Meeting

Psychosocial Needs of Women with Breast Cancer Oxford University Press, USA
Experts from the Massachusetts General Hospital-widely respected as one of the world's premier psychiatric institutions-provide practical advice on the diagnosis and treatment of psychiatric issues experienced by in-hospital, medically ill adults and children. This compact resource reads like a handbook, but delivers all the details you'd expect from a textbook. Find information quickly thanks to an improved chapter organization,

and get just the answers you need with concise yet complete coverage appropriate for psychiatrists and generalists alike.

Quick Reference for Pediatric Oncology Clinicians Oxford University Press
Meaning-Centered-Psychotherapy in the Cancer Setting provides a theoretical context for Meaning-Centered Psychotherapy (MCP), a non-pharmalogic intervention which has been shown to enhance meaning and spiritual well-being, increase hope, improve quality of life, and significantly decrease depression, anxiety, desire for hastened death, and symptom burden distress in the cancer setting. Based on the work of Viktor Frankl and his concept

of logotherapy, MCP is an innovative intervention for clinicians practicing in fields of Psycho-oncology, Palliative Care, bereavement, and cancer survivorship. This volume supplements two treatment manuals, *Meaning-Centered Group Psychotherapy (MCGP) for Patients with Advanced Cancer* and *Individual Meaning - Centered Psychotherapy (IMCP) for Patients with Advanced Cancer* by Dr. Breitbart, which offer a step-wise outline to conducting a specific set of therapy sessions. In addition to providing a theoretical background on the MCP techniques provided in the treatment manuals, this volume contains

chapters on adapting MCP for different cancer-related populations and for different purposes and clinical problems including: interventions for cancer survivors, caregivers of cancer patients, adolescents and young adults with cancer, as a bereavement intervention, and cultural and linguistic applications in languages such as Mandarin, Spanish, and Hebrew. *Sexual Health, Fertility, and Relationships in Cancer Care* National Academies Press
Meaning-Centered Psychotherapy (MCP) for advanced cancer patients is a highly effective intervention for advanced cancer patients, developed and tested in randomized controlled

trials by Breitbart and colleagues at Memorial Sloan-Kettering Cancer Center. This treatment manual for group therapy provides clinicians in the oncology and palliative care settings a highly effective, brief, structured intervention shown to be effective in helping patients sustain meaning, hope and quality of life.

Reproductive Health and Cancer in Adolescents and Young Adults

Apos Clinical Reference Handbo Breast Cancer Survivorship Care. *Pediatric Psycho-oncology* Springer Like the groundbreaking first edition, *Pediatric Psycho-oncology, Second edition* puts the child at the centre of medical and

psychological care. It broadens the focus beyond treatment and cure to consider the quality of life of the child and their family. Written by an international group of pediatric oncologists and psychologists/psycho-oncologists brought together by an expert editorial team, it focuses on the real-life practical aspects of children undergoing treatment for cancer. This edition has been restructured and opens with a major section on Active treatment, which includes chapters addressing quality of life, pain, psychosocial aspects of treatment and interventions, art therapy and different fantasy-based techniques, palliative care, communication

and education, as well as a new chapter on psychopharmacology. Shorter sections then discuss survivorship and care of the dying child, including a new chapter on bereavement. The final section comprises new chapters on ethical considerations and on addressing the emotional needs of children whose parents have cancer, as well as a case study on international collaboration. An appendix provides a comprehensive overview of tools for evaluation and assessment in pediatric psychooncology. This book is a highly practical resource that will be invaluable for all health care professionals looking after children and adolescents with

cancer.
Breast Cancer Survivorship Care
Elsevier Health Sciences
Originally published by Oxford in 1998, Psycho-Oncology was the first comprehensive text in the field and remains the gold standard today. Edited by a team of leading experts in psycho-oncology, spearheaded by Dr. Jimmie C. Holland, the founder of the field, the text reflects the interdisciplinary nature and global reach of this growing field. Thoroughly updated and developed in collaboration with the American Psychosocial Society and the International Psycho-oncology Society, the third edition is a current,

comprehensive reference for psychiatrists, psychologists, oncologists, hospice workers, and social workers seeking to understand and manage the psychological issues involved in the care of persons with cancer and the psychological, social, and behavioral factors that contribute to cancer risk and survival. New to this edition are chapters on gender-based and geriatric issues and expanded coverage of underserved populations, community based programs, and caregiver training and education.

