The Psychology and Education of Gifted Children
 Psychology Press
 Originally published in 1977, this book looks at the problem of educating highly intelligent and gifted children, which it felt was of paramount importance to modern society. In the 1970s

education increasingly focused on average pupils, and often made excellent provision for handicapped children, the authors felt it all the more important for teachers, parents and educationalists generally to be made aware of the special needs of the bright and talented, and how they could best be catered for. In this book Professor Vernon and his two co-authors discuss the provision of special facilities for the education of these children at the time, particularly with reference to the UK and Canada. The serious losses to society when the gifted and specially talented are ignored or repressed are pointed out and the merits and difficulties of alternative schemes

are underlined. Detailed consideration is given to the psychological origins and nature of intelligence (both genetic and environmental) and of creativity and special talents (artistic and scientific), and also to available tests and other techniques for identifying exceptionally able children. The book was particularly intended to help teachers and educational administrators of the time, together with the parents of very bright children. *Creativity and Innovation* London : Methuen

Diverse Gifted Learners: Meeting the Needs of Special Populations in Gifted Education is a guiding resource for all stakeholder groups in gifted education to shift the equity needle of gifted programs in America. Though it is the right of Black, Hispanic/Latinx, twice-exceptional (2e), low-income, and other special populations of students to have access to advanced academic programs in the American educational system, complex and deep-rooted systemic issues often block the way. This seminal text thoughtfully brings the conversation around historically underrepresented students in gifted education to the forefront, drawing on

real-world examples to provide an accessible discussion of foundational, interdependent topics, including current research and promising educational practices. Readers will develop a basic theoretical understanding of the issues and be able to advance more responsive programs and experiences for low-income, racially, culturally, and linguistically diverse gifted students, and other diverse gifted populations. This text serves as a beacon to motivate K-12 educators, researchers, and scholars to carry the torch of advocacy on behalf of those students historically underrepresented in programs for the gifted and talented.

This title looks at the dogmatism that limits the perspectives of professionals,

policymakers, and other stakeholders in gifted education. In a field where concepts and definitions surrounding high ability have been contested for many years, there is increasing interest in clarifying these notions today. This book offers such clarity, searching outside of the predominant conceptual frameworks that dominate thinking about giftedness and talent, and examining ways in which this conceptual fog stunts and warps the development of gifted minds and limits the effectiveness of curriculum development and instruction. The book directly addresses the connection between dogmatism and high ability, exploring ways

in which otherwise bright individuals can make unintelligent decisions. Each contributor in this edited collection connects educational theory with teaching practice, examining the impact of policies such as No Child Left Behind. The chapters also explore the ways in which economic, cultural, and academic contexts affect both the gifted mind and education of the highly able in America and the rest of the world, while making recommendations for positive changes that can be enacted within gifted education in the future.
