A NEW AND ESSENTIAL RESOURCE FOR THE PRACTICE OF EPIDEMIOLOGY AND PUBLIC HEALTH The CDC Field Epidemiology Manual is a definitive guide to investigating acute public health events on the ground and in real time. Assembled and written by experts from the Centers for Disease Control and Prevention as well as other leading public health agencies, it offers current and field-tested guidance for every stage of an outbreak investigation -- from identification to intervention and other core considerations along the way. Modeled after Michael Gregg's seminal book *Field Epidemiology*, this CDC manual ushers investigators through the core elements of field work, including many of the challenges inherent to outbreaks: working with multiple state and federal agencies or multinational organizations; legal considerations; and effective utilization of an incident-management approach. Additional coverage includes: · Updated guidance for new tools in field investigations, including the latest technologies for data collection and incorporating data from geographic information systems (GIS) · Tips for investigations in unique settings, including healthcare and community-congregate sites · Advice for responding to different types of outbreaks, including acute enteric disease; suspected biologic or toxic agents; and outbreaks of violence, suicide, and other forms of injury For the ever-changing public health landscape, The CDC Field Epidemiology Manual offers a new, authoritative resource for effective outbreak response to acute and emerging threats. *** Oxford University Press will donate a portion of the proceeds from this book to the CDC Foundation, an independent nonprofit and the sole entity created by Congress to mobilize philanthropic and private-sector resources to support the Centers for Disease Control and Prevention's critical health protection work. To learn more about the CDC Foundation, visit www.cdcfoundation.org.

How leaders can recast innovation's toughest trade-offs—efficiency vs. flexibility, consistency vs. change, product vs purpose—as productive tensions. Why is leading innovation in today's dynamic business environment so distressingly hit-or-miss? More than 90 percent of high-potential ventures don't reach their projected targets. Surveys show that 80 percent of

executives consider innovation crucial to their growth strategy, but only 6 percent are satisfied with their innovation performance. Should leaders aim for Steve Jobs-level genius, shower their projects with resources, or lean in to luck and embrace uncertainty? None of the above, say Christopher Bingham and Rory McDonald. Drawing on cutting-edge research and probing interviews with hundreds of leaders across three continents, in *Productive Tensions* Bingham and McDonald find that the most effective leaders and successful innovators embrace the tensions that arise from competing aims: efficiency or flexibility? consistency or change? product or purpose? Bingham and McDonald spotlight eight critical tensions that every innovator must master, and they spell out, with dozens of detailed examples of both success and failure, how to navigate them. How do you excite customers about a product they've never imagined? When is it wise to accept what the data is telling you, and when should you ignore the data and plow forward anyway? How can you maintain stakeholders' trust and support during radical unforeseen course corrections? Bingham and McDonald guide readers through innovation's thorniest tensions, using examples drawn from the experience of organizations as varied as P&G, Instagram, the US military, Honda, In-N-Out Burger, Slack, Under Armour, and the snowboarding company Burton.

This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1913 edition. Excerpt: ...south of Salt Lake; as, Park City, Bingham, Mercur, and Tintic. Large amounts of silver-lead ore are produced by the Park City district. This State is fifth in the production of gold and silver. It is one of the most promising fields in the West and the wise prospector will make no delay in getting into it. 606. Coal.--This State has exceedingly promising coal fields of which but little has been published. The present. fields are in Rock Cliffs, Wasatch, Weber River, and Southern districts. 607. The State produced over \$400,000 in coal in 1907, being twenty-second in rank. 608. Copper.--The chief copper districts are Bingham, Park City, Tintic, Frisco, and Alta. Less important are Little Cottonwood, Ophir, and Tutsagubet. I 609. According to J. M. Boutwell, the copper ores of Bingham are the result of contact metamorphism brought about by monzonite intrusions through quartzites and limestones. The most marked mineralization is in the monzonite that has been most extensively fractured, the fractures permitting the access of the mineral solutions. This information should be of value to prospectors and operators as well. 610. At Park City the copper ore occurs in fissure veins and replacement deposits in limestone closely associated with porphyry intrusions. 384. 611. Utah produced about \$64,000,000 worth of copper in 1907, chiefly from Bingham and Park City, Tintic, and Frisco districts. 612. Antimony.--Antimony ore is mined in the southeastern part of the State. 613. Lead.--Large amounts of lead are produced from argentiferous galena. 614. Scattered beds of pumice stone are in the northwest. 615. Mercury is produced at Mercur. 616. Valuable phosphates have been found, recent discoveries indicating that this State is a favorable field... [Interstate 215 Improvements](#), [Cities of Riverside and Moreno Valley, Riverside County, California](#) Irwin Professional Publishing This is a collection of methods of practical design, calculation and

numerical examples that illustrate how organized, analytical reasoning can lead to the discovery of clear, direct solutions to pollution especially in the areas of biosolids management, treatment, disposal and beneficial use. The book contains an extensive collection of detailed design examples and case histories, and a distinguished panel of authors provides insight into a range of topics.

The single most useful resource out there on how to build and grow sustainable places The need to make our communities sustainable is more urgent than ever before. *Toward Sustainable Communities* remains the single most useful resource for creating vibrant, healthy, equitable, economically viable places. This comprehensive update of the classic text presents a leading-edge overview of sustainability in a new fully illustrated, full-color format. Compelling new case studies and expanded treatment of sustainability in rural as well as urban settings are complemented by contributions from a range of experts around the world, demonstrating how "community capital" can be leveraged to meet the needs of cities and towns for: Energy efficiency, waste reduction, and recycling Water, sewage, transportation, and housing Climate change and air quality Land use and urban planning. Fully supported by a complete suite of online resources and tools, *Toward Sustainable Communities* is packed with concrete, innovative solutions to a host of municipal challenges. Required reading for policymakers, educators, social enterprises, and engaged citizens, this "living book" will appeal to anyone concerned about community sustainability and a livable future. Mark Roseland is director of the Centre for Sustainable Community Development at Simon Fraser University and professor at SFU's School of Resource and Environmental Management. He lectures internationally, advises communities and governments on sustainable development policy and planning, and has been cited as one of British Columbia's "top fifty living public intellectuals."

Mines and Minerals MIT Press

Molecular Cell Biology presents the key concepts in cell biology and their experimental underpinnings. The authors, all world-class researchers and teachers, incorporate medically relevant examples where appropriate to help illustrate the connections between cell biology and health and human disease. As always, a hallmark of MCB is the use of experiments to engage students in the history of cell biology and the research that has contributed to the field.
