In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to

provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

Bibliographie D'histoire de L'art Routledge

This book examines the role of the geotechnical baseline report (GBR) as a means of allocating and managing subsurface risks associated with subsurface construction.

Urban Transport XXI contains the proceedings of the 21st International Conference on Urban Transport and the Environment. The series of annual conferences organised by the Wessex Institute was first held in 1995. Transportation in urban areas, with its related environmental and social impacts, is a topic of significant concern for policymakers in both municipal and central government and for the urban citizens who need effective and efficient transport systems. Urban transport systems require considerable studies to devise and then safeguard their operational use, maintenance and safety. Transportation systems produce significant environmental impacts and can enhance or degrade the quality of life in urban centres. Clearly the challenge of providing effective and efficient transport systems in urban settings remains an acute concern, with financial, political and environmental constraints limiting the ability of transport system planners and operators to deliver the high quality outcomes expected by the public. Papers cover such topics as: Urban Transport Planning and Management; Urban Transport Strategies; Public Transport Systems; Environmental Aspects; Economic and Social Impact; Safety and Security; Travel Behaviour Studies; Customer Satisfaction; Transportation Modelling and Simulation; Infrastructure Development; Intelligent and Advanced Transport Systems; Transportation Integration; City Logistics; Resilience and Inter-modal Transport Systems; Mass Transport Strategies; Social Impacts; Freight Transport; Railway Systems; Transport Governance and Administration; Port and City; Mobility and Public Space; Life Cycle Management.

Reproduction of the original: The History of Johnny Quae Genus by William Combe

Sketches of Western Life

A 17th century adventure tale of swan-powered lunar exploration. Written in 1638, *The Man in the Moone* was one of the earliest science fiction books and an important influence on the development of the genre. In it the narrator Domingo Gonsales reaches the moon by accident when the trained swans pulling his flying machine proceed on their annual lunar migration. Highly imaginative and entertaining throughout.
