Contemporary American Science Fiction Film explores and interrogates a diverse variety of popular and culturally relevant American science fiction films made in the first two decades of the new millennium, offering a ground-breaking investigation of the impactful role of genre cinema in the modern era. Placing one of the most popular and culturally resonant American film genres broadly within its rich social, historical, industrial, and political context, the book interrogates some of the defining critical debates of the era via an in-depth analysis of a range of important films. An international team of authors draw on case studies from across the science fiction genre to examine what these films can tell us about the time period, how the films themselves connect to the social and political context, how the fears and anxieties they portray resonate beyond the screen, and how the genre responds to the shifting coordinates of the Hollywood film industry. Offering new insights and perspectives on the cinematic science fiction genre, this volume will appeal primarily to scholars and students of film, television, cultural and media studies, as well as anyone interested in science fiction and speculative film.

Since the 1927 release of Fritz Lang's pioneer film Metropolis, science fiction cinema has largely been regarded a Western genre. In *Simultaneous Worlds*, Jennifer L. Feeley and Sarah Ann Wells showcase authors who challenge this notion by focusing on cinemas and cultures, from Cuba to North Korea, not traditionally associated with science fiction. This collection introduces films about a metal-eating monster who helps peasants overthrow an exploitative court, an inflatable sex doll who comes to life, a desert planet where matchsticks are more valuable than money, and more. *Simultaneous Worlds* is the first volume to bring a transnational, interdisciplinary lens to science fiction cinema. Encountering some of the best emerging and established voices in the field, readers will become immersed in discussions of well-known works such as the Ghost in the Shell franchise and Neill Blomkamp's District 9 alongside lesser-known but equally

fascinating works by African, Asian, European, and South American filmmakers. Divided into five parts that cover theoretical concerns such as new media economies, translation, the Global South, cyborgs, and socialist and postsocialist cinema, these essays trace cinema's role in imagining global communities and power struggles. Considering both individual films and the broader networks of production, distribution, and exhibition, *Simultaneous Worlds* illustrates how film industries across the globe take part in visualizing the perils of globalization and technological modernity. Ultimately, this book opens new ways of thinking about world cinema and our understanding of the world at large.

This book gathers together many of the illuminating essays on science fiction and fantasy film penned by a major critic in the SF field. The pieces are roughly organized in the chronological order of when the movies and television programs being discussed first appeared, with essays providing more general overviews clustered near the beginning and end of the volume, to provide the overall aura of a historical survey. Although this book does not pretend to provide a comprehensive history of science fiction and fantasy films, it does intermingle analyses of films and TV programs with some discussions of related plays, novels, stories, and comic books, particularly in the essays on *This Island Earth* and *2001: A Space Odyssey* and its sequels. Inciteful, entertaining, and full of intelligent and witty observations about science fiction and its sometimes curious relationship with the visual media, these essays will both delight and entertain critics, fans, and viewers alike.

Science fiction films celebrate and critique the impact of a burgeoning technology on the world's cultural, political, and social milieu. The Machine Age, roughly delineated by the two decades between World Wars, was a watershed period during which modern society entered into an ambiguous embrace with technology that continues today. J. P. Telotte carefully blends film, technology, cultural, and genre studies to illuminate this nearly forgotten era in our cinematic history and to show, through analysis of classics like *The Invisible Ray*, *Metropolis*, and *Things to Come*, how technology played a major role as motif, "actor," and producer. What he also discovers as he ranges among the American, British, Russian, French, and German science fiction cinema — as well as mainstream films, figures, and cultural products such as the New York World's Fair — is a

fundamental ambivalence, embedded in the films themselves, about the very machine-age ethos they promoted. Even as advances in the technical apparatus of filmmaking elevated it from mere entertainment to a medium of general communication and genuine artistic expression, Machine Age science fiction films remained curiously distant from and often skeptical of the very machines on which their narratives focus. The resulting tensions, Telotte writes, "thus seem to intersect with those implicit in a Western world that was struggling with its own transition into the modern," rendering the films' task inevitably paradoxical and difficult
