MELINA BEATRICE

Mobile Commerce: Concepts, Methodologies, Tools, and Applications

University of Pennsylvania
Press

This latest biennial Review sets out transport developments in the ESCAP region, focusing on trade trends and forecasts, and their effect on transport, while also taking into account the external factors affecting transport systems and infrastructure provision, in the context of transport's contribution the UN global agenda on sustainable development. The Review acts as a mechanism for reporting on the achievements made in the provision of transport infrastructure and services; the challenges remaining in regional, urban and rural

connectivity; and on public health issues such as road safety and fossil fuel emissions.

Barriers to Bankable
Infrastructure Taylor &
Francis

This book is a comprehensive history of city planning in post-independence India. It explores how the nature and orientation of city planning have evolved in India's changing sociopolitical context over the past hundred or so years. The book situates India's experience within a historical framework in order to illustrate continuities and disjunctions between the pre- and post-independent Indian laws, policies, and programs for city planning and development. It focuses on the development, scope, and significance of professional planning work in the midst of rapid economic transition, migration, social disparity,

and environmental degradation. The volume also highlights the need for inclusive planning processes that can provide clean air, water, and community spaces to large, diverse, and fast growing communities. Detailed and insightful, this volume will be of interest to researchers and students of public administration, civil engineering, architecture, geography, economics, and sociology. It will also be useful for policy makers and professionals working in the areas of town and country planning.

Rule by Aesthetics IGI
Global

A behind-the-scenes, revelatory history of the controversial consulting firm traces its decades-long influence in both business and political arenas, citing its role in the establishment of mainstream practices and modern understandings

about capitalism while evaluating the failures that have compromised its reputation. 60,000 first printing.

Earth Sciences Routledge
 OECD's 2014 Economic Survey of India examines recent economic developments, policies and prospects. Special chapters cover health, the manufacturing sector and economic participation of women.

Global Warming and Climate Change

Springer Nature

India's urban transition has, of late, acquired multiple narratives. It is said to be rapid, moderate, slow, messy, and hidden. What underpins such multiple narratives is the central theme of the study, State of the Cities: India. Making use of an analytical framework that permits an examination of the shifts in the pace and pattern of India's urbanisation over a period of time, this study takes an in-depth look at the evidence on three of its key dimensions: the demographics, the economy, and the status of infrastructure and the environment. Some of the key questions that this study seeks responses to are: Is India's in the post-liberalisation period any

different? Does it show the effect of the changes in the macroeconomic parameters of the post-1991 period? Is it more or less productive and inclusive and environmentally secure? Is it spatially more equal or unequal? Does it in any way signal an inflection point in India's urban transition? Drawing from the analysis of the evidence comparable over time, the study spotlights several interesting questions: what would, for example, explain the acceleration in the pace of urbanisation under conditions of low economic growth and its moderation under conditions of high economic growth? What factors would explain a fall in the rate of growth in the urban share of gross domestic product (GDP) at such a low level of urbanisation, especially the GDP accruing from the manufacturing sector? This study makes a strong case for evidence-based assessment of India's urban transition, rather than to continue to commit, as many of us do, to the long-held, but specious narrative that India is in the midst of rapid urbanisation.

TA-Q-BIN Routledge
 The studies of Earth's

history and of the physical and chemical properties of the substances that make up our planet, are of great significance to our understanding both of its past and its future. The geological and other environmental processes on Earth and the composition of the planet are of vital importance in locating and harnessing its resources. This book is primarily written for research scholars, geologists, civil engineers, mining engineers, and environmentalists. Hopefully the text will be used by students, and it will continue to be of value to them throughout their subsequent professional and research careers. This does not mean to infer that the book was written solely or mainly with the student in mind. Indeed from the point of view of the researcher in Earth and Environmental Science it could be argued that this text contains more detail than he will require in his initial studies or research.

