"This book explores the importance of global stocks to economic structures and explores the effects that these holdings have on the financial status of nations. It also provides a systems approach to investment projects in a globalized and open society"--Provided by publisher"-- <i>Secondhand Smoke Exposure and Cardiovascular Effects</i> National Academies Press	
<i>Critical Thinking in Clinical Research</i> explains the fundamentals of clinical research in a case-based approach. The core concept is to combine a clear and concise transfer of information and knowledge with an engagement of the reader to develop a mastery of learning and critical thinking skills. The book addresses the main concepts of clinical research, basics of biostatistics, advanced topics in applied biostatistics, and practical aspects of clinical research, with emphasis on clinical relevance across all medical specialties.

<i>Transportation and border security: hearing before the Committee on Commerce, Science, and Transportation, United States Senate, One Hundred Eighth Congress, first session, April 9, 2003.</i>	
Abortion Worldwide Springer	
This dictionary contains 10,000 Russian words in order of importance starting with the most common and finishing with words that occur about 8 times in a million. All the words have English translations, many have examples of usage and the entries include information on stress and grammatical irregularities. There is also a complete alphabetical index to the words in the list. A learner who knows all or most of these 10,000 words can be regarded as competent in Russian for all normal purposes. The list takes you from a beginner's core vocabulary through to postgraduate level.	
<i>Social Dimensions of Information and Communication Technology Policy</i> Routledge	
Replete with practical advice for anyone considering a career in federal, state, or local government, <i>Caught between the Dog and the Fireplug, or How to Survive Public Service</i> conveys what life is really like in a public service job. The book is written as a series of lively, entertaining letters of advice from a sympathetic uncle to a niece or nephew embarking on a government career. Kenneth Ashworth draws on more than forty years of public sector experience to provide advice on the daily challenges that future public servants can expect to face: working with politicians, bureaucracy, and the press; dealing with unpleasant and difficult people; leading supervisors as well as subordinates; and maintaining high ethical standards. Ashworth relates anecdotes from his jobs in Texas, California, and Washington, D.C., that illustrate with humor and wit fundamental concepts of public administration. Be prepared, says Ashworth, to encounter all sorts of unexpected situations, from the hostile to the bizarre, from the intimidating to the outrageous. He shows that in the confrontational world of public policymaking and program implementation, a successful career demands disciplined, informed thought, intellectual and personal growth, and broad reading. He demonstrates how, despite the inevitable inefficiencies of a democratic society, those working to shape policy in large organizations can nonetheless effect significant change-and even have fun along the way. The book will interest students and teachers of public administration, public affairs, policy development, leadership, or higher education administration. Ashworth's advice will also appeal to anyone who has ever been caught in a tight spot while working in government service.	
<i>Immunotherapy of Hepatocellular Carcinoma</i> McGraw-Hill Education	
The comparison between methods, evaluation of portal hypertension and many other questions are still open issues in liver elastography. New elastographic applications are under evaluation and close to being used in clinical practice. Strain imaging has been incorporated into many disciplines and EFSUMB guidelines are under preparation. More research is necessary for improved evidence for clinical applications in daily practice. The Special Issue published papers on recent advances in	

development and application of Ultrasound Elastography.

The Second Phase of My Life John Wiley & Sons

This IMA Volume in Mathematics and its Applications DIRECTIONS IN ROBUST STATISTICS AND DIAGNOSTICS is based on the proceedings of the first four weeks of the six week IMA 1989 summer program "Robustness, Diagnostics, Computing and Graphics in Statistics". An important objective of the organizers was to draw a broad set of statisticians working in robustness or diagnostics into collaboration on the challenging problems in these areas, particularly on the interface between them. We thank the organizers of the robustness and diagnostics program Noel Cressie, Thomas P. Hettmansperger, Peter J. Huber, R. Douglas Martin, and especially Werner Stahel and Sanford Weisberg who edited the proceedings. A vner Friedman Willard Miller, Jr. PREFACE Central themes of all statistics are estimation, prediction, and making decisions under uncertainty. A standard approach to these goals is through parametric mod elling. Parametric models can give a problem sufficient structure to allow standard, well understood paradigms to be applied to make the required inferences. If, how ever, the parametric model is not completely correct, then the standard inferential methods may not give reasonable answers. In the last quarter century, particularly with the advent of readily available computing, more attention has been paid to the problem of inference when the parametric model used is not correctly specified. *Ultrasound Elastography* Oxford University Press