Pediatric Psychosocial Oncology: Textbook for Multidisciplinary Care
Demos Medical Publishing

Reproductive medicine is a growing field with new technology emerging faster than we can assess consumer's perceptions of –the number of cancer survivors are growing and there is a great need to attend to their quality of life-this book addresses the needs of males and females, identifies effective communication strategies and proactive measures for health care professionals and researchers to use as well as identifying gaps in the literature where more research is needed.

Manual of Cancer Treatment Recovery

Psychological Aspects of Cancer: A Guide to Emotional and Psychological Consequences of Cancer, Their Causes and Their Management opens with two essays on the biological basis of emotion/mental-driven body processes and disease. The consequence of such considerations is that since thoughts and emotions can be modulated and changed by health care professionals, psychological counseling should be seen not only as a way to help patients cope,

but possibly to influence the disease itself. A unique overview of a key area of cancer care, this important title then proceeds to offer a section on genetic predispositions to cancer and the psychological considerations involved in screening and pre-emptive therapies and decision-making in cancer therapy. A third section deals with the philosophical and religious underpinnings of psychological factors involved in coping with disease state stressors and the roles of hope in coping. The fourth section is an acknowledgement that patients with cancer live in a social context, which often includes a partner and/or caregiver. The fifth section includes

several essays on aspects and modalities of care-giving that are designed to help patients coping with their cancer and its aftermath, which increasingly extends for years. An important title covering key aspects of one of the most troubling disorders of our time, *Psychological Aspects of Cancer: A Guide to Emotional and Psychological Consequences of Cancer, Their Causes and Their Management* will provide the busy practitioner with cutting edge knowledge as well as practical information that can translate into better care for patients with cancer.

Publications

The first edition of the

Encyclopedia of Cancer and Society was published in 2007 and received a 2008 Editors' Choice Award from Booklist. It served as a general, non-technical resource focusing on cancer from the perspective of the social and behavioral sciences, exploring social and economic impacts, the "business" of cancer, advertising of drugs and treatment centers, how behavior change could offer great potential for cancer prevention, environmental risks, food additives and regulation, the relation between race and ethnicity and cancer risk, socioeconomic status, controversies—both scientific and political—in cancer treatment and

research, country-by-country entries on cancer around the world, and more. Given various developments in the field including new drug treatments, political controversies over use of the vaccines Gardasil and Cervarix with young girls to prevent cervical cancer, and unexpected upticks in the prevalence of adult smoking within the U.S. following decades of decline, the SAGE Encyclopedia of Cancer and Society, Second Edition serves as an updated and more current encyclopedia that addresses concerns pertaining to this topic. Key Features: · Approximately half of the 700 first-edition articles revised and updated · 30+ new entries covering new

developments since 2006 · Signed entries with cross-references · Further Readings accompanied by pedagogical elements · New Reader's Guide · Updated Chronology, Resource Guide, Glossary, and through new Index The SAGE Encyclopedia of Cancer and Society, Second Edition serves as a reliable and precise source for students and researchers with an interest in social and behavioral sciences and seeks to better understand the continuously evolving subject matter of cancer and society. [Quick Reference for Oncology Clinicians](#) Springer An invaluable reference for parents of sick or hospitalized children by an experienced

psychosocial counselor. To many parents, it is hard to imagine a more upsetting reality than one where their child is hospitalized, severely sick, or terminally ill. In *When Your Child is Sick*, psychosocial counselor Joanna Breyer distills decades of experience working with sick children and their families into a comprehensive guide for navigating the uncharted and frightening terrain. She provides expert advice to guide them through the hospital setting, at-home care, and long-term outcomes. Breyer's actionable techniques and direct advice will help parents feel more in-control of a circumstance that has upended their life. She alerts parents to key personnel in the