Cases on Learning Design and Human Performance Springer
 This book provides insights into commercial and residential real estate markets in one of the world's fastest growing

regions: South Asia. Despite being the growth leader of the future, South Asia is among the "least integrated" regions with a large need for real-estate-specific information and knowledge. Scholars and industry practitioners from a variety of backgrounds come together to provide pan-regional and country-specific insights into—amongst others—institutional, economic and real estate market characteristics, real-estate-specific legislation, real estate financing, development and urban planning practices in Bangladesh, Bhutan, India, the Maldives, Nepal, Pakistan and Sri Lanka. A particular focus of the book is on topics such as the provision of affordable housing, sustainability, innovative office concepts such as co-working and the development of real estate investment trust (REIT) markets in South Asia. This book integrates knowledge on real estate markets in and across South Asian countries by means of country profiles and case studies to provide industry professionals, policy makers and scholars with a fundamental understanding of

characteristics, opportunities and challenges in the region. The book is intended for readers with interests in real estate development, finance and investment, urban planning and housing in South Asia. It is also suitable as a reference textbook for undergraduate and graduate students in programs focusing on real estate, economic development, urban planning and public policy in South Asia and other emerging countries.

No Ordinary Disruption

Harriman House Limited
This book attempts a representation of society in contemporary India through an ethnography woven around long-standing intractable conflicts — of displacement and rehabilitation, patriarchy, insurgency and counter-insurgency operations, and climate change. Each chapter in this volume offers a critical transformative narrative in response to these conflicts. It asks how social justice and equality is to be constructed and provides a fresh perspective. It is argued that social movements can no longer be concerned only with itemizing a checklist of

demands; it is now necessary to be free of the hegemony of current frames, categories, concepts and principles, and to rethink the 'promise'. The volume maintains that this effort to step out of the 'endless waiting' for delivery of a 'promised value' draws out the labour of transformative action. A valuable contribution to understanding social movements in India, this work challenges the established discourses around grassroots politics, progressive policies and legislations as well as radical mass movements. The book will interest students and researchers of social movements, conflict and peace studies, sociology and social anthropology, political science and development studies. It will also be useful to those working in the areas of human rights, social exclusion and inclusive policies.

Mind Over Matter Springer
Rule by Aesthetics offers a powerful examination of the process and experience of mass demolition in the world's second largest city of Delhi, India. Using Delhi's millennial effort to become a 'world-class city,' the book shows how

aesthetic norms can replace the procedures of mapping and surveying typically considered necessary to administer space. This practice of evaluating territory based on its adherence to aesthetic norms - what Ghertner calls 'rule by aesthetics' - allowed the state in Delhi to intervene in the once ungovernable space of slums, overcoming its historical reliance on inaccurate maps and statistics. Slums hence were declared illegal because they looked illegal, an arrangement that led to the displacement of a million slum residents in the first decade of the 21st century. Drawing on close ethnographic engagement with the slum residents targeted for removal, as well as the planners, judges, and politicians who targeted them, the book demonstrates how easily plans, laws, and democratic procedures can be subverted once the subjects of democracy are seen as visually out of place. Slum dwellers' creative appropriation of dominant aesthetic norms shows, however, that aesthetic rule does not mark the end of democratic claims making. Rather, it signals

a new relationship between the mechanism of government and the practice of politics, one in which struggles for a more inclusive city rely more than ever on urban aesthetics, in Delhi as in aspiring world-class cities the world over.

Modeling and Optimization in Green Logistics Notion Press

India's cities are in the midst of an unprecedented urban expansion. While India is acknowledged as a rising power, poised to emerge into the front rank of global economies, the pace and scale of its urbanisation calls for more effective metropolitan management if that growth is not to be constrained by gathering urban crisis. This book addresses some key issues of governance and management for India's principal urban areas of Mumbai, Kolkata and Hyderabad. As three of the greatest Indian cities, they have evolved in recent decades into large metropolitan regions with complex, overlapping and often haphazard governance arrangements. All three cities exemplify the challenges of urbanisation and serve here as case

