GAO Documents John

Wiley & Sons  
The quest for policy  
integration crystallized  
in the 1990s as  
awareness was  
growing that the

current supply of narrow, sectoral, and little coordinated, or even overlapping and conflicting, policies could not cope efficiently and effectively with contemporary complex, cross-cutting and interdependent socio-environmental problems. Combining and coordinating policies properly promises to address this institutional misfit, "add value" to policies, support planning at national and sub-national levels, and facilitate the transition to sustainable development more generally. This book proposes a comprehensive conceptualization of policy integration and negotiates pertinent theoretical, methodological and

applied issues from the perspective of selected EU policies - rural development, regional development, transport, social, economic, environmental, water resources, and biodiversity policy. Mediterranean desertification, an exceptionally complex socio-environmental problem, is used as an illustrative example as the idea for this book transpired while researching the topic of policy making to combat desertification in the context of MEDACTION, an EU-funded research project. *Guide to Sustainable Development and Environmental Policy* Edward Elgar Publishing  
The research paper "Extinction Risk from

Climate Change" published in the journal Nature in January 2004 created front-page headlines around the world. The notion that climate change could drive more than a million species to extinction captured both the popular imagination and the attention of policy-makers, and provoked an unprecedented round of scientific critique. Saving a Million Species reconsiders the central question of that paper: How many species may perish as a result of climate change and associated threats? Leaders from a range of disciplines synthesize the literature, refine the original estimates, and elaborate the conservation and policy implications. The

book: examines the initial extinction risk estimates of the original paper, subsequent critiques, and the media and policy impact of this unique study presents evidence of extinctions from climate change from different time frames in the past explores extinctions documented in the contemporary recordsets forth new risk estimates for future climate change considers the conservation and policy implications of the estimates. Saving a Million Species offers a clear explanation of the science behind the headline-grabbing estimates for conservationists, researchers, teachers, students, and policy-makers. It is a critical

resource for helping those working to conserve biodiversity take on the rapidly advancing and evolving global stressor of climate change—the most important issue in conservation biology today, and the one for which we are least prepared.

**Conserving Biodiversity** Indiana University Press  
 Arising from a conference held at the University of Sydney in 1993, this collection of 35 papers addresses topics such as habitat loss, degradation and pollution of water resources, weeds and feral animals, and commercial use of native biota. Also discusses the role of government and non-government agencies in conservation.

Includes 25 colour plates, references and an index. The editors work in the Environmental Survey and Research Division of the NSW National Parks and Wildlife Service.

**Policy Integration for Complex Environmental Problems**

CreateSpace  
 The Guide to Sustainable Development and Environmental Policy is a comprehensive presentation of definitions, philosophies, policies, models, and analyses of global environmental and developmental issues. With a wealth of comparative, multidisciplinary, and geographically varied perspectives on environmental

governance, it also provides detailed and balanced discussions about specific environmental issues. The guide combines formal, objective entries with critical commentaries that emphasize different opinions and controversies. With succinct explanations of more than a thousand terms, thoughtful interpretations by international experts, and helpful cross-referencing, this resource is designed to serve as a roadmap for understanding the issues and debates in the overlapping fields of environment and development. Intended for use by activists, journalists, policymakers, students, scholars, and interested citizens, the

Guide to Sustainable Development and Environmental Policy will be a helpful tool for anyone trying to get a comprehensive look at the many environmental organizations, schools of thought, development programs, international environmental treaties, conventions, and strategies that have proliferated in the past few decades.

Securing Urban Heritage GEF Evaluation Office

A study of the demands of economic development and ecological conservation on the African island country. Protecting the unique plants and animals that live on Madagascar while fueling economic growth has been a priority for the

Malagasy state, international donors, and conservation NGOs since the late 1980s. *Forest and Labor in Madagascar* shows how poor rural workers who must make a living from the forest balance their needs with the desire of the state to earn foreign revenue from ecotourism and forest-based enterprises. Genese Marie Sodikoff examines how the appreciation and protection of Madagascar's biodiversity depend on manual labor. She exposes the moral dilemmas workers face as both conservation representatives and peasant farmers by pointing to the hidden costs of ecological conservation. "Sodikoff takes us deep into the underbelly of

conservation in one of the world's biodiversity "hot-spots." It is a world of timber barons, logging gangs, corrupt state functionaries, international conservation experts, worker-peasants, and poachers. She paints eastern Madagascar as a frontier of dispossession, exploitation, and violence. The plundering of the Mananara protected area is seen, in a brilliantly original way, from the subaltern vantage point of forest workers and conservation labor. *Forest and Labor* places present day conservation on the larger canvas of a century of forest-based social relations of labor that have entered into the making of what Sodikoff calls neoliberal

