**Barcoding Nature** Prentice Hall

Indian Diaspora World Convention was held in Trinidad in 2017 to commemorate the 1917 decision of the Indian legislature to end further recruitment of Indians for overseas indentured service. The eleven essays in this second volume cover a wide range under the heading 'Charting New Frontiers'. It is a diverse collection, indicating broad scope among the researchers on this theme. The contributors to this volume think through the conundrum of national citizenship, in relation to their routes and roots from a variety of perspectives. The essays compiled in this monograph, thus, reveal that the subject areas comprising the study of the Indian diaspora are interdisciplinary in nature and constantly evolving. Please note: Taylor & Francis does not sell or distribute the Hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka.

Can Career, Technical and Vocational Education and Training (CTVET) serve as a tool for poverty alleviation and solve economic problems for nations? CTVET include a wide range of learning experiences which are relevant to the world of work and which may occur in a variety of learning contexts, including educational institutions and the workplace. These include learning designed to develop the skills for practicing particular occupations and careers, as well as learning designed to prepare for entry or re-entry into the world of work in general. *Guide to Computer Network Security* CRC Press

DNA Barcoding has been promoted since 2003 as a new, fast, digital genomics-based means of identifying natural species based on the idea that a small standard fragment of any organisms genome (a so-called micro-genome) can faithfully identify and help to classify every species on the planet. The fear that species are becoming extinct before they have ever been known fuels barcoders, and the speed, scope, economy and user-friendliness claimed for DNA barcoding, as part of the larger ferment around the genomics revolution, has also encouraged promises that it could inspire humanity to reverse its biodiversity-destructive habits. This book is based on six years of ethnographic research on changing practices in the identification and classification of natural species. Informed both by Science and Technology Studies (STS) and the anthropology of science, the authors analyse DNA barcoding in the context of a sense of crisis concerning global biodiversity loss, but also the felt inadequacy of taxonomic science to address such loss. The

authors chart the specific changes that this innovation is propelling in the collecting, organizing, analyzing, and archiving of biological specimens and biodiversity data. As they do so they highlight the many questions, ambiguities and contradictions that accompany the quest to create a genomics-based environmental technoscience dedicated to biodiversity protection. They ask what it might mean to recognise ambiguity, contradiction, and excess more publicly as a constitutive part of this and other genomic technosciences. Barcoding Nature will be of interest to students and scholars of sociology of science, science and technology studies, politics of the environment, genomics and post-genomics, philosophy and history of biology, and the anthropology of science.