studies to explore the five dimensions of urban governance in terms of devolution, planning, structures of delivery, urban leadership and civic participation. London, with its recent establishment of a directly elected Mayor, provides a reference point for this analysis, and signifies the extent to which urban leadership has moved to the top of the urban governance agenda. In arguing the case for reform of metropolitan governance, the book demonstrates that it would be too simplistic to imagine that London's institutional structure can be readily transposed on to the very different political and cultural fabric of India's urban life. Confronting India's urban crisis with a comparative analysis that identifies the limits of policy transfer, the book will be particularly valuable to students and scholars of Politics, Governance, and Urban studies.

Slums Notion Press

In many parts of the world, knowledge is being put to work to accelerate and deepen the development process, promoting innovation and helping to generate wealth and jobs. This book

discusses advanced development strategies that take into account education, information and communication technology, infrastructure, innovation, and the prerequisite economic and institutional regimes. *India's Economic Resurgence* Oxford University Press, USA Economics is a social science concerned mainly with description and analysis of the production, distribution, and consumption of goods and services. Beyond the various theories and models, however, economics has close relationship with day to day life. This book reviews the economic journey of India over the last seventy years, and seeks to stimulate the readers' thinking on some major issues and potentialities facing the Indian economy. Five main themes flow through the book - India's potential to be the World's third largest economic power by 2030, the challenges of socio-economic equity that India faces, the several opportunities that India has in that journey, the critical role of governance, leadership, management and administration, and the importance of mindset

changes to power India's future economic growth. A special focus is laid on the role of government policies and projects in socio-economic development. The book sensitises the readers, including college students in general, and students of economics in particular, to the happenings around us which have significant economic import. The book makes all through its seventy chapters several suggestions to power India's growth as a global economic superpower, on a plank of socioeconomic equity. This book serves as an expansive thought primer and focussed execution guide for an economically independent and resurgent India. Construction 4.0 Taylor & Francis "To avoid climate disaster, we have a single mission to protect, conserve and hand over the planet to the next generation. The time has already lapsed when we thought we could greedily exploit the exhaustible natural resources of mother earth. Now we have come to know that the world is not a piece of commodity to squander her natural wealth without offsetting the cost of emission or discharge of waste. There is only one

considerably serious concern that will markedly define the future consequence of this planet more than any other, is the threat of global warming"....Inter Govt Panel On Climate Change Climate change is no longer a dilemma or a riddle to solve. Science has proved it beyond reasonable doubt. It is happening here and now with all of us where we have already crossed multiple tipping points of no return. Climate change is very complex, yet the solution is very simple. "Just stop burning fossil fuels"...A K Singh "We had a 67 percent chance of limiting the global temperature rise to below 1.50 C till 2018. We emit 42 Gt of CO2 every year. Now we have left not more than 420 Gt of CO2 budget to squander at current emission level within roughly another 8 years"....IPCC page 108, chapter 2. "People are suffering. People are dying. Entire ecosystems are collapsing. We are in the beginning of mass extinction. And all you can talk about is money and fairy tales of eternal economic growth. How dare you" !....Greta Thunberg Sweden **The Firm** World Scientific The global economic

system is experiencing a profound period of rapid change. The emergence of globalised production and distribution systems, which bring together diverse constellations of economic actors through a complex regime of global corporate governance, state regulation and new international divisions of labour, demands corresponding and innovative explanatory models. Global value chains (GVCs) and global production networks (GPNs) have been particularly useful as conceptual frameworks for understanding the global market engagement of firms, regions and nations. This book examines the rise of GVCs and GPNs as dominant features of the international political economy. It brings together leading thinkers in the field and sets out new directions for future scholarship in understanding the contemporary global economic system. In doing so, this book makes a significant contribution to our understanding of the international political economy and the global economic system in the post-Washington Consensus era of

contemporary capitalism. This book was published as a special issue of the Review of International Political Economy. *Intractable Conflicts in Contemporary India* Rowman & Littlefield This book presents selected papers from the 6th International Conference on Advances in Energy Research (ICAER 2017), which cover topics ranging from energy optimization, generation, storage and distribution, and emerging technologies, to energy management, policy, and economics. The book is inter-disciplinary in scope and addresses a host of different areas relevant to energy research, making it of interest to scientists, policymakers, students, economists, rural activists, and social scientists alike.

