Realidades 1 Savvas Learning Company The most significant domestic issue of the 2004 elections is unemployment. The United States has lost nearly three million jobs in the last ten years, and real employment hovers around 9.1 percent. Only one political analyst foresaw the dark side of the technological revolution and understood its implications for global employment: Jeremy Rifkin. *The End of Work* is Jeremy Rifkin's most influential and important book. Now nearly ten years old,

it has been updated for a new, post-New Economy era. Statistics and figures have been revised to take new trends into account. Rifkin offers a tough, compelling critique of the flaws in the techniques the government uses to compile employment statistics. *The End of Work* is the book our candidates and our country need to understand the employment challenges- and the hopes-facing us in the century ahead.

Policymakers in Latin America increasingly are turning to policies that have high economic rates of return and a favorable impact on income distribution. By providing financial services to small businesses and poor households -which normally lack such services- credit unions help secure growth with equity. The challenges faced by Latin America's credit unions today are likely to force them to further modernize and consolidate, fine tune their inherent advantages, improve mechanisms for prudential regulation, and find ways to increase their share of low and middle-income markets. *Safe Money* presents the new thinking on how credit unions can compete effectively in modern financial markets while still retaining their social mission.

This document's purpose is to spell out the Church's understanding of the nature of revelation--the process whereby God

communicates with human beings. It touches upon questions about Scripture, tradition, and the teaching authority of the Church. The major concern of the document is to proclaim a Catholic understanding of the Bible as the "word of God." Key elements include: Trinitarian structure, roles of apostles and bishops, and biblical reading in a historical context.

El material contenido en este libro, pretende contribuir a la construcción social de una cultura digital educativa. En efecto, profesores, investigadores, estudiantes, directivos, tomadores de decisiones y estudiosos de la educación a través de sus aportaciones, tratan de allanar el camino, para elucidar la forma en que se construye socialmente una cultura digital educativa. Esto es, aquilatan la importancia de la construcción colectiva y el valor que tiene la tecnología digital, integrada de manera inteligente y racional a la educación. Entendemos por cultura digital educativa, al acopio de conocimientos e ideas que se generan y despliegan en el ejercicio de las habilidades intelectuales en el ámbito educativo, mediante el uso de las tecnologías de la información y la comunicación. La gran mayoría de los trabajos expuestos en este libro, se refieren al ejercicio de imaginación y libertad para la generación de escenarios pedagógicos que orquestan y privilegian la utilización de modalidades educativas

permeadas por las tecnologías en boga. Esto quiere decir, que se ofrecen soluciones innovadoras y procedimientos eficaces desde el punto de vista cognitivo, para impulsar y potenciar los procesos tecnopedagógicos y volver atractivo, lúdico y transformador el acto educativo, trascendiendo la infraestructura, contenidos, modelos de uso, la gestión, las políticas y la evaluación. Para volver ágil y flexible la lectura de este libro, los trabajos se despliegan en dos partes. En la primera parte se incluye todo lo relativo a los modelos de uso. Estos modelos de uso circunscriben evidentemente, la parte correspondiente a la formación docente y al diseño, concepción y puesta en marcha de contenidos digitales, así como a la infraestructura utilizada. La segunda parte, está dedicada a los trabajos que hacen referencia a la gestión. Incluimos en la gestión, todos los aportes relacionados con la gestión del conocimiento, la gestión académico-administrativa, así como las políticas referentes a la inclusión de TIC en los distintos niveles y modelos educativos y evidentemente, a la evaluación educativa en su más amplia acepción. Con relación a la primera parte, se ponen a disposición, modelos de uso para la educación regular y en línea, alfabetización digital, lenguas, tecnologías móviles, ingeniería y de algunas disciplinas tales como la química, la biología y una vasta proporción de ellos, relativos a las matemáticas. Integrar tecnologías de punta para la concepción, diseño y puesta en marcha de contenidos digitales, es un reto que cubren algunos de los materiales en la primera parte que conforma este libro. Estas contribuciones se enfocan principalmente en la generación y desarrollo de objetos de aprendizaje, repositorios, formatos, metodologías, normas, estándares, celdas y herramientas para su producción y distribución. Este libro, significa por sí mismo, la producción de contenidos digitales listos para ser utilizados, distribuidos y mejorados en función de su conocimiento. Las múltiples formas de relación y correlación entre individuos, independientemente de sus posiciones geográficas para la comunicación y el trabajo educativo, también son abordadas en este espacio. Se muestran experiencias, trayectorias y múltiples efectos educativos que determinan comunidades educativas de aprendizaje que aprenden y colaboran en comunidad. La importancia y relevancia de la formación docente se manifiesta también en la primera parte. Se exploran los temas relativos a cómo los docentes se apropian de la cultura digital; cómo apoyan la

