constitution and the Roman Republic, biblical rule, the Church, and medieval government. In addition to his translation of this important and radical medieval political treatise, written around 1300, James M. Blythe includes a sixty-page introduction to the work and provides over 1200 footnotes that trace Ptolemy's sources, explain his references,

and comment on the text, the translation, the context, and the significance.

The mass media are of paramount importance in the formulation and transmission of messages about key developments of global significance, such as terrorism and the war in Iraq, yet the key mediating role of translation in the reception of speeches and addresses of figures like Osama Bin Laden and

Saddam Hussein has remained largely invisible. Incorporating the results of extensive fieldwork in key global news organizations such as Reuters, Agence France Press and Inter Press Service, this book addresses central issues relating to the new pressures on translation arising from globalization, analyzing new texts from major news agencies as well as alternative media organizations. Co-written by Susan Bassnett, a leading figure in the field of translation studies, this

book presents close readings of different English versions of key Arabic texts circulated in Western media to demonstrate the ways in which a cultural and religious 'Other' is framed in different media.

McGraw-Hill Science, Engineering & Mathematics

This book introduces the Age of Justinian, the last Roman century and the first flowering of Byzantine culture. Dominated by the policies and personality of

emperor Justinian I (527–565), this period of grand achievements and far-reaching failures witnessed the transformation of the Mediterranean world. In this volume, twenty specialists explore the most important aspects of the age including the mechanics and theory of empire, warfare, urbanism, and economy. It also discusses the impact of the great plague, the codification of Roman law, and the many religious upheavals taking place at the time.

Consideration is given to imperial relations with the papacy, northern barbarians, the Persians, and other eastern peoples, shedding new light on a dramatic and highly significant historical period.

How to Gamble If You Must Multilingual Matters Translation, accessibility and the viewing experience of foreign, deaf and blind audiences has long been a neglected area of research within film studies. The same applies to the film industry, where current

distribution strategies and exhibition platforms severely underestimate the audience that exists for foreign and accessible cinema. Translated and accessible versions are usually produced with limited time, for little remuneration, and traditionally involving zero contact with the creative team. Against this background, this book presents accessible filmmaking as an alternative approach, integrating translation and accessibility into the filmmaking process

through collaboration between translators and filmmakers. The book introduces a wide notion of media accessibility and the concepts of the global version, the dubbing effect and subtitling blindness. It presents scientific evidence showing how translation and accessibility can impact the nature and reception of a film by foreign and sensory-impaired audiences, often changing the film in a way that filmmakers are not always aware of. The book includes clips from the

award-winning film *Notes on Blindness* on the Routledge Translation Studies Portal, testimonies from filmmakers who have adopted this approach, and a presentation of the accessible filmmaking workflow and a new professional figure: the director of accessibility and translation. This is an essential resource for advanced students and scholars working in film, audiovisual translation and media accessibility, as well as for those (accessible) filmmakers

who are not only concerned about their original viewers, but also about those of the foreign and accessible versions of their films, who are often left behind.

This volume brings together an international team of scholars to

debate Cicero's role in the narrative of Roman law in the late Republic - a role that has been minimised or overlooked in previous scholarship. This reflects current research that opens a larger and more complex debate about the nature of law and of the legal profession in the last century of the Roman Republic.

Discrete Mathematics with Applications, Metric Edition BRILL

This volume presents an in-depth analysis of mock politeness, bringing together research from

different academic fields and investigating a range of first-order metapragmatic labels for mock politeness in British English and Italian. It is the first book-length theorisation and detailed description of mock politeness and, as such, contributes to the growing field of impoliteness. The approach taken is methodologically innovative because it takes a first-order metalanguage approach, basing the analysis on behaviours which participants themselves

have identified as impolite. Furthermore, it exploits the affordances of corpus pragmatics, a rapidly developing field. *Mock Politeness in English and Italian: A corpus-assisted metalanguage analysis* will be of interest to scholars and postgraduate students researching im/politeness and verbal aggression, in particular those interested in im/politeness implicatures and non-conventional meanings.

DISCRETE MATHEMATICS

WITH APPLICATIONS, 5th Edition, Metric Edition explains complex, abstract concepts with clarity and precision and provides a strong foundation for computer science and upper-level mathematics courses of the computer age. Author Susanna Epp presents not only the major themes of discrete mathematics, but also the reasoning that underlies mathematical thought. Students develop the ability to think abstractly as they study the ideas of logic and proof. While learning

about such concepts as logic circuits and computer addition, algorithm analysis, recursive thinking, computability, automata, cryptography and combinatorics, students discover that the ideas of discrete mathematics underlie and are essential to today's science and technology.

Translation and

Opposition is an edited volume that brings

together cultural and sociological perspectives by examining translation through the prism of linguistic/cultural hybridity and inter/intra-social agency. In a collection of diverse case studies, ranging from the translation of political texts to interpreting in concentration camps, the book explores issues of power struggle, ideology, censorship and identity construction. The contributors to the volume show how translators, interpreters and subtitlers as

mediators put their specific professional and ethical competences to the test by treading the dividing lines between constellations of 'in-groups' and cultural or political 'others'.
The Oxford Handbook of Roman Law and Society Legas Publishing
 Den Erwagungsgrunden der Rom I-VO zufolge ist es "im Interesse eines reibungslos funktionierenden Binnenmarkts" notwendig, "den Ausgang von Rechtsstreitigkeiten vorhersehbarer zu

machen und die Sicherheit in Bezug auf das anzuwendende Recht sowie den freien Verkehr gerichtlicher Entscheidungen zu fordern". Um diese Argumentation zu durchdringen, ist eine Vorgehensweise nötig, die sich kritisch mit dem komplexen Verhältnis zwischen Rechtsverfahren und Marktprozess auseinandersetzt. Der vorliegende Band konzentriert sich auf die moderne ökonomische Analyse des Vertragsrechts sowie auf

den Konflikt zwischen Rechtssicherheit und Rechtskongruenz. In seinem Fazit weist der Autor auf die dringende Notwendigkeit einer neuen Vertragsrechtstheorie hin. *Monitore dei tribunali* Hansebooks
The Oxford Handbook of Roman Law and Society surveys the landscape of contemporary research and charts principal directions of future inquiry. More than a history of doctrine or an account of jurisprudence, the Handbook brings to

bear upon Roman legal study the full range of intellectual resources of contemporary legal history, from comparison to popular constitutionalism, from international private law to law and society, thereby setting itself apart from other volumes as a unique contribution to scholarship on its subject. The Handbook brings the study of Roman law into closer alignment and dialogue with historical, sociological, and anthropological research into law in other

periods. It will therefore be of value not only to ancient historians and legal historians already focused on the ancient world, but to historians of all periods interested in law and its complex and multifaceted relationship to society. *Mock Politeness in English and Italian* OECD Publishing
With nearly 400 scores to his credit, Ennio Morricone is one of the most prolific and influential film composers working today. In *Composing for the Cinema*, Morricone and

musicologist Sergio Miceli present a series of lectures on the composition and analysis of film music. Adapted from several lectures and seminars, these lessons show how sound design can be analyzed and offer a variety of musical solutions to many

different kinds of film. Drawing upon scores by himself and others, the composer also provides insight into his relationships with many of the directors with whom he has collaborated, including Sergio Leone, Giuseppe Tornatore, Franco Zeffirelli, Warren

Beatty, Ridley Scott, Roland Joffé, the Taviani Brothers, and others. Delivered in a conversational mode that is both comprehensible and interesting, this groundbreaking work intertwines analysis with practical details of film music composition.
