Landscape and branding explores the way landscape is

conceptualised, conceived, represented and designed by professionals in a brand-driven age. Landscape - incorporating tangible physical space as well as intangible concepts, narratives, images, and experiences of place - is constructed by a number of creative industries. This book tests the hypothesis that place branding, a powerful marketing and management practice, increasingly blurs the distinction between the promotion of landscape and its production in design terms. Place branding involves the strategic and systematic composition of single-minded, experiential and market-friendly place identities which are consistently communicated across various media, including physical space. How does this implicate or transform notions of place, nature, landscape experience, and the qualitative value of landscape itself? How does this affect the role of landscape architecture? To answer these questions, place branding theory and practice is critically examined alongside an in depth case study of one specific landscape - the Blue Mountains (Australia). Projects undertaken between 1995 and 2015, including a branding strategy for the region, media campaigns, television, cinema, and several landscape architectural works in the public and private domain are comparatively analysed, focusing on the discourse, conventions and values informing their production, and the landscape narratives they convey.

Twelve Steps and Twelve Traditions Trade Edition Alfred a Knopf Incorporated

This book is a foundational guide to graph representation learning, including state-of-the-art advances, and introduces the highly successful graph neural network (GNN) formalism. Graph-structured data is ubiquitous throughout the natural and social sciences, from telecommunication networks to quantum chemistry. Building relational inductive biases into deep learning architectures is crucial for creating systems that can learn, reason, and generalize from this kind of data. Recent years have seen a surge in research on graph representation learning, including techniques for deep graph embeddings, generalizations of convolutional neural networks to graph-structured data, and neural message-passing approaches inspired by belief propagation. These advances in graph representation learning have led to new state-of-the-art results in numerous domains, including chemical synthesis, 3D vision, recommender systems, question answering, and social network analysis. It begins with a discussion of the goals of graph representation learning as well as key methodological foundations in graph theory and network analysis. Following this, the book introduces and reviews methods for learning node embeddings, including random-walk-based methods and applications to knowledge graphs. It then provides a technical synthesis and introduction to the highly successful graph neural network (GNN) formalism, which has become a dominant and fast-growing paradigm for deep learning with graph data. The book concludes with a synthesis of recent advancements in deep generative models for graphs -- a nascent but quickly growing subset of graph representation learning.

In 2009, BlackBerry controlled half of the smartphone market. Today that number is one percent. What went so wrong? Losing the Signal is a riveting story of a company that toppled global giants before succumbing to the ruthlessly competitive forces of Silicon Valley. This is not a conventional tale of modern business failure by fraud and greed. The rise and fall of BlackBerry reveals the dangerous speed at which innovators race along the information superhighway. With unprecedented access to key players, senior executives, directors and competitors, Losing the Signal unveils the remarkable rise of a company that started above a bagel store in Ontario. At the heart of the story is an unlikely partnership between a visionary engineer, Mike Lazaridis, and an abrasive Harvard Business school grad, Jim Balsillie. Together, they engineered a pioneering pocket email device that became the tool of choice for presidents and CEOs. The partnership enjoyed only a brief moment on top of the world, however. At the very moment BlackBerry was ranked the world's fastest growing company internal feuds and chaotic growth crippled the company as it faced its gravest test: Apple and Google's entry in to mobile phones. Expertly told by acclaimed journalists, Jacquie McNish and Sean Silcoff, this is an entertaining, whirlwind narrative that goes behind the scenes to reveal one of the most compelling business stories of the new century.
