"Hope Jahren asks the central question of our time: how can we learn to live on a finite planet?" (Elizabeth Kolbert, author of *The*

Sixth Extinction). "Hope Jahren is the voice that science has been waiting for." —Nature Hope Jahren is an award-winning scientist, a brilliant writer, a passionate teacher, and one of the seven billion people with whom we share this earth. In *The Story of More*, she illuminates the link between human habits and our imperiled planet. In concise, highly readable chapters, she

takes us through the science behind the key inventions—from electric power to large-scale farming to automobiles—that, even as they help us, release greenhouse gases into the atmosphere like never before. She explains the current and projected consequences of global warming—from superstorms to rising sea levels—and the actions that we all can take to fight

back. At once an explainer on the mechanisms of global change and a lively, personal narrative given to us in Jahren's inimitable voice, *The Story of More* is "a superb account of the deadly struggle between humanity and what may prove the only life-bearing planet within ten light years" (E. O. Wilson).

The internal combustion is widely used as a power source in engineering. As the demands placed upon engines have increased, tribology has come to play an increasingly important role in their development. This book is a creative combination of intelligent design technology

and the tribological design of engines: engine tribology, information science, artificial intelligence, non numerical algorithms, modern design technology and dynamics to propose new methodology and technology for tribological engine design. It not only presents an effective approach to I engine design but also explores a new pattern for research

and I design methodology.
 · An essential reference for the design of more effective and efficient engines ·
 Proposes new techniques for tribological engine design
 · Combines advanced design technologies with traditional tribological design methods