hospital, gives dialogue prompts to help parents ask for the help they need, addresses the needs of their other children at home, offers advice on how to best utilize friends and family who want to help, includes stories from other families who have been there, and teaches coping techniques to help both parents and children weather the stress of prolonged illness and even death. *When Your Child is Sick* is a valuable guide to managing the myriad practical and emotional complications of an impossible situation. *Encyclopedia of Cancer and Society* Springer Nature
Cancer care today often provides state-of-the-science biomedical treatment, but fails to address the

psychological and social (psychosocial) problems associated with the illness. This failure can compromise the effectiveness of health care and thereby adversely affect the health of cancer patients. Psychological and social problems created or exacerbated by cancer-including depression and other emotional problems; lack of information or skills needed to manage the illness; lack of transportation or other resources; and disruptions in work, school, and family life-cause additional suffering, weaken adherence to prescribed treatments, and threaten patients' return to health. Today, it is not possible to deliver high-quality cancer care without

using existing approaches, tools, and resources to address patients' psychosocial health needs. All patients with cancer and their families should expect and receive cancer care that ensures the provision of appropriate psychosocial health services. Cancer Care for the Whole Patient recommends actions that oncology providers, health policy makers, educators, health insurers, health planners, researchers and research sponsors, and consumer advocates should undertake to ensure that this standard is met.

Cancer Care for the Whole Patient Apos Clinical Reference Handbo
Childhood cancer is an

area of oncology that has seen both remarkable progress as well as substantial continuing challenges. While survival rates for some pediatric cancers present a story of success, for many types of pediatric cancers, little progress has been made. Many cancer treatments are known to cause not only significant acute side effects, but also lead to numerous long-term health risks and reduced quality of life. Even in cases where the cancer is considered curable, the consequences of treatment present substantial long-term health and psychosocial concerns for children, their families, their communities, and our health system. To examine specific

opportunities and suggestions for driving optimal care delivery supporting survival with high quality of life, the National Cancer Policy Forum of the Institute of Medicine and the American Cancer Society co-hosted a workshop which convened experts and members of the public on March 9 and 10, 2015. At this workshop, clinicians and researchers in pediatric oncology, palliative, and psychosocial care, along with representatives from the U.S. Food and Drug Administration, National Cancer Institute, Children's Oncology Group, pharmaceutical companies, and patient advocacy organizations, discussed and

developed a menu of options for action to improve research, quality of care, and outcomes for pediatric cancer patients and their families. In addition, parents of children with cancer and pediatric cancer survivors shared their experiences with care and provided poignant personal perspectives on specific quality of life concerns and support needs for children and families across the life spectrum. This report summarizes the presentations and discussion of the workshop.

This textbook walks clinicians through the psychosocial issues and challenges faced by children and

adolescents with cancer and their families. Through a developmental lens, the text provides guidance and resources that will enable clinicians to understand the physical and emotional impact of the disease from diagnosis onwards, to work with families in distress, and to diagnose and treat a range of behavioral, psychological, and psychiatric issues. The book also addresses the burgeoning fields of social media, complementary therapies, palliative care, and survivorship. Among the variety of useful resources supplied are assessment tools, websites, and additional reading materials. The psychosocial issues

that arise for children and their families during the course of treatment are an important yet often overlooked aspect of pediatric oncology care. The reader will find that *Pediatric Psychosocial Oncology: Textbook for Multidisciplinary Care* covers these issues at the forefront of clinical care in a direct and approachable way, integrating research literature with practical clinical guidance.