enseñanza combinada; cómo se gestionan los procesos de formación tecnopedagógica, y sobre todo, cómo mejorar el aprendizaje y la adquisición de competencias antes, durante y después de su formación docente. Ciertos trabajos de este libro significan experiencias de organización y gestión educativas. Éstas, están implicadas en un sentido de evolución y creación de retos tanto personales como institucionales. Se generan trayectorias para proyectos e iniciativas que coproduzcan conocimiento a través de gestiones colaborativas y asociadas. La creación y/o uso de entornos educativos regulares y virtuales, supone la formación de recursos humanos que conforman el capital intelectual y las políticas públicas, producidas por las instituciones educativas para beneficio de la sociedad. En este capital intelectual se incluyen profesionistas, dirigentes, autores, desarrolladores y autoridades educativas. Los trabajos muestran la participación del público educativo en las políticas públicas. Es de vital importancia, puesto que de ahí surgen las acciones para alcanzar los objetivos educativos. Las políticas públicas deben considerar todas las dimensiones que atañen los procesos de enseñanza aprendizaje. También se vuelve importante el contraste de las políticas públicas con las acciones y tratados internacionales. También se da cuenta de este fenómeno de producción de capital intelectual y políticas públicas. El material desarrollado en la parte 2 de este libro, nos alecciona sobre cómo poder gestionar, usar, experimentar, investigar y explorar con programas en general y de fuente abierta, asegurando la sustentabilidad, independencia y masificación de muchas tecnologías educativas. De hecho, existe un gran movimiento de acceso y uso de recursos de fuente abierta. No obstante, para expandirla y generalizarla se necesita de una participación activa y decidida en el uso y generación de nuevos recursos. También, en este libro, específicamente en la segunda parte, se muestran algunos trabajos que aluden a la gestión del conocimiento. Operar conectado a diferentes redes de acceso y cambiar de punto de conexión, sin detener o reiniciar las conexiones de red activas es una tarea común de la portabilidad y movilidad. Los dispositivos que tienen capacidad para realizar esas operaciones son portables y móviles. Algunos trabajos, dan cuenta de este fenómeno tecnológico aplicado al área educativa. Ciertos autores entienden la educación como un sistema orgánico en red, en donde no existe un único centro, sino que este sistema está formado por

distintos nodos que se relacionan de formas múltiples al perseguir objetivos, compartir entornos y sobre todo, compartir recursos de toda índole. A estos trabajos se le llaman proyectos ecosistémicos. Cuando diversos autores nos plantean que las habilidades prioritarias en la Sociedad del Aprendizaje son las cognitivas, nos muestran sus posturas sobre la correlación cognición versus tecnología y sobre todo, el pensamiento crítico y la conceptualización del pensamiento heurístico. Estas posturas las encontraremos en este libro. Es gracias a las innovaciones tecnológicas que se producen cada vez más las convergencias tecnológicas de medios. Ello, porque surgen nuevas combinaciones y formas de integración en el campo educativo. Este material muestra tanto la convergencia tecnológica de medios como la convergencia de inteligencias para la tecnología educativa. Por otro lado, la evaluación es un proceso social continuo que se puede volver más integral y representativo de los avances cognitivos, si se incluyen de manera adecuada las tecnologías a lo largo del proceso de enseñanza-aprendizaje. Dada la importancia, de la actividad de evaluación, se presentan varias experiencias en este libro. También, aquí se dan cita trabajos relativos a las múltiples perspectivas, miradas nuevas y enfoques novedosos con los que se relacionan todas las dimensiones que convergen en la evaluación de los procesos de enseñanza-aprendizaje utilizando tecnologías de la información y la comunicación. Así pues, valga este cúmulo de prácticas para apoyar los procesos de enseñanza-aprendizaje en todos los sistemas y niveles educativos de todos los actores intervinientes para entre todos, coconstruir socialmente una cultura digital educativa que nos caracterice como sociedad educativa innovadora y emprendedora. ¡Que disfruten su lectura!

Recent attempts to challenge the primacy of reason--and its realization in foundationalist accounts of knowledge and cognitive formulations of human action--have focused on processes of discourse. Drawing from social and literary accounts of discourse, Kenneth Gergen considers these challenges to empiricism under the banner of "social construction." His aim is to outline the major elements of a social constructionist perspective, to illustrate its potential, and to initiate debate on the future of constructionist pursuits in the human sciences generally and psychology in particular.

The definite account of psychologist Jean Piaget's work Jean Piaget's influence on psychology has been profound. His pathbreaking investigations and theories of cognitive development have set child psychology moving in entirely new directions. His bold speculations have provided the inspiration for the work of others. His studies have been the subject of many books and countless articles. And, significantly, his influence has spread to other disciplines and is having an ever-growing impact on the general culture at large. Here Jean Piaget, with the assistance of his long-time collaborator Bÿel Inhelder, offers a definitive presentation of the developmental psychology he has elaborated over the last forty years. This comprehensive synthesis traces each stage of the child's cognitive development, over the entire period of childhood, from infancy to adolescence.
