Inspired by the childhood of real-life astronaut Chris Hadfield and brought to

life by Terry and Eric Fan's lush, evocative illustrations, *The Darkest Dark* will encourage readers to dream the impossible. Chris loves rockets and planets and pretending he's a brave astronaut, exploring the universe. Only one problem--at night, Chris doesn't feel so brave. He's afraid of the dark. But when he watches the groundbreaking moon landing on TV, he realizes that space is the darkest dark there is--and the dark is beautiful and exciting, especially when you have big dreams to keep you company.

Gus's workshop is chockful of useless odds and ends. But when his friend Rico comes over with a problem-his scooter seat is way too small for a rhino-Gus finds just the thing to solve it. He creates a fabulous new vehicular contraption with an old lounge chair! One by one Gus's friends bring him their vehicles and Gus solves their troubles with ingenious solutions-a cooling system made with a fridge that doubles as an ice-cream machine, a burst of speed from a rocket blaster. Soon the workshop is almost empty, but the last scraps might be just enough to solve Gus's own problem at the end of a long day.

An offbeat penguin shows his peers the power of individuality in this humorous tale from the author of Pookins Gets Her Way. Tacky is an odd bird. He likes to do splashy cannonballs and greet his companions with a loud "What's happening?" In fact, he's something of an eccentric, which wouldn't be a problem if all the other penguins weren't such...conformists. When intimidating

visitors invade their peaceful, nice, icy land, it'll take a lot more than a bunch of perfect penguins to save the day. Thank goodness Tacky's such an odd bird! "This book is must reading for any kid—or grown-up—who refuses to follow the pack."—Publishers Weekly

It's amazing how easy it is for the tiger to pass himself off as a rug - he enjoys a life of luxury with the rajah's family, snacking on midnight feasts and playing with his children. He goes entirely undetected, until one night, when he risks expulsion from his comfortable abode as burglars break into the palace and he has to decide whether to stay in disguise as a rug - or save the rajah from a horrible beating. However, tigers who live in houses can have happy endings, as seen in this utterly brilliant picture book.

The Darkest Dark Hachette Education

Full and authoritative, this history of the techniques for dealing with geometric questions begins with synthetic geometry and its origins in Babylonian and Egyptian mathematics; reviews the contributions of China, Japan, India, and Greece; and

discusses the non-Euclidean geometries. Subsequent sections cover algebraic geometry, starting with the precursors and advancing to the great awakening with Descartes; and differential geometry, from the early work of Huygens and Newton to projective and absolute differential geometry. The author's emphasis on proofs and notations, his comparisons between older and newer methods, and his references to over 600 primary and secondary sources make this book an invaluable reference. 1940 edition.

The Arains: A Historical Perspective Didier

Edmund Burke's 1791 *Reflections on the Revolution in France* is a strong example of how the thinking skills of analysis and reasoning can support even the most rhetorical of arguments. Often cited as the foundational work of modern conservative political thought, Burke's *Reflections* is a sustained argument against the French Revolution. Though Burke is in many ways not interested in rational close analysis of the arguments in favour of the revolution, he points out a crucial flaw in revolutionary thought, upon which he builds his argument. For Burke, that flaw

was the sheer threat that revolution poses to life, property and society. Sceptical about the utopian urge to utterly reconstruct society in line with rational principles, Burke argued strongly for conservative progress: a continual slow refinement of government and political theory, which could move forward without completely overturning the old structures of state and society. Old state institutions, he reasoned, might not be perfect, but they work well enough to keep things ticking along. Any change made to improve them, therefore, should be slow, not revolutionary. While Burke's arguments are deliberately not reasoned in the 'rational' style of those who supported the revolution, they show persuasive reasoning at its very best.

Sixty Lights is the captivating chronicle of Lucy Strange, an independent girl growing up in the Victorian world. From her childhood in Australia through to her adolescence in England and Bombay and finally to London, Lucy is fascinated by light and by the new photographic technology. Her perception of the world is

passionate and moving, revealed in a series of frozen images captured in the camera of her mind's eye showing her feelings about love, life and loss. In this confident, finely woven and intricate novel Jones has created an unforgettable character in Lucy; visionary, gifted and exuberant, she touches the lives of all who know her.

The effective use of educational assessments is fundamental to improving learning. However, effective use does not refer only to the technical parameters or statistical methodologies. Learning assessments in use today whether large-scale or household surveys or hybrid (smaller, quicker, cheaper or SQC) have varied uses and purposes. The present volume provides a review of learning assessments, their status in terms of the empirical knowledge base, and some new ideas for improving their effectiveness,

particularly for those children most in need. It is argued here that SQC learning assessments have the potential to enhance educational accountability, increase transparency, and support a greater engagement of stakeholders with an interest in improving learning. In addition, countries need a sustained policy to guide assessment choices, including a focus on poor and marginalized populations.

Studies of teachers in the U.S. often document insufficient subject matter knowledge in mathematics. Yet, these studies give few examples of the knowledge teachers need to support teaching, particularly the kind of teaching demanded by recent reforms in mathematics education. Knowing and

Teaching Elementary Mathematics describes the nature and development of the knowledge that elementary teachers need to become accomplished mathematics teachers, and suggests why such knowledge seems more common in China than in the United States, despite the fact that Chinese teachers have less formal education than their U.S. counterparts. The anniversary edition of this bestselling volume includes the original studies that compare U.S and Chinese elementary school teachers' mathematical understanding and offers a powerful framework for grasping the mathematical content necessary to understand and develop the thinking of school children. Highlighting notable changes in the field and the author's work, this new edition includes an updated preface, introduction, and key journal articles that frame and contextualize this seminal work.

The Rainbow from Myth to Mathematics Bloomsbury Publishing

The first edited collection of scholarly essays to focus exclusively on An Collins, this volume examines the significance of an important religious and political poet

from seventeenth-century England. The book celebrates Collins's writing within her own time and ours through a comprehensive assessment of her poetics, literary, religious and political contexts, critical reception, and scholarly tradition. *An Collins and the Historical Imagination* engages with the complete arc of research and interpretation concerning Collins's poetry from 1653 to the present. The volume defines the center and circumference of Collins scholarship for twenty-first century readers. The book's thematically linked chapters and appendices provide a multifaceted investigation of An Collins's writing, religious and political milieu, and literary legacy within her time and ours.

Virtually every volume on mythology contains legends connected with the rainbow and practically all modern textbooks of physics include some exposition of the optical principles which account for the bow. Mankind has been

thinking, talking and writing about the rainbow for thousands of years. The Rainbow: from Myth to Mathematics gathers material from a great number of primary and secondary sources in the hopes that readers may be tempted to study further some aspects of the history of the theory of the rainbow. Includes information on Aristotle, Francis Bacon, the Christian tradition, color, Rene, Descartes, fogbow, Augustin Fresnel, Galileo Galilei, halo, Islamic tradition, Jesuits, Johann Kepler, nature of light, mirrors, Sir Isaac Newton, Olympiodorus, physics, rainbow breadth, reflection, refraction, Robert Grosseteste, Themo Judoci, Witelo, etc.
