Abstract: In 2003, after over 20 years of minimal health insurance coverage in rural areas, China launched a heavily subsidized voluntary health insurance program for rural residents. The authors use program and household survey data, as well as health facility census data, to analyze factors affecting enrollment into the program and to estimate its impact on households and health facilities. They obtain estimates by combining differences-in-differences with matching

methods. The authors find some evidence of lower enrollment rates among poor households, holding other factors constant, and higher enrollment rates among households with chronically sick members. The household and facility data point to the scheme significantly increasing both outpatient and inpatient utilization (by 20-30 percent), but they find no impact on utilization in the poorest decile. For the sample as a whole, the authors find no statistically significant effects on average out-of-pocket spending, but they do find some-albeit weak-evidence of increased catastrophic health spending. For the poorest decile, by contrast, they find that the scheme increased average out-of-pocket spending

but reduced the incidence of catastrophic health spending. They find evidence that the program has increased ownership of expensive equipment among central township health centers but had no impact on cost per case.

*E-Governance in India* World Health Organization

E-Governance has been one of the strategic sectors of reform in India since late 1990s under the rubric of 'good governance' agenda promoted by International Organizations. As India's policy focus changed towards economic liberalization, deregulation and privatization proliferating domestic and foreign investment, ICT (Information Communication Technology) has been one

of the leading areas for such heightened investment. Consequently, there has been a burgeoning interest in deploying ICT, in revamping the public service delivery and eventually the overall system of governance. This book analyses e-Governance in India and argues that such initiatives did not take place in isolation but followed in the footsteps of broader governance reform agenda that has already made considerable impact on the discourses and practices of governance in India. Employing interdisciplinary methodology by combining approaches from the Political Sciences, Sociology and Postcolonial/ transcultural studies, this book presents a qualitative account of the policies and practices of e-Governance reform in India along with a detailed case study of the Common Services Centres (CSCs) Scheme under the National e-Governance Plan of the Government of India and its resultant impact on the overall system of governance. It unfolds general theoretical issues in terms of the relationship between technology and governance and the entanglement of politics, technology and culture in the complex whole of governance. This

further our understanding of the impact of the transnational governance reform agenda on post-colonial and post-communist societies of the developing world. Making an important and original contribution to the emerging field of e-Governance and to the existing body of research on governance in general, this book will be of interest to students and scholars of Political Science, Political Sociology, South Asian Politics and Governance.

**India Emerging** World Bank Publications The book assesses the policy actions of select Asian governments (China, India, Hong Kong, South Korea, Singapore and Thailand) to address critical health system functions from a policy design perspective. The findings show that all governments in the region have made tremendous strides in focussing their attention on the core issues and, especially, the interactions among them. However, there is still insufficient appreciation of the usefulness of public hospitals and their efficient management. Similarly, some governments have not made sufficient efforts to establish an effective regulatory framework which is especially vital in systems with a large share of private providers and payers. A well-run public hospital system and an effective

framework for regulating private providers are essential tools to support the governance, financing, and payment reforms underway in the six health systems studied in this book.

*Dairy Cooperatives* John Wiley & Sons This book describes the present awful state of India’s Public Health Care Delivery, its dismal planning and implementation. It argues that it can be remedied comprehensively and effectively, using its ‘own already present’ resources. A radical re-evaluation of some sacrosanct ideas and discarding many of these, especially in Primary Care and its structure is required. It can be done without disadvantage to the last man served. This book starts with the sea change India has undergone and emphasizes new ways of managing health. High quality work force creation and its deployment, an unsolved problem is effectively given a solution. The bulk of the book discusses the entire public health care structure and function and how it can be newly laid out with proper work force allocation, hitherto grossly inadequate, including professionals from other training backgrounds. It is total solution that will

help India to achieve the goal of Universal Health Care.

This book provides a comprehensive overview of universal health coverage in India. It starts by setting the historical context and politics of the debates around universal health coverage (UHC) in India and proceeds to analyze the present crisis of public health in the country. The book examines the present policies on the pharmaceutical industry, missing links in universalizing health, and the importance of social determinants of health. It is divided into five sections, and some of the topics covered include the difference between comprehensive primary health care and universal health care, public health and medical care, health service, and health system. The chapters are contributed by scholars and practitioners based on historical, interdisciplinary, empirical, and policy research. The book is insightful to academics, public health administrators, policymakers, practitioners, and students interested in health care and organization, looking to transform theory into policy and practice.