Building Knowledge Economies Taylor & Francis

This book examines India's ten years of experience developing Special Economic Zones (SEZs) and the performance of SEZs in the context of India's growing international engagement, its endeavours to attract domestic and foreign investment in manufacturing and

services and its aim to increase and diversify exports of goods and services. SEZs are industrial enclaves/clusters within a country that receive certain incentives and business facilitation benefits that are not generally available to the rest of the country. To facilitate private and foreign investment in SEZs, India introduced the SEZ policy in 2000, which was followed by the SEZ Act in 2005. After ten years under the Act, India now has one of the largest number of approved SEZs in the world and its SEZ policy remains heatedly debated, with a number of studies arguing both for and against it. Given this background, the book also identifies the challenges faced by SEZs in India and offers policy recommendations on how to make the SEZs an engine for India's economic growth and development that can more effectively link the country's manufacturing and services sectors to global value chains. Win-Win Corporations Institute of Social Sciences This report discusses the estimated \$1 trillion annual global infrastructure gap and provides

recommendations on how U.S. agencies and multilateral development banks can better incentivize private-sector investment in global infrastructure.

Mainstreaming Climate Co-Benefits in Indian Cities

John Wiley & Sons
This report describes the findings of the research that the McKinsey Global Institute (MGI) launched 21 months ago in collaboration with the India office of McKinsey & Company. The purpose of this research project was to understand how India's urbanization might evolve, explore the many problems facing India's fast-growing cities and what policy makers can do to mitigate the strains of urban life in India and maximize the opportunities offered by cities.

E-Retailing Challenges and Opportunities in the Global Marketplace

World Bank Publications

Why did Ratan Tata decide to pay for all the victims of 26/11 whether injured in the Taj or anywhere else? Why did HDFC's Aditya Puri insist that employees leave for home by 5.30 p.m.? How did HUL develop a cheaper, better product to beat its competitor, Nirma? What do Taj

Hotels, HDFC, HUL, L&T and BPCL have in common? They are the win-win corporations! Based on over a decade of research, Shashank Shah takes these truly outstanding Indian companies and studies how they do business. Each of these companies has exceptional practices when it comes to stakeholder management. Whether the stakeholder is an employee, customer, investor, vendor or even society at large, these companies reveal how looking at everyone else's interests doesn't really mean compromising on your own. Often, the two complement each other and that is what makes a win-win solution for everyone. This book gives an inside look into what motivates exceptional companies and how they are a cut above the rest. Full of fascinating anecdotes, leadership philosophy and background stories of organizations, *Win-Win Corporations* is an inspiring read into what makes companies great. *Smart Cities and the Poor* Oxford University Press
Global value chains (GVCs) are fraught with the phenomenon of fragmentation and dispersion of production

across the world. India presents a unique example with its high potential in manufacturing capability but low integration in GVCs. This book examines the reasons why India has failed to integrate within GVCs so far and looks at key examples to understand the impediments in this process. The chapters bring together case studies from across the manufacturing industry - labour-intensive (garment, paper and diamond), capital-intensive (automobile and petrochemical), and knowledge-intensive (semi-conductor microchip, chemical and pharmaceutical) sectors. Together, they present stories of successful integration of some firms in GVCs as well as the difficulties faced by them. The volume also highlights the importance of GVCs in the context of developing countries in terms of benefits such as income and value generation, knowledge and technology collaborations, and advances in systems and processes. This book will interest scholars and researchers in economics, international trade studies, development

economics and business
management as well as to

practitioners,
policymakers,
government officials, and

those in the corporate
sector.