Designed to suit a wide range of healthcare providers, including primary care, subspecialties, and allied health, Conn's Current Therapy has been a trusted clinical resource for more than 70 years. The 2020 edition continues this tradition of excellence with current, evidence-based treatment information presented in a concise yet in-depth format. More than 300 topics have been carefully reviewed and updated to bring you state-of-the-art information even in the most rapidly changing areas of medicine. Offers personal approaches from recognized leaders in the field, covering common complaints, acute diseases, and chronic illnesses along with the most current evidence-based clinical management options. Follows a consistent, easy-to-use format throughout, with diagnosis, therapy, drug protocols, and treatment pearls presented in quick-reference boxes and tables for point-of-care answers to common clinical questions. Includes new and significantly revised chapters on neurofibromatosis, autism, psoriatic arthritis, and postpartum depression. Features thorough updates in areas critical to primary care, including Acute Myocardial Infarction • Hypertension • Peripheral Arterial Disease • Valvular Heart Disease • Hepatitis C • Irritable Bowel Syndrome • Obsessive Compulsive Disorder • Chronic Obstructive Pulmonary Disease • Fibromyalgia • Menopause • Travel Medicine • and more. Provides current drug information thoroughly reviewed by PharmDs. Shares the knowledge and expertise of new contributors who provide a fresh perspective in their specialties. Features nearly 300 images, including algorithms, anatomical illustrations, and photographs, that provide useful information for diagnosis.

Science in the Early Years Humana

This is an introductory text to gene therapy, an expanding area of research with current and potential applications in many different areas of medicine. The book explains what gene therapy is, how genes are delivered and how they are targeted.

Caught Between the Dog and the Fireplug, or How to Survive Public Service Harper Collins

The Bealaí Ealaíonta series showcases the work of artists based at Gairdín Mhuire Day Centre in Corca Dhuibhne, Ireland. In four separate volumes it explores the creative practice of the artists in their own words, providing insight into the cultural influences and life experiences they have drawn upon in the creation of their work. Volume Three highlights the work of artist Anna O'Kelly.

Court Systems and Practices MDPI

"This report assesses progress over the past decade regarding the legality, safety and accessibility of abortion services worldwide. It summarizes developments in policy and documents recent trends in abortion incidence, with a focus on unsafe abortion. It also examines the relationship between unintended pregnancy, contraception and abortion, placing abortion within the broader

context of women's reproductive lives." - p. 4.

Choice Theory Springer

This manual and reference work provides a source of analytical data for drugs and related substances. It is aimed at scientists faced with the problem of identifying a drug in a pharmaceutical product, in a sample of tissue or body fluid, from a living patient or in post-mortem material.

Public Speaking 3.0 Springer

This book constitutes the proceedings of the 8th International Conference on Human Choice and Computers held in Pretoria, South Africa. The IFIP series publishes state-of-the-art results in the sciences and technologies of information and communication. The scope of the series includes: foundations of computer science; software theory and practice; education; computer applications in technology; communication systems; systems modeling and optimization; information systems; computers and society; computer systems technology; security and protection in information processing systems; artificial intelligence; and human-computer interaction. Proceedings and post-proceedings of refereed international conferences in computer science and interdisciplinary fields are featured. These results often precede journal publication and represent the most current research. The principal aim of the IFIP series is to encourage education and the dissemination and exchange of information about all aspects of computing.

Clarke's Analysis of Drugs and Poisons Springer Science & Business Media

This book provides a comprehensive and up-to-date overview of current polypectomy techniques and describes new perspectives in the field. A wide variety of topics are covered, including classification of colon polyps, established polypectomy techniques and related controversies, advanced endoscopic resection, endoscopic submucosal dissection, the use of submucosal injection solutions, management of complications, management of anticoagulant and antiplatelet medications, and post-polypectomy endoscopic surveillance. Information is also provided on a novel risk calculation score for adenoma recurrence after polypectomy, developed by the editors of the book and their colleagues. In acquainting readers with the state of the art in the field, Colon Polypectomy will serve as a valuable reference and practical tool for all who perform the procedure, which is of ever-increasing importance given the recent success of colon cancer screening campaigns in leading to earlier detection of colon polyps.