**Governometrics and Technological Innovation for Public Policy Design and Precision** Chandresh Agrawal

This book showcases over 60 cutting-edge research papers from the 5th International Conference on Research into Design – the largest in India in this area – written by eminent researchers from across the world on design process, technologies, methods and tools, and their impact on innovation, for supporting design across boundaries. The special features of the book are the variety of insights into the product and system innovation process, and the host of methods and tools from all major areas of design research for the enhancement of the innovation process. The main benefit of the book for researchers in various areas of design and innovation are access to the latest quality research in this area, with the largest collection of research from India. For practitioners and educators, it is exposure to an empirically validated suite of theories, models, methods and tools that can be taught and practiced for design-led innovation.

Social epidemiology is the study of how social interactions—social norms, laws, institutions, conventia, social conditions and behavior—affect the health of populations. This practical, comprehensive

introduction to methods in social epidemiology is written by experts in the field. It is perfectly timed for the growth in interest among those in public health, community health, preventive medicine, sociology, political science, social work, and other areas of social research. Topics covered are: Introduction: Advancing Methods in Social Epidemiology The History of Methods of Social Epidemiology to 1965 Indicators of Socioeconomic Position Measuring and Analyzing 'Race' Racism and Racial Discrimination Measuring Poverty Measuring Health Inequalities A Conceptual Framework for Measuring Segregation and its Association with Population Outcomes Measures of Residential Community Contexts Using Census Data to Approximate Neighborhood Effects Community-based Participatory Research: Rationale and Relevance for Social Epidemiology Network Methods in Social Epidemiology Identifying Social Interactions: A Review, Multilevel Studies Experimental Social Epidemiology: Controlled Community Trials Propensity Score Matching Methods for Social Epidemiology Natural Experiments and Instrumental Variable

Analyses in Social Epidemiology and Using Causal Diagrams to Understand Common Problems in Social Epidemiology.

"Publication of this highly informative textbook clearly reflects the coming of age of many social epidemiology methods, the importance of which rests on their potential contribution to significantly improving the effectiveness of the population-based approach to prevention. This book should be of great interest not only to more advanced epidemiology students but also to epidemiologists in general, particularly those concerned with health policy and the translation of epidemiologic findings into public health practice. The cause of achieving a 'more complete' epidemiology envisaged by the editors has been significantly advanced by this excellent textbook." —Moyses Szklo, professor of epidemiology and editor-in-chief, American Journal of Epidemiology, Johns Hopkins University "Social epidemiology is a comparatively new field of inquiry that seeks to describe and explain the social and geographic distribution of health and of the determinants of health. This book considers the major methodological

challenges facing this important field. Its chapters, written by experts in a variety of disciplines, are most often authoritative, typically provocative, and often debatable, but always worth reading." —Stephen W. Raudenbush, Lewis-Sebring Distinguished Service Professor, Department of Sociology, University of Chicago "The roadmap for a new generation of social epidemiologists. The publication of this treatise is a significant event in the history of the discipline." —Ichiro Kawachi, professor of social epidemiology, Department of Society, Human Development, and Health, Harvard University "Methods in Social Epidemiology not only illuminates the difficult questions that future generations of social epidemiologists must ask, it also identifies the paths they must boldly travel in the pursuit of answers, if this exciting interdisciplinary science is to realize its full potential. This beautifully edited volume appears at just the right moment to exert a profound influence on the field." —Sherman A. James, Susan B. Studies, Duke University  
*Annual Report* Routledge

This book presents a detailed portrait of the contours of South-South collaboration in the health biotechnology sector. In particular, it casts revealing light on the factors that guide effective scientific partnerships and exchanges. The key findings indicate that the level of South-South collaboration among researchers in health biotechnology remains low but is slowly increasing and that entrepreneurial collaboration seems to be more prevalent. Collaboration has helped to extend capacity in health biotechnology research, manufacturing, and innovation to an increasing number of developing countries.

Snakebites are well-known medical

emergencies in many parts of the world especially in rural areas. Agricultural workers and children are most affected. The incidence of snakebite mortality is particularly high in South-East Asia. Rational use of snake anti-venom can substantially reduce mortality and morbidity due to snake bites. These guidelines are a revised and updated version of those published in 2011. The geographical coverage extends from India in the west to DPR Korea and Indonesia in the east Nepal and Bhutan in the north and to Sri Lanka and Indonesia in the south and south-east. Snakes inhabiting the Indonesian islands east of Wallace's line (West Papua and Maluku Islands) are part of the Australasian elapid fauna differing from those west of this line. This publication aims to pass on a digest of available knowledge about all clinical aspects of snake-bite to medically trained personnel including medical doctors nurses dispensers and community health workers. They aim to provide sufficient practical information to allow medically trained personnel to assess and treat patients with snake-bites at different levels of the health service.
