While variation within
individual languages

has traditionally been
focused upon in
sociolinguistics, its
relevance for
grammatical theory
has only recently been
acknowledged. On the
methodological side,
there is an ongoing
competition between
large-scale statistical
analyses and
investigations that rely
more heavily on
introspection and
elicited grammaticality
judgements. The aim
of this volume is to
bridge the 'cultural
gap' between
empirical-variationist
and formal-theoretical
approaches in
linguistics. The volume
offers case studies that
seek to combine
corpus-based and
competence-based
approaches to the
description of
variation. In doing so, it
opens up new avenues

for locating and analyzing variability, both at the level of the individual speaker and between speakers of different dialects and generations. The contributions document the plurality of current research into models of grammatical competence that live up to the challenge of variationist data. More specifically, parameter-based (e.g. Minimalist), constraint-based (e.g. Optimality Theoretic), and usage-based (e.g. Construction Grammar) approaches to variation are discussed. The volume therefore is of interest to a broad public within linguistics, including syntacticians of different theoretical persuasion, morphologists and sociolinguists. While a majority of

contributions addresses facets of variation in English and German, the volume also includes variationist studies written by specialists of French, Dutch, Icelandic, and Uralic. *Harry Stottelmeiers Entdeckung* ACU Press Kann man mit Filmen philosophieren? Ja - und dieses Buch zeigt Ihnen, wie. Entworfen wird eine Methodik des Philosophierens mit Filmen, die sowohl im Fachunterricht als auch bei alltäglichen Begegnungen mit dem Medium angewendet werden kann. Der Autor richtet sich dabei aber nicht an eine philosophische Elite, sondern an jeden, der mit Filmen philosophieren möchte. Einzelne Facetten der Methodik werden Ihnen handbuchähnlich und

 Science Fiction in Translation: Perspectives on the Global Theory and Practice of Translation focuses on the process of translation and its implications. The volume explores the translation of works of science fiction (SF) from one language to another and the translation of SF tropes, terms, and ideas of SF theory into cultures outside the West. Providing a comprehensive examination of the

state of translation into English, the essays consider how representative the body of translated work of SF is from the source language/culture. It also considers the social, political, and economic choices in selecting a work to translate. The book illustrates the dramatic growth both in SF production outside the Anglosphere, the translation of works from other languages into English, and the practice of translating English-language SF into other languages. Altogether, the essays map the theory, practice, and business of SF translation around the world.

 Caption Collage:

Preposterous Poetry.
This collection of abstract poetry is not only about detachment from the digital social media space, its main settings is the scrolling space itself - it is abrupt, blurry, and has no start or finish line. The captions come originally from my social media account and are glued into poetry based on my artistic taste: think of it as an artful collage made from words on a canvas. The captions have been written over the period of 5 years. For me, they were always little works of art! In this collection they are no longer descriptions to photos but poems, with its own meaning and existence - no longer secondary. Detached from the whole combination with the

photo where together they made sense, those newly collided lines become standalone carriers of new meanings - therefore, preposterous. The abstractions behind each poem carry vivid realisation of a blurry connotation behind existence in today's social media space and outside of it. I have always prioritised words, so in the world where words don't matter, here is a space for them to grow into something more powerful than a caption; an art object, a poem, a work of 5 years of my life that took place in front of everyone and everyone was looking but not actually seeing. Few people notice the caption under a photo, so here is a space for

captions to exist on their own, independently. Photos are captions to my wor(L)ds. P.S. In the process of detachment of the captions from photos, no posts were damaged.

The Adventure of French Philosophy
Springer Nature
Between September and December 2016, Ludovic Ballard set out to document how Americans were making sense of the campaigns and the constant hum of media coverage in the run up to and aftermath of the contentious general election. On his 13,000-mile road trip across the country, he called on twenty cities and attended major events, such as the inauguration and the Women's March in Washington, DC. The

result of this four-month road trip is American Readers at Home, which collects interviews with more than two hundred people living in cities and small towns across the United States. With print media struggling to survive in an age of twenty-four-hour real-time news and social media feeds, American Readers at Home presents a new, personalized model of story-telling in journalism that reaches audiences by emphasizing how everyday news items relate to personal experience and form people's views. Throughout the trip, Ballard and his collaborators spoke with a wide variety of American citizens, reflecting the diversity of perspectives in the

contemporary United States, including people of vastly different social, economic, and cultural backgrounds and both everyday citizens as well as politicians and celebrities. Through their statements and the expressive full-page color portraits featured in the book, we are encouraged to consider their perspectives--their hopes, fears, and expectations both before and after the election. Filled with fascinating insights, *American Readers at Home* is the comprehensive archive of this fascinating media project originally published across multiple platforms, including the project's website and social media channels, as well as local print and

online newspapers and radio and television stations that distributed the interviews. It forms a highly original record of the United States at a time when at a time when the country was facing great uncertainty and change.