conservation. It is a magnificently rich historical and ethnographic accounting of what passes as the making of global biosphere reserves. A tour de force.” —Michael Watts, UC Berkeley “An important and lively contribution to the study of “green neoliberalism.” An obvious choice for undergraduate teaching on ecology, rights, international political economy, development, and a host of other topics.” —David Graeber, University of London “Brings a whole new angle and nuance to the crucial debates over conservation and development. Applicable not just to lush, humid eastern Madagascar, but all around the globe.”

—Christian Kull, Monash University “Those interested in conservation, tropical rainforest ecology, international political economy, and sustainable development will find *Forest and Labor in Madagascar* an insightful case study.” —Choice *ERDA Energy Research Abstracts* Island Press *Securing Urban Heritage* considers the impact of securitization on access to urban heritage sites. Demonstrating that symbolic spaces such as these have increasingly become the location of choice for the practice and performance of contemporary politics in the last decade, the book shows how this has led to the securitization of urban

public space. Highlighting specific changes that have been made, such as the installation of closed-circuit television or the limitation of access to certain streets, plazas and buildings, the book analyses the impact of different approaches to securitization. Claiming that access to heritage sites is a precursor to an informed and thorough understanding of heritage, the editors and contributors to this volume argue that new forms of securing urban heritage, including community involvement and digitalization, offer possibilities for the protection and use of urban heritage. Looking more closely at the versatile relationship between

access and securitization in this context, the book provides a theoretical framework for the relationship between urban heritage and securitization. Comparing case studies from cities in Angola, Bulgaria, Eritrea, France, Germany, Hungary, Italy, Japan, Latvia, Mexico, Norway, Russia, Suriname, Sweden, Turkey, UK, and the US, the book reveals some of the key mechanisms that are used to regulate access to heritage sites around the world. Providing much-needed insight into the diverse challenges of securitization for access and urban heritage, *Securing Urban Heritage* should be essential reading for academics, students,

and practitioners from the fields of heritage and urban studies, architecture, art history, conservation, urban planning, and urban geography.

The PARIS 4

conference, which took place at the National Museum of Denmark in 2011, attracted over 100 participants from 18 countries.

Delegates presented and discussed the latest developments in the field of Preserving Archaeological Remains In Situ. These proceedings explore four major themes: rates of degradation in archaeological remains and the limits of acceptable change; the techniques and duration of monitoring on archaeological sites; the role of multinational

standards when the sites and national legislations are so variable; reviewing the effectiveness of in situ preservation, after nearly two decades of research. A special issue of *Conservation and Management of Archaeological Sites* (Vol 14 Nos 1-4). *Principles in Practice* John Wiley & Sons

In *Climate Change Law in China in Global Context*, seven climate change law scholars explain how the country's legal system is gradually being mobilized to support the reduction of greenhouse gas emissions in China and achieve adaptation to climate change. There has been little English scholarship on the legal regime for climate change in China. This volume

addresses this gap in the literature and focuses on recent attempts by the country to build defences against the impacts of climate change and to meet the country's international obligations on mitigation. The authors are not only interested in China's laws on paper; rather, the book explains how these laws are implemented and integrated in practice and sheds light on China's current laws, laws in preparation, the changing standing of law relative to policy, and the further reforms that will be necessary in response to the 2015 Paris Agreement on Climate Change. This comprehensive and critical account of the Chinese legal

system's response to the pressures of climate change will be an important resource for scholars of international law, environmental law, and Chinese law.

**Restoring Nature's Capital** Routledge

A major advancement in understanding the factors underlying wildlife-habitat relationships, Foundations for Advancing Animal Ecology will be an invaluable resource to professionals and practitioners in natural resource management in public and private sectors, including state and federal agencies, non-governmental organizations, and environmental consultants.

