Gray's Anatomy for Students is a clinically oriented, student-friendly textbook of human anatomy. It allows

students to learn anatomy within the context of many different curricular designs, and within ever-increasing time constraints. The artwork in this textbook presents the reader with a visual image that brings the text to life and presents views that will assist in the understanding and comprehension of the anatomy. Each regional anatomy chapter consists of four consecutive sections: conceptual overview, regional anatomy, surface anatomy, and clinical cases. The Second South Asia Edition of this textbook has two volumes: Volume One-The Body, Upper Limb, Lower Limb, Abdomen, Pelvis and Perineum; and Volume Two-Thorax, Back, Head and Neck, and Neuroanatomy. New content has been added on the basis of updates in the Fourth International Edition, including the addition of a new chapter on neuroanatomy. The innovative features of the First South Asia Edition such as Set Inductions, Outlines, and Flowcharts have been improved. Students are encouraged to use online resources available on MedEnact. A unique feature of this edition is that each chapter contains line diagrams, abbreviated as LDs, along with questions and answers. These line diagrams are sketches which are easy to draw during an examination and can help students to acquire anatomical concepts and do well in assessment. The questions and answers facilitate learning.

Competencies have been added in all the chapters since the curriculum is becoming competency based.

Gray's Anatomy for Students Elsevier The First South Asian adaptation builds on the past and looks to the future.

There is an emphasis on active learning by making the clinical relevance of anatomy explicit. The language has been simplified to aid students who have studied in the vernacular. The original illustrations have been retained and few illustrations have been added. There are more figure numbers mentioned in the text to encourage students to refer to the illustrations while learning. The text has been made more student friendly by adding generalizations, classifications and summaries. There are useful review materials at the beginning of the chapters which include digital resources for self-study. This new edition includes innovative features such as set inductions, outlines for subchapters and flowcharts to facilitate learning. Set inductions are mostly clinical scenarios to create interest and emphasize the need to study anatomy for healthcare professions. The outlines are a modern multimodal facilitating approach to various topics. They empower students to be focussed and self directed while they explore the content. They include learning objectives and materials for review. The components of the outline encourage the student to be aware of the need to create solutions to clinical

problems. The outlines help students direct their learning to recall facts, demonstrate and analyze relationships, use reason to explain concepts, appreciate the significance of structures and their relationships and apply anatomical knowledge. The “structures to be identified in a dissection are given as Level I, II and III which represent the “must know, desirable to know and nice to know content respectively.

Gray's Anatomy is probably one of the most iconic scientific books ever published: an illustrated textbook of anatomy that is still a household name 150 years since its first edition, known for its rigorously scientific text, and masterful illustrations as beautiful as they are detailed. The Making of Mr Gray's Anatomy tells the story of the creation of this remarkable book, and the individuals who made it happen: Henry Gray, the bright and ambitious physiologist, poised for medical fame and fortune, who was the book's author; Carter, the brilliant young illustrator, lacking Gray's social advantages, shy and inclined to religious introspection; and the publishers - Parkers, father and son, the father eager to employ new technology, the son part of a lively circle of intellectuals. It is the story of changing attitudes in the mid-19th

century; of the social impact of science, the changing status of medicine; of poverty and class; of craftsmanship and technology. And it all unfolds in the atmospheric milieu of Victorian London - taking the reader from the smart townhouses of Belgravia, to the dissection room of St George's Hospital, and to the workhouses and mortuaries where we meet the friendless poor who would ultimately be immortalised in Carter's engravings. Alongside the story of the making of the book itself, Ruth Richardson reflects on what made Gray's Anatomy such a unique intellectual, artistic, and cultural achievement - how it represented a summation of a long half century's blossoming of anatomical knowledge and exploration, and how it appeared just at the right time to become the 'Doctor's Bible' for generations of medics to follow.
