discussion of key issues.” -Kate Briggs, University of West Georgia “The book is well written, easy to understand, and covers all of the necessary topics to gain an appreciation for the field of clinical psychology.” -David Topor, The

University of North Carolina at Greensboro “The most impressive aspect of this material is the comprehensive nature of the text. The breadth, clarity, and usefulness of the coverage is first rate.” -Alan Whitlock, University of Idaho “This is very

balanced in presentation-perhaps the least biased text for clinical psych I’ve seen” -Elizabeth E. Seebach, Saint Mary's University of Minnesota "Very user-friendly- more interactive (in terms of thinking questions, ect.) than other similar texts."

For the past decade, author Tian Dayton has been researching trauma and addiction, and how psychodrama (or sociometry group psychotherapy) can be used in their treatment. Since trauma responses are stored in the body, a

method of therapy that engages the body through role play can be more effective in accessing the full complement of trauma-related memories. This latest book identifies the interconnection of trauma and addictive behavior, and shows why they can become an unending cycle. Emotional and psychological pain so often lead to self-medicating, which leads to more pain, and inevitably more self-medicating, and so on--ad infinitum. This groundbreaking book offers readers effective ways to work through their traumas in order to heal their addictions and their predilection toward what clinicians call self-medicating (the abuse of substances [alcohol, drugs, food], activities [work, sex, gambling, etc.] and/or possessions [money, material

things].) Readers caught up in the endless cycle of trauma and addiction will permanently transform their lives by reading this book. Therapists treating patients for whom no other avenue of therapy has proved effective will find that this book offers practical, lasting solutions. Case studies and examples of this behavioral phenomenon will illustrate the connection, helping readers understand its dynamics, recognize their own situations and realize that they are not alone in experiencing this syndrome. The author deftly combines the longstanding trauma theories of Van der Kolk, Herman, Bowlby, Krystal and others with her own experiential methods using psychodrama, sociometry and group therapy in the treatment of addiction and posttraumatic stress

disorder. While designed to be useful to therapists, this book will also be accessible to trade readers. It includes comprehensive references, as well as a complete index.

Mindfulness-Based Substance Abuse Treatment for Adolescents is a group-based curriculum incorporating mindfulness, self-awareness, and substance-abuse treatment strategies for use with adolescents dealing with substance use. The evidence-based, how-to format provides a curriculum for professionals to implement either partially, by picking and choosing sections that seem relevant, or in full over a number of weeks. Each session

comes equipped with clear session agendas, example scripts and talking points, what-if scenarios that address common forms of resistance, and optional handouts for each session. Sections cover the major principles of working with adolescents—relationship building, working with resistance, and more—along with a full curriculum. The book is a natural fit for psychotherapists, but addiction counselors, school counselors, researchers, mentors, and even teachers will find that Mindfulness-Based Substance Abuse Treatment for Adolescents changes the way they work with young people.

Spirituality often plays a critical role in health and wellness, yet few have explored in detail the process through which practitioners can identify and use clients' spiritual strengths to their mutual advantage. To address this gap, this practice-oriented text equips helping professionals with the tools they need to administer spiritual assessments ethically and professionally. David R. Hodge outlines a number of assessment approaches, including an implicit method

for evaluating "secular" forms of spirituality. Case examples illustrate the implementation of these strategies in different clinical settings and with groups from diverse racial, geographic, and socioeconomic backgrounds.

Qualitative Nursing Research addresses many of the problematic issues in qualitative research. Leading qualitative methodologists from orientations in phenomenology, grounded theory and ethnography contribute chapters on their favourite issues, which also form the bases for the 'dialogues' which alternate with each chapter. With the exception of a few chapters that describe a single method, the problems discussed relate to every qualitative

nursing project: improving the use of self; examining one's own culture; some myths and realities of qualitative sampling; debates about counting and coding data; and ethical issues in interviewing.

This book on family assessment integrates psychodynamic and systemic perspectives in a unique way. U.S. and

European authors draw from both perspectives and integrate their cultural backgrounds. In this book the family is evaluated on three levels: the individuals, the dyads and triads, and the family system. Interwoven with clinical examples, the first part discusses the importance of the initial interview, from the first contact with a family to goal setting and treatment planning. The second part presents the various clinical perspectives that underlie the three-level model. These perspectives include the family's contextual factors such as its stage in the family life cycle, its social world, and related areas such as parenting styles and behavior. Finally, the third part presents some clinical applications focusing on the use of family sculpting procedures as

assessment tools. This family assessment book is a true integration of theoretical perspectives and international expertise, edited and written by leading family assessment researchers from the United States and Europe.

Development* Routledge

In common with *Therapeutic Practice in Schools: Working with the Child Within* (Routledge 2012), this second volume serves as a practical handbook for school-based counsellors, psychotherapists, arts therapists and play therapists working with young people. Written in accessible language, it is eminently applicable to the practice of both qualified and trainee therapists. *Therapeutic Practice in Schools: The Contemporary Adolescent* begins with an overview of key psychoanalytic ideas informing our understanding of adolescence before moving on to focus on life circumstances and issues which commonly bring young people to the therapist's consulting room in the

school. Dedicated chapters on key themes including identity, relationships, sex and sexuality, anger issues, self-harm, bereavement and bullying aim to deepen our understanding of the adolescent experience while also providing the therapist with invaluable insights into what one might say in the 'here and now' of the session. Chapter authors, all with considerable experience in the field, discuss approaches to sustaining the therapeutic relationship in the face of ambivalence or defiant resistance as well as thinking about the impact of social media on all aspects of adolescent development. The advantages and limitations of working with adolescents in the educational setting where school staff will have their own reasons for referring students for

therapy, while the young people themselves might come with a very different agenda, are also covered. It is widely acknowledged that engaging troubled or troublesome adolescents in therapy can make an enormous

difference to their lives. This book ensures that both trainee and qualified therapists are supported in the often daunting yet ever stimulating and enlivening task of working with young people in the school setting.
