**Lovers** Jones & Bartlett Publishers The first biography of the little-known real-life Tom Sawyer, told through a harrowing account of Sawyer's involvement in the hunt for a serial arsonist who terrorized mid-nineteenth century San Francisco. When San Francisco Daily Morning Call reporter Mark Twain met Tom Sawyer in 1863, he was seeking a subject for his first novel. He learned that Sawyer was a volunteer firefighter, local hero, and a former "Torch Boy," racing ahead of hand-drawn fire engines at night carrying torches to light the way. When a mysterious serial arsonist known as "The Lightkeeper" was in the process of burning San Francisco to the ground, Sawyer played a key role in stopping him, helping to contain what is now considered the most disastrous and costly series of fires ever experienced by an American metropolis. By chronicling how Sawyer took it upon himself to investigate, expose, and stop the arsonist, Black Fire details Sawyer's remarkable life and illustrates why Twain would later feel compelled to name his iconic character after him when writing *The Adventures of Tom Sawyer*. A vivid portrayal of the gritty,

corrupt, and violent world of the Gold Rush-era West, Black Fire is the most vibrant and thorough account of Sawyer's relationship with Mark Twain, and of the devastating fires that baptized San Francisco.

Letterland  
As the urban skyline rose and horsepower

gave way to motorization, the need increased for better ladders and other aerial equipment to fight fires in tall buildings. Ladders grew longer and the trucks that carried them evolved. Improved aerial ladders were fixed to truck beds and new methods were devised to deliver water and firefighters to those building heights. The hundreds of unique and dramatic photos that pack this

volume feature fire trucks equipped with a wide spectrum of devices evolved over more than a century, including aerial ladders, elevating platforms, aerial ladder platforms, and water towers. The book illustrates the evolution of the styles and function of the vital "hook-and-ladder trucks" that are an integral part of fire departments throughout the US. [index to vols.](#)

Learning A fireman in charge of burning books meets a revolutionary school teacher who dares to read. Depicts a future world in which all printed reading material is burned. Firefighter Image Comics This is a challenging time to be an academic with an interest in either the economy or the environment: we are being deluged with an over-supply of bad news. From the evidence

of accelerating climate change to the increasingly desperate policies of 'fiscal stimulus' and 'quantitative easing' it is difficult enough to keep up with the jargon, never mind the policy. Academics tend to spend their careers looking backwards, analysing what is already safely established and categorized. The present crisis has deprived us of that luxury.

Now more than ever our insights and our information are needed to save humanity from two interlinked crises that threaten our future. We need urgent solutions and we need co-operation: for this reason this issue includes

contributions from academics and from campaigners. Many have questioned whether we have time to worry about the environment now that the financial crisis has become so pressing. What we seek to make clear

in this special issue is that the two crises are in fact two aspects of the same crisis. It is a crisis of overconsumption, of debt-fuelled bingeing. It is a crisis of monetary-and-ecological debt; and of what happens when that debt starts to be called in.