Representing the definitive reference work for this broad and dynamic field, The International Encyclopedia of Geography arises from an unprecedented collaboration between Wiley and the American Association of Geographers (AAG) to review and define the concepts, research, and techniques in geography and interrelated fields. Available as a robust online resource and as a 15-volume full-color print set, the Encyclopedia assembles a truly global group of scholars for a comprehensive, authoritative overview of geography around the world. Contains more than 1,000

entries ranging from 1,000 to 10,000 words offering accessible introductions to basic concepts, sophisticated explanations of complex topics, and information on geographical societies around the world Assembles a truly global group of more than 900 scholars hailing from over 40 countries, for a comprehensive, authoritative overview of geography around the world Provides definitive coverage of the field, encompassing human geography, physical geography, geographic information science and systems, earth studies, and environmental science Brings together interdisciplinary perspectives on geographical topics

and techniques of interest across the social sciences, humanities, science, and medicine Features full color throughout the print version and more than 1,000 illustrations and photographs Annual updates to online edition  
*Climate Change Law in China in Global Context*  
 University of Minnesota Press  
 This book brings together scientists and practitioners from five continents to present their experience in undertaking activities that contribute to our understanding and informed management of mountain areas. In particular, they address the challenges of working in interdisciplinary teams and of effectively involving stakeholders.

The result is a powerful book that integrates research from different disciplines in the natural and social sciences, and in some cases indigenous knowledge, to address the question of how knowledge is gained about mountain areas and how can it be integrated and used in effective management. A comprehensive introduction covers the challenges in mountain area research and management, and the need for integrated approaches. This is followed by chapters that look at key areas of mountain research and management over the past 25 years, covering inter-and trans-disciplinary research, subsistence cultures and sustainable development,

innovations in watershed management and biodiversity conservation. Subsequent chapters cover key areas of research and management on five continents with a focus on comparison of common challenges and solutions across regions. The concluding chapter brings these experiences together. Published with Parks Canada  
European Union Environment Policy and New Forms of Governance: A Study of the Implementation of the Environmental Impact Assessment Directive and the Eco-management and Audit Scheme Regulation in Three Member States  
Johns Hopkins University Press

This insightful Research Agenda examines the multidimensional relationships between heritage planning and pressing current societal challenges around climate, identity and development. Mapping future avenues for the field, it suggests new approaches to executing, studying and reflecting on heritage planning.

This publication outlines an action agenda for governments, business, and civil society to restore and sustain ecosystem services: the benefits people receive from nature such as fresh water, food, protection from floods, and spiritual enrichment. The action agenda responds to the Millennium Ecosystem Assessment finding that globally nearly two thirds of ecosystem services assessed were degraded. The agenda is informed by the recommendations of 17 policy experts from

around the globe.

Routledge

This title was first published in 2001.

Outlining the results of a three-country study, this text examines the impact of EU policy on the domestic, political and institutional environment. It tests ideas about new forms of governance that reflect the values of participation and empowerment of local interests, particularly through a close scrutiny of the environmental impact process. The book also analyzes the responses of the business sector in three countries - Germany, Greece and Great Britain - to the introduction of a voluntary environmental management system,

the eco-management and audit scheme.

#### Pandas and People

Springer Nature

The book investigates the theme of Modernism (1920-1960 and its epigones) as an integral part of tangible and intangible cultural heritage which contains the result of a whole range of disciplines whose aim is to identify, document and preserve the memory of the past and the value of the future. Including several chapters, it contains research results relating to cultural heritage, more specifically Modernism, and current digital technologies. This makes it possible to record and evaluate the changes that both undergo: the first one, from a material point

of view, the second one from the research point of view, which integrates the traditional approach with an innovative one. The purpose of the publication is to show the most recent studies on the modernist lexicon 100 years after its birth, moving through different fields of cultural heritage: from different forms of art to architecture, from design to engineering, from literature to history, representation and restoration. The book appeals to scholars and professionals who are involved in the process of understanding, reading and comprehension the transformation that the places have undergone within the period under examination. It will

certainly foster the international exchange of knowledge that characterized Modernism

*Implementing Adaptation Strategies by Legal, Economic and Planning Instruments on Climate Change* Routledge

The causes and effects of climate change are just as varied as the proposed solutions and approaches for dealing with the problem. Given the global character of climate change, comprehensive global cooperation is called for that leads to effective and appropriate international action in accordance with the respective responsibilities. These will inevitably differ depending on the capabilities and the

social and economic situations of the respective actors. The contributions in this book present a variety of ideas, approaches and tools regarding the adaptation to climate change in specific countries and regions. In addition to examining (existing) legal instruments, they also focus on the implementation of economic instruments and planning tools, as well as their (further) development. Rather

than simply discussing strategies to counteract climate change by reducing emissions, the authors also search for ways of actively adapting to climate change.

International Encyclopedia of Geography, 15 Volume Set Routledge

This report suggest ways to reduce the costs of implementing and monitoring agricultural policies without compromising the aims of the policies.