A Life Teaching Thinking Temple University Press
Once considered a question of an international order based on consolidated statehood and homogeneous social communities within national borders, global order has become a question of alternative political articulations, resistance movements, and cultural diversity, among others. This book first critically analyzes the conditions

for the struggles of theorizing global normative order in political and IR theory. Second, to make sense of the presence of difference and possibility for global normative order in view of the simultaneous absence of first foundations, the study draws on post-foundational thinking based on the seminal work of German philosopher Martin Heidegger and Argentine political theorist Ernesto Laclau. Finally, the author develops a theoretical framework for a hauntological approach to global normative order that provides an alternative and theoretically coherent explanation for the emergence of global order. This is of interest to scholars as

well as practitioners (including activists) concerned with global social relations, global political discourse, and the construction of global identity and normative order(s).

This book gives a comprehensive overview of the symptoms, causes and treatment of Burning Mouth disease and Burning Mouth-like diseases. Burning mouth disease (BMD), also referred to as burning mouth syndrome, is an enigmatic disease for both the patient and the clinician. When the disease is not recognized as such, the patient may

become exposed to a wide variety of redundant treatments, including dental and surgical procedures. The text is science-based including literature from the past decades as well as practice-oriented containing treatment guidelines established on personal experience from the author. Much attention is paid to the symptoms of various diseases that may mimic those of BMD. Neurologic and psychogenic aspects are well covered, as are the many treatment modalities, such as pharmacological and nonpharmacological ones. Step-by-step approaches are outlined in this book to help make an apparently unbearable disease more or less

acceptable to live with. This monograph will be of help for all dental and medical healthcare providers who are involved in the diagnosis and management of patients suffering from BMD and BMD-like symptoms.

This is a textbook for teachers that demonstrates how philosophical thinking can be used in teaching children. It begins with the assumption that what is taught in schools is not (and should not be) subject matter but rather ways of thinking. The main point is that the classroom should be converted into a community of inquiry, and that one can begin doing that with children. Based on the

curriculum that Matt Lipman has developed at the Institute for the Advancement of Philosophy for Children, which he heads, this book describes the curriculum and explains its use. The text is self-contained, however. This revision is thorough-going and incorporates new chapters, as well as new material in old chapters. Part One focuses on the need of educational change and the importance of philosophical inquiry in developing new approaches. Part Two discusses curriculum and teaching methodology, including teacher behavior conducive to helping children. Part Three deals with developing logic skills and moral judgment. It concludes

with a chapter on the sorts of philosophical themes pertinent to ethical inquiry for children: the right and the fair, perfect and right, free will and determinism, change and growth, truth, caring, standards and rules, thinking and thinking for oneself. Education, in this sense, is not a matter of dispensing information; it is the process of assisting in the growth of the whole individual.

The book is an on-the-spot reference for residents and medical students seeking diagnostic radiology fast facts. Its question-and-answer format makes it a perfect quick-reference for personal review and studying for board

examinations and re-certification. Readers can read the text from cover to cover to gain a general foundation of knowledge that can be built upon through practice or can use choice chapters to review a specific subspecialty before starting a new rotation or joining a new service. With hundreds of high-yield questions and answer items, this resource addresses both general and subspecialty topics and provides accurate, on-the-spot answers. Sections are organized by subspecialty and body area, including chest, abdomen, and trauma, and chapters cover the anatomy, pathophysiology, differential diagnosis, hallmark signs, and image features of major diseases and

conditions. Key example images and illustrations enhance the text throughout and provide an ideal, pocket-sized resource for residents and medical students.

Lisa Springer Nature "Ethische Untersuchungen" ist ein Manual, das begleitend zu "Lisa", einer philosophischen Geschichte für Teenager, entwickelt wurde. Es bietet Einführungen in Konzepte wie Identität, Wahrheit, Gerechtigkeit, Freiheit, Menschen- und Tierrechte sowie zahlreiche Diskussionspläne und Übungen, die dazu ermutigen, diese Konzepte zu untersuchen. Ziel ist es, junge Menschen zum Nachdenken über ethische und

moralische Werte anzuregen und sie mit geeigneten philosophischen Werkzeugen auszustatten. Die elf Kapitel von Lisas Geschichte werden im Manual für Lehrende, Eltern und für alle, die an ethischen Fragen interessiert sind, aufbereitet. Ideal vor allem für Pädagog:innen, die das Buch "Lisa" im Ethikunterricht einsetzen wollen.

