Around the year 1400, the poet Christine de Pizan initiated a public debate in France over the literary "truth" and merit of the Roman of the Rose, perhaps the most renowned work of the French Middle Ages. She argued against what she considered to be misrepresentations of female virtue and vice in the Rose. Her bold objections aroused the support and opposition of some of the period's most famous intellectuals, notable Jean Gerson, whose sermons on the subject are important literary documents. "The Quarrel of the Rose" is the name given by modern scholars to the collection of these and other documents, including both poetry and letters, that offer a vivid account of this important controversy. As the first dual-language version of the "Quarrel" documents, this volume will be of great interest to medievalists and an ideal addition to the Routledge Medieval Texts series. Along with translations of

the actual debate epistles, the volume includes several relevant passages from the Romance of the Rose, as well as a chronology of events and ample biography of source materials.

"At a time when each Society had its own medium of propagation of its researches ... in the form of

Transactions, Proceedings, Journals, etc., a need was strongly felt for bringing out a journal devoted exclusively to the study and advancement of Indian culture in all its aspects. [This] encouraged Jas Burgess to launch the 'Indian antiquary' in 1872. The scope ... was in his own words 'as wide as possible' incorporating manners and customs, arts, mythology, feasts, festivals and rites, antiquities and the history of India ... Another laudable aim was to present the readers abstracts of the most recent researches of scholars in India and the West ... 'Indian antiquary' also dealt with local legends, folklore, proverbs, etc. In short 'Indian

antiquary' was ...entirely devoted to the study of MAN - the Indian - in all spheres ... " -- introduction to facsimile volumes, published 1985.

This volume is the newest release in the authoritative series of quantitative estimates of nutrient intakes to be used for planning and assessing diets for healthy people. Dietary Reference Intakes (DRIs) is the newest framework for an expanded approach developed by U.S. and Canadian scientists. This book discusses in detail the role of vitamin C, vitamin E, selenium, and the carotenoids in human physiology and health. For each nutrient the committee presents what is known about how it functions in the human body, which factors may affect how it works, and how the nutrient may be related to chronic disease. Dietary Reference Intakes provides reference intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for different groups based on age and gender, along with a new reference intake, the Tolerable Upper Intake Level (UL), designed to assist an individual in knowing how

much is "too much" of a nutrient.