Behavioral Approaches to Chronic Disease in Adolescence

National Academies Press
This book explores the social conditions that promote pediatric resilience. It presents resilience as a set of complex interpersonal, institutional, and political relationships

that affect young patients' ability to "do well" in the face of medical adversity. Chapters analyze the impact of chronic or disabling conditions on children's development, while highlighting effective interventions that promote family well-being. This book integrates research from psychology, social work, medical anthropology, child life specialty, palliative care, public health, and nursing to examine a wide variety of family, cultural, and medical contexts. Practical strategies for supporting children and families are discussed, from meaningful assessment and interventions to social policy and advocacy. Featured topics

include: Psychosocial factors influencing children with immune-related health conditions. Resilience and pediatric cancer survivorship within a cultural context. Promoting resilience in chronically ill children and their families during the transition to adolescence. Creating a context for resilience in medical settings. Promoting resilience through children's health and social care policy. Child and Adolescent Resilience Within Medical Contexts is a must-have resource for researchers, clinicians and other professionals, as well as graduate students in child and school psychology, child and adolescent psychiatry, social work, pediatrics, medical anthropology,

nursing, educational psychology and policy. Oncology Springer Science & Business Media
The purpose of this book is to define and demonstrate how a multidisciplinary team can be organized, integrated, and utilized in the care of sarcoma patients. Real world experiences related by multiple sarcoma specialists working as members of a multidisciplinary team along with specific case examples highlighting sarcomas of bone and soft tissue in children and adults are presented in a framework geared toward practicing oncologists and surgeons in order to foster the creation and development of care teams for sarcoma patients. It is explained

how a truly multidisciplinary approach, with “one stop shopping,” offers better standardization and delivery of care, streamlines patient education, facilitates discussions and decision making, and provides comprehensive support throughout the treatment process. All aspects of treatment are covered, from first-line treatments for different tumor types through to salvage therapy and the development of novel investigational agents. This book will be of benefit to all members of the medical community who have a role to play in the care of these complex patients, including therapists, nurses, mid-level practitioners, primary care doctors,

and subspecialists. *Psychosocial Care of the Adult Cancer Patient* Springer Science & Business Media
 Winner of the Hugo Award for Best Novel • One of the most enthralling science fiction sagas ever written, Kim Stanley Robinson’s epic trilogy concludes with *Blue Mars*—a triumph of prodigious research and visionary storytelling. “A breakthrough even from [Kim Stanley Robinson’s] own consistently high levels of achievement.”—The New York Times Book Review The red planet is no more. Now green and verdant, Mars has been dramatically altered from a desolate world into one where humans can flourish. *The First Hundred*

settlers are being pulled into a fierce new struggle between the Reds, a group devoted to preserving Mars in its desert state, and the Green “terraformers.”

Meanwhile, Earth is in peril. A great flood threatens an already overcrowded and polluted planet. With Mars the last hope for the human race, the inhabitants of the red planet are heading toward a population explosion—or interplanetary war.

Top 100 Secrets and Key Points boxes provide a fast overview of the secrets you must know for success in practice and on exams. Bulleted lists, mnemonics, practical tips from global leaders in the field – all providing a concise overview of important board-relevant content. Portable size makes it easy to carry with you

for quick reference or review anywhere, anytime.

Meaning-centered Group Psychotherapy for Patients with Advanced Cancer John Wiley & Sons

This book provides the necessary information about not only the clinical aspects of caring for cancer survivors, but also the psychosocial impacts. There are multiple resources available to serve as oncology textbooks, but nothing to provide the necessary information on patient care for the non-MD members of the cancer patient management team. In the post-treatment phase, the management team must go beyond the realm of "conventional" follow-up, helping the patient to intellectually

understand and emotionally grasp the path ahead. Cancer Survivorship will prove a vital tool to physicians, nurses, clinical social workers and mental health professionals.

Geriatric Psycho-Oncology Oxford University Press "Psycho-oncology, 4th Edition is solemnly dedicated to Professor Jimmie C. Holland, M.D., internationally recognized as the founder of the field of Psycho-oncology. Dr. Holland, who was affectionately known

by her first name "Jimmie", had a profound global influence on the fields of Psycho-oncology, Oncology, Supportive Care, Psychiatry, Behavioral Medicine and Psychosomatic Medicine. At the time of her passing, Dr. Holland was the Attending Psychiatrist and Wayne E. Chapman Chair at Memorial Sloan-Kettering Cancer Center (MSK) and Professor of Psychiatry, Weill Medical College of Cornell University in New York"--
