As the culminating volume in the DCP3 series, volume 9 will provide an overview of DCP3 findings and methods, a summary of messages and substantive

lessons to be taken from DCP3, and a further discussion of cross-cutting and synthesizing topics across the first eight volumes. The introductory chapters (1-3) in this volume take as their starting point the elements of the Essential Packages presented in the overview chapters of each volume. First, the chapter on intersectoral policy priorities for health includes fiscal and intersectoral policies and assembles a subset of the population policies and applies strict criteria for a low-income setting in order to propose a "highest-priority" essential package. Second, the chapter on packages of care and delivery platforms for universal health coverage (UHC) includes health sector interventions, primarily clinical and public health services, and uses the same approach to

propose a highest priority package of interventions and policies that meet similar criteria, provides cost estimates, and describes a pathway to UHC.

Infection prevention and control is vital within a veterinary setting, but can find itself an automated part of care - and therefore vulnerable to time constraints, forgetfulness and routine. This book is written by experts in the field and uses evidence-based findings to elevate infection prevention to a well understood, dynamic concept, relevant to both veterinary practitioners and nurses in practice. Beginning with an introduction to the importance of infection control, dedicated chapters in this book then consider key principles

such as hand hygiene, personal protective equipment, infection control for the surgical and hospitalised patient, and care for immunosuppressed individuals. Importantly, this book presents an up-to-date exploration of responsible antibiotic use in the context of rising resistance.