This book analyses the experiences of multicultural education in nine very different international settings uncovering insights from a vast variety of educational contexts. Taking a multi-critical approach in reporting and discussing problems faced by

increasingly multicultural and multilingual societies the nine case studies reflect radically different assumptions about what counts as 'difference' and what should be the appropriate ways for education systems to respond to differences. While each country's approach seems unique, analysis of the divergent treatments of internal population diversity elicits a genuinely global instance of the increasingly shared phenomenon of cultural pluralism. Discussing various successes and failures of policy enactment, theory, pedagogy and management of diversity, the book isolates both the differences and similarities in the

unique geopolitical and socio-historical contexts of the countries investigated. A key value of the book is that it greatly expands the range of settings, experiences, epistemologies, ontologies and practical experiences that are typically encountered in mainstream discussion of what counts as 'multicultural education'. In effect, all societies are in some way 'dealing with difference' – this volume helps widen the scope of reflection and thus facilitates increased, global 'learning from difference'.

The book you are reading is a translation from Russian into English.
Within a pretty short term this book saw two editions in Russian.
The authors received in spiring responses from readers that both

stimulated our continuing and improving this work and made sure it would not be in vain of us to try to multiply our readers by covering the English-speaking engineering community. When we prepared the present edition, we took into account interests of the Western readers, so we had to make some changes to our text published earlier. These changes include the following aspects. First, we excluded a lot of references and discussions regarding Russian engineering codes. It seems to us those are of no real interest for Western engineers oriented at Eurocode or national construction design regulations.

Lipman examines the impact his program has had and may yet have on the process of education in philosophy.

Harry Stottelmeiers Entdeckung Institute

for the Advancement of Philosophy for Children

In our increasingly complex world, the teaching of thinking has become imperative. Yet evidence shows that our children are not learning how to think. Matthew Lipman, a leading educational theorist, gets to the heart of our educational problems, in *Thinking in Education* and makes profound and workable suggestions for solving those problems.

Thinking in Education describes procedures that must be put in place if students at all levels of education are to become more thoughtful, more reasonable, and more judicious. It recommends that the classroom be converted into a community of inquiry and that the discipline of philosophy be redesigned so as to provide the concepts and values now missing from the curriculum. These recommendations have now been carried out; the community of inquiry is a recognized pedagogical strategy, and traditional academic philosophy has been transformed into a discipline that offers a model of higher-order thinking and an image of what

all education can be.

Philosophy in the Classroom

Harvard University Press
This book brings together the work of more than 25 scholars from different parts of the world who analyze the challenges posed by the new coronavirus and how it can transform the lives of the cities. Through 19 chapters organized into three sections -

experiences, responses and uncertainties - the authors offer a novel perspective about the resilience of the metropolis to face the most important sanitary crisis in the twenty-first century. History shows that cities can innovate and change profoundly in a response to disasters or after suffering an intense crisis, such as a pandemic or dramatic local spread of infectious diseases. In many cases, cities evolve to better urban systems, as literature based on the resilience perspective suggests. From this perspective, this book is a unique contribution to the academic discussion offering a multidisciplinary approach to analyze the impact of COVID-19 in the cities.

This edited book discusses various processes of feedstocks bioconversion such as bioconversion of food waste, human manure, industrial waste, beverage waste, kitchen waste, organic waste, fruit and vegetable, poultry waste, solid waste, agro-industrial waste, cow dung, steroid, lignocellulosic residue, biomass, natural gas etc. Nowadays, the industrial revolution and urbanization have made human life comfortable. However, this requires excess usage of natural resources starting from food and food products, to energy resources, materials as well as chemicals. The excess use of natural

resources for human comfort is expected to high fuel prices, decline natural resources as well as cause a huge hike in the cost of raw materials. These factors are pushing researchers to grow environmentally friendly processes and techniques based on inexpensive and sustainable feedstock to accomplish such worldwide targets. Bioconversion, otherwise called biotransformation, is the change of natural materials, for example, plant or animal waste, into usable items or energy sources by microorganisms.

Bioconversion is an environmentally friendly benevolent choice to supplant the well-established chemical procedures utilized these days for the production of chemicals and fuels. A variety of alternatives advancements are being considered and are directly accessible to acquire diverse valuable end-products through bioprocesses. This book discusses in detail the process and techniques of bioconversion by focusing on the organic feedstock of animal and plant origin. It brings solutions to the bioconversion of various feedstock into value-added products.
