The Psychology of Women at Work [3 Volumes] John Wiley & Sons

Shana Abé has entranced countless readers with her passion-filled novels of adventure, intrigue, and romance. Now the author of *The Secret Swan* delivers a gift from the sea: three hauntingly beautiful tales connected by a legend, a locket, and a love beyond time. 531 a.d.: The tiny island of Kell is said to be enchanted, inhabited by an extraordinary creature who comforts shipwrecked sailors passing into the next world. Prince Aedan of the Isles believes in no such nonsense—until he awakens on Kell itself and meets the sensuous siren who rescued him from the sea. 1721: Ronan MacMhuirich, Earl of Kell, is

the target of an unlikely assassin: Leila, a mysterious woman from an exotic land. But his irresistibly beautiful would-be slayer is in just as much danger as Ronan when she falls for this man with a magic of his own. 2004: What do you do when you inherit a Scottish island you never knew existed—and find yourself pursued by a handsome stranger who wants to buy it from you? That’s what happens to Ruri Kell when she accepts Iain MacInnes’s invitation to visit her birthright, and listens to a proposition as sinfully tempting as everything else about him. Three seductive love stories, three passionate couples, all linked by one of the most romantic myths of all. *The Popularization of Mathematics* Simon and Schuster
Designed to accompany the new Open

University course in Environmental Monitoring and Protection, this is one of four new titles which will equip the reader with the tools to undertake Environmental Impact Assessments (EIAs). Used in planning, decision-making and management, EIAs review both the theoretical principles and environmental considerations of engineering and environmental projects to help steer fundamental legislation in the right direction. This book begins with a discussion of the basics of the hydrological cycle and a description of the natural aquatic environment including the normal composition of surface waters. Further chapters detail the sources of water pollution and the affects of water pollution including biological treatment of sewerage, sludge

treatment and disposal, before addressing industrial wastewater treatment and water quality assessment. Perspectives on Purity and Purification in the Bible Cambridge University Press

Why is math so hard? And why, despite this difficulty, are some people so good at it? If there's some inborn capacity for mathematical thinking—which there must be, otherwise no one could do it—why can't we all do it well? Keith Devlin has answers to all these difficult questions, and in giving them shows us how mathematical ability evolved, why it's a part of language ability, and how we can make better use of this innate talent. He also offers a breathtakingly new theory of language development—that language evolved in two stages, and its main purpose was

not communication—to show that the ability to think mathematically arose out of the same symbol-manipulating ability that was so crucial to the emergence of true language. Why, then, can't we do math as well as we can speak? The answer, says Devlin, is that we can and do—we just don't recognize when we're using mathematical reasoning.

The volume contains eight original studies, each of which focuses on a different chapter or central passage in Daniel and offers a new interpretation or reading of the passage in question. The studies span the Danielic tales and

apocalypses, offering innovative analyses that often challenge the scholarly consensus regarding the exegesis of this book. The eight chapters relate to Daniel 1, 2, 4, 5, 7, 9, Susanna, and the conception of angelology in Daniel. The studies are all based on careful textual analysis, including comparison between the Hebrew/Aramaic and Greek versions (especially regarding Daniel 4–6), and, in each case, the larger arguments are built upon solid philological foundations. Many of the insights proposed in this volume are based upon the realization that the authors of Daniel were frequently interpreters of earlier biblical books, and that the identification of these intertextual clues can be the key to unlocking the meaning of these texts.

In this sense, Daniel is similar to other contemporaneous works, such as Jubilees and Qumran literature, but the extent of this phenomenon has not been fully appreciated by scholars of the book. This volume therefore contributes to the appreciation of Daniel as both the latest book in the Hebrew Bible, and a significant work in the landscape of Second Temple Judaism.

This book is a collection of essays on purification and atonement in the Hebrew Bible that provides new insights into the discussion of these ideas by looking at the values of sociological and anthropological approaches to the topics. The collection also examines multivalence and polyvalence in ritual

and asks to what extent it is possible to speak of the function or meaning of ritual, even within the highly systematic priestly texts.

In the first part of the book, George Kennedy explores analogies to human

rhetoric in animal communication, possible rhetorical factors in the origin of human speech, and rhetorical conventions in traditionally oral societies in Australia, the South Pacific, Africa, and the Americas. Topics discussed include forms of reasoning, the function of metaphor, and the forms and uses of formal language. The second part of the book provides an account of rhetoric as understood and practiced in early literate societies in the Near East, China, India, Greece, and Rome, identifying unique or unusual features of Western discourse in comparison to uses elsewhere.

Hereditary Effects of Radiation
Routledge

This volume has its roots in the distant past of more than 20 years ago, the International Hydrologic Decade (IHD), 1964-1974. One of the stated goals of the IHD was to promote research into groundwater situations for which the state of knowledge was hopelessly inadequate. One of these problem areas was the hydrology of carbonate terrains. Position papers published early in the IHD emphasized the special problems of karst; carbonate terrains were supposed to receive a substantial amount of attention during the IHD. There were indeed many new contributions from European colleagues but, unfortunately,

in the United States the good intentions were not backed up by much in the way of federal funding. Some good and interesting work was published, particularly by the U. S. Geological Survey (USGS), but in the academic community the subject languished. About this same time the Cave Research Foundation (CRF), organized in 1957 to promote the systematic exploration, survey, and scientific study of the great cave systems of Mammoth Cave National Park, was casting about for a broader scope for its research activities. Up until that time, CRF research had been largely restricted to detailed mineralogical and geological investigations within the caves, with the main part of the effort concentrated on exploration and survey. The decision to

investigate the hydrology required a certain enlargement of vision because investigators then had to consider the entire karst drainage basin rather than isolated fragments of cave passage.

The 2001 report completed a comprehensive review of the risks to offspring following parental exposure to radiation. The review included an evaluation of those diseases which have both hereditary and environmental components. The major finding is that the total hereditary risk to the first

generation following radiation is less than one tenth of the risk of fatal carcinogenesis following irradiation. The Committee concluded that a sounder basis now exists for estimating the hereditary risks of radiation exposure. This is due to advances in molecular genetics, and in the evaluation of multifactorial diseases, such as coronary heart disease.
