CHANGDER OUTLINE

The goal of this book is to provide essential information on the use of different medicinal plants and their secondary metabolites for the treatment of various fungal diseases affecting human beings, animals and plants. It is divided in four parts: Part I examines the global distribution of plant-derived antifungal compounds, Part II deals with antifungal activities of plant metabolites, Part III includes plants used in Ayurveda and traditional systems for treating fungal diseases, and Part IV discusses the use of plant-derived products to protect plants against fungal diseases.

This book considers the

evolution of medical education over the centuries, presents various theories and principles of learning (pedagogical and andragogical) and discusses different forms of medical curriculum and the strategies employed to develop them, citing examples from medical schools in developed and developing nations. Instructional methodologies and tools for assessment and evaluation are discussed at length and additional elements of modern medical teaching, such as writing skills, communication skills, evidence-based medicine, medical ethics, skill labs and webinars, are fully considered. In discussing these topics, the authors draw upon the personal experience that they have gained in learning, teaching and disseminating knowledge in many parts of the world over the past four

decades. Medical Education in Modern Times will be of interest for medical students, doctors, teachers, nurses, paramedics and health and education planners.

Since ancient times, plants serve as a valuable source of traditional herbal medicines. Unlike modern medicines, herbal medicines have consistently demonstrated health advantages, including a lack of serious adverse side effects, long-lasting

curative impacts and overall cost-effectiveness. Even today, with various modern pharmaceutical medicines commonly available, plant-based medicines and aromatics are increasingly in demand throughout the health sector globally, where they are used not only for the treatment of disease, but also, preventatively for maintaining good health. People are seeking alternatives to modern medical treatments turning to phytomedicine for primary health care. However, an inadvertent consequence of this increased demand for herbal medicines has resulted in medicinal plants being threatened due to their initial small population sizes, narrow distribution areas, habitat specificity, and increasingly destructive non-sustainable harvesting. This book critically examines and reviews the status of medicinal plants and includes several important case studies of representative plant species. It contains information on aspects concerning phytochemistry, natural products, cultivation, conservation techniques, environmental

interactions, and therapeutic features of medicinal aromatic plants. Features Evaluates plants as medicine and aromatics covering pharmacognosy and ecology of plants having therapeutic values. Discusses how plants can play a role in treatment of diseases and as potential therapeutics standards for maintaining good health. Presents conventional and contemporary approaches to conservation of such plants with commercial feasibility.

The history of coffee is much more than the tale of one nonessential good-- it is a lens through which to consider various strands of world history, from food and foodways to religion and economics and sociocultural history. A Rich and Tantalizing Brew traces the history of the coffee bean, beginning with its cultivation and brewing as a private pleasure in the highlands of Ethiopia and Yemen before its emergence as a common comfort, first in the Muslim world, then across the Mediterranean to Italy, other parts of Europe, and beyond to India and the Americas. At each of these stops the

brew gathered ardent aficionados and vocal critics, all the while reshaping the social landscape. Taking its conversational tone from the chats often held over a steaming cup, *A Rich and Tantalizing Brew* offers a critical and entertaining look at how this bitter beverage, with a little help from the tastes that traveled with it--chocolate, tea, and sugar--has connected people to each other both within and outside of their typical circles, inspiring a new context for sharing news, conducting business affairs, and even plotting revolution.

This book examines childcare in ancient Indian health systems from the perspective of developmental psychology. The author extensively studies ancient texts and charts from Ayurveda, Unani, Siddha and Tibetan medicines and analyses how gleanings from these systems can be useful in creating preferred practices for modern childcare systems.

Though the four systems originated in different geographical regions, they share many common core constructs of a holistic approach consisting of mind-body unity. The core of psychological healing in these systems rests on bringing about harmony and balance of disturbed functions through diet, daily regimen and drugs. However, despite commonalities, understanding of childcare in the four systems varies a great deal. The differences seem to be rooted in local

sociocultural, religious and folk healing practices. Remarkably, in all of them, prescriptions of drugs and behaviour are psychologically grounded and uncannily modern from the perspective of developmental psychology. The book raises the following questions as important for further research: whether holistic approaches be adopted for the empirical study of indigenous health systems, where their strength lies; whether personality frameworks identified in the four systems can be incorporated into contemporary medical practice to its advantage; whether preferred childcare practices among the four systems can be studied empirically in current paediatric, psychological and parenting research; and whether faith, if it is of importance to the patient, can be incorporated as an element into contemporary medical practice.

No legal system in the world has aroused as much public interest as Sharia. However, the discourse around Sharia

law is largely focussed on its development and the theories, principles and rules that inform it. Less attention has been given to studying the consequences of its operation, particularly in the area of Islamic criminal law. Even fewer studies explore the actual practice of Islamic criminal law in contemporary societies. This book aims to fill these gaps in our understanding of Sharia law in practice. It deals specifically with the consequences of enforcing Islamic criminal law in Pakistan, providing an in-depth and critical analysis of the application of the Islamic law of Qisas and Diyat (retribution and blood money) in the Muslim world today. The empirical evidence adduced more broadly demonstrates the complications of applying traditional Sharia in a modern state.