Education Code Bios Scientific Pub Limited

In this book we provide insights into liver - cancer and immunology. Experts in the field provide an overview over fundamental immunological questions in liver cancer and tumorimmunology, which form the base for immune based approaches in HCC, which gain increasing interest in the community due to first promising results obtained in early clinical trials. Hepatocellular carcinoma (HCC) is the third most common cause of cancer related death in the United States. Treatment options are limited. Viral hepatitis is one of the major risk factors for HCC, which represents a typical "inflammation-induced" cancer. Immune-based treatment approaches have revolutionized oncology in recent years. Various treatment strategies have received FDA approval including dendritic cell vaccination, for prostate cancer as well as immune checkpoint inhibition targeting the CTLA4 or the PD1/PDL1 axis in melanoma, lung, and kidney cancer. Additionally, cell based therapies (adoptive T cell therapy, CAR T cells and TCR transduced T cells) have demonstrated significant efficacy in patients with B cell malignancies and melanoma. Immune checkpoint inhibitors in particular have generated enormous excitement across the entire field of oncology, providing a significant benefit to a minority of patients.

Russian Learners' Dictionary Springer

This book presents current research in the study of pharmacology. Topics discussed include antidepressants therapy; monitoring antidepressant therapy by using heart rate variability; tianeptine and sertraline; gender differences in response to antidepressants; organotin polyethers as anticancer drugs; geldanamycin derivatives as promising anticancer drugs; design of novel anticancer drugs utilising busulfan for optimising pharmacological properties; advances in drug

discovery to assess cholinergic neurotransmission; models of intestinal drug permeability and pharmacopoeial quality of antimicrobial and antiviral formulations.

Protein-Protein Interaction Networks Academic Press

Advances in Stem Cells and Their Niches addresses stem cells during development, homeostasis, and disease/injury of the respective organs, presenting new developments in the field, including new data on disease and clinical applications. Video content illustrates such areas as protocols, transplantation techniques, and work with mice. Explores not only reviews of research, but also shares methods, protocols, and transplantation techniques. Contains video content to illustrate such areas as protocols, transplantation techniques, and work with mice. Each volume concentrates on one organ, making this a unique publication.

Conn's Current Therapy 2020, E-Book Elsevier Health Sciences

This collection examines the many internal and external factors affecting cognitive processes. Editor Shulamith Kreidler brings together a wide range of international contributors to produce an outstanding assessment of recent research in the field. These contributions go beyond the standard approach of examining the effects of motivation and emotion to consider the contextual factors that may influence cognition. These broad and varied factors include personality, genetics, mental health, biological evolution, culture, and social context. By contextualizing cognition, this

volume draws out the practical applications of theoretical cognitive research while bringing separate areas of scholarship into meaningful dialogue.

Directions in Robust Statistics and Diagnostics Cognella Academic Publishing

This interdisciplinary volume collates research work on kinesins and cancer. Authors attempt to validate members of the kinesin superfamily as potential targets for drug development in cancer chemotherapy. The work begins by highlighting the importance of kinesins, summarising current knowledge and how they are shown to be crucial for mitosis. Chapters go on to explore how this family of proteins are emerging as a novel target for chemotherapeutic intervention and drug development. Readers will learn how kinesins travel along microtubules to fulfill their many roles in intracellular transport or cell division. Several compounds that inhibit two mitotic kinesins (called Eg5 and CENP-E) have entered Phase I and II clinical trials and are explored in these chapters. Additional mitotic kinesins are currently being validated as drug targets, raising the possibility that the repertoire of kinesin-based drug targets may expand in the future. The book is suitable as a reference standard for the field of kinesins and cancer. It will interest those in academia and pharmaceutical companies, and anyone with an interest in the medical relevance of these proteins, which cutting edge methodologies are now enabling us to understand in astonishing

detail.

Transportation and Border Security Nova Biomedical Books

This volume explores techniques that study interactions between proteins in different species, and combines them with context-specific data, analysis of omics datasets, and assembles individual interactions into higher-order semantic units, i.e., protein complexes and functional modules. The chapters in this book cover computational methods that solve diverse tasks such as the prediction of functional protein-protein interactions; the alignment-based comparison of interaction networks by SANA; using the RaptorX-ComplexContact webserver to predict inter-protein residue-residue contacts; the docking of alternative conformations of proteins participating in binary interactions and the visually-guided selection of a docking model using COZOID; the detection of novel functional units by KeyPathwayMiner and how PathClass can use such de novo pathways to classify breast cancer subtypes. Written in the highly successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary hardware- and software, step-by-step, readily reproducible computational protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and comprehensive, *Protein-Protein Interaction Networks: Methods and Protocols* is a valuable resource for both novice and expert researchers who are interested in learning more about this evolving field.
