Although students have been moving between institutions and attempting to import course credit for many years, current data show that transfer is becoming an increasingly common approach to higher education. This volume is dedicated to exploring this new normal and has been written with a broad constituency in mind. It is intended to assist institutions, higher education agencies, and even state legislative bodies as they navigate the challenges of serving transfer students, a diverse, integral segment of our higher education system. Most available research has explored the two year to four-year transfer track, and the practical examples provided here often use that framework. However, real-world transition issues are not restricted to a specific higher education sector, and readers interested in the sometimes complex processes of other transfer pathways will gain valuable insight as well. This is the 162nd volume of the Jossey-Bass higher education report *New Directions for Higher Education*. Addressed to presidents, vice presidents, deans, and other higher education decision makers on all kinds of campuses, *New Directions for Higher Education* provides timely information and authoritative advice about major issues and administrative problems confronting every institution.

Decades of research have demonstrated that the parent-child dyad and the environment of the family—“which includes all primary caregivers”—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. *Parenting Matters* identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

"With job opportunities in decline for youth with no postsecondary degree, and college completion rates especially for students of color stagnating, a high school diploma is no longer enough. To solve this large-scale global problem. High school must be completely redesigned and reinvented providing all students real opportunity with both equity and excellence. P-TECH (Pathways in Technology Early College High School) has done just that by combining public high schools and community colleges in partnership with employers, providing both opportunity and support for all students, regardless of income, race or any screen for admission. Unlike many school models, this innovative and effective approach has spread across the US and around the world, eliminating barriers to replication by engaging all stakeholders. The first P-TECH, opened in a low-income Brooklyn neighborhood, across from a public housing project, and served 100% students of color. It has become the model for school reform across over a dozen US states and nearly twenty countries. Praised by President Obama, governors in red and blue states, and heads of nations, its story is told in this book through the personal stories of students who have destroyed the myths about which students can succeed. Their stories demonstrate that all students, if given the opportunity and support, can reach great heights in high school, college, and career"--

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.