Plant science is a vast arena in the sphere of life science dealing with many facets of traditional and modern biology. The subject encompasses botany and allied subject matters including taxonomy, phycology, mycology, pathology, microbiology, genetics, pharmacology, paleo studies, ethnobotany, ecology, anatomy, physiology as different diversified braches. Beside these traditional subjects modern research includes biochemistry, biotechnology, molecular biology, nanotechnology,

herbal drugs, etc. Though majority of the research and studies of the plant science focus on the land plant, but the economic importance of plant species present in waterbodies cannot be neglected due to the huge growing demands and necessity as well. Moreover, air born microbes are also significant as potential pathogens of different diseases. From the beginning of the twenty-first century, it has become evident that the environmental issues are posing threat to mankind, mainly due to loss of forest plants. This also results in the biodiversity loss in a broad sense. This book is an effort to cover many modern aspects of plant science as many as possible, in the light of recent trends of researches. Here, the authors expressed their views in different corners of plant science and focused on the recent researches going on in this direction. We hope this book will be helpful for the readers to generate knowledge in the subject area.

Professor of History at Islamia College Lahore, Professor Muhammad Aslam, wrote about Shah Fateh Ullah Shirazi in 1960s. His Urdu essay on Shah Fateh Ullah tells us the story of this great man, of many talents, who changed Mogul India under Emperor Akbar the Great in the 16th century AD. This Urdu essay was translated by Mohammad Akmal Makhdum, to share the story with English readership. Shah Fateh Ullah Shirazi was a prince in the court of Emperor Akbar the Great, also known as The Great Mogul. He was a migrant from Persia and came to Mogul India in the 16th century AD. He was a renowned scholar and diplomat in the court of Deccan state. After the death of the ruler of Deccan, he was invited by Emperor Akbar to come to his court where the emperor, who became a great admirer and friend of his scholarship, arranged his marriage with emperor's sister-in-law. This made Shah Fateh Ullah a prince, and a relative of the emperor. Fateh Ullah, by his own merit became one of the main advisors of the emperor, on all matters, official and

personal. Fateh Ullah was an inventor, mathematician, architect, diplomat, physician, scholar of literature, languages, religion and wrestling. He invented a gun with 17 barrels; a cannon with multiple barrels; a mechanical cannon cleaner; cranes for heavy lifting; cannons that could be dismantled and transported over hills and re-assembled; cannon barrels that could be screwed apart for ease of transport and re-screwed; air-conditioning and water supply machines for the new Capital of the Mogul Indian Empire: Fateh Pur Sikri. He invented mobile showers and mobile homes for royal court travels; changed the education system and introduced scientific methods in education and the curricula. He became president of all educational authorities in the Mogul Indian Empire. he was a strong influence on how the empire was run and at his untimely death by Typhoid fever, the emperor was inconsolable, weeping frequently and remembering his friend, advisor, physician, inventor, confidante and friend. Few people know about this great man.

Herbal Drugs: Technology And Use

Food and Foodways This book provides in-depth information on many Indian medical practices, including herbal treatments, crude drug preparation, and medicinal botany. This book provides an introduction to the fundamental concepts and practices of the Ayurvedic, Unani, Siddha, and Homeopathic medical systems. In addition to this, the book emphasizes

the quality, safety, efficacy, effectiveness, and stability of herbal products, as well as guidelines for the standardization of herbal drugs, patenting issues, Good Manufacturing Practices (GMP), and regulatory concerns regarding herbal drugs and products. Alternative medicine, which includes herbal medicine, is becoming more popular. Herbal medicine is a significant part of this movement. One of the historical practices that date back to ancient times and makes use of goods derived from nature to treat illness is known as herbalism. Botanical research is the basis for herbal medicine, which treats medical conditions by using plant parts such as seeds, roots, bark, flowers, leaves, and oils. Herbal medicine is also a subfield of ethnobotany. According to the Globe Health Organization (WHO), it is the second most widely used treatment system all over the world. The term "herbal drug technology" refers to a set of processes that are used to transform plant components into goods and medications that have therapeutic value. Today, iv herbal products

are acquiring growing applications in drug research and development, and there is a rising demand for herbal medications around the globe. This is because herbal goods may be generated by blending contemporary scientific approaches with traditional knowledge.

The Marmas (Vital points) are very sensitive, tender and vulnerable points in human body. Injury to them leads to deformity or even to death. Therefore, the knowledge of the Marmas is very essential for physicians and surgeons. This book is an attempt in this direction. Based on 54 verses of Suśruta Saṃhitā

Sāira, Chapter 6, it explains the Ayurvedic concept of Marmas, along with their various types, location in the body, nature, their size, anatomy, physiology, pathology and possible treatments. It also tries to correlate the Ayurvedic Marmas with the vital points in other alternative systems of medicine—Yoga, Unani, Siddha, Homoeopathy and Acupuncture.
