This guide reveals how writers can utilize cognitive storytelling strategies to craft stories that ignite readers' brains and captivate them through each plot element. Imagine knowing what the brain craves from every tale it encounters, what fuels the success of any great story, and what keeps

readers transfixed. *Wired for Story* reveals these cognitive secrets—and it's a game-changer for anyone who has ever set pen to paper. The vast majority of writing advice focuses on "writing well" as if it were the same as telling a great story. This is exactly where many aspiring writers fail—they strive for beautiful metaphors, authentic dialogue, and interesting characters, losing sight of the one thing that every engaging story must do: ignite the brain's hardwired desire to learn

what happens next. When writers tap into the evolutionary purpose of story and electrify our curiosity, it triggers a delicious dopamine rush that tells us to pay attention. Without it, even the most perfect prose won't hold anyone's interest. Backed by recent breakthroughs in neuroscience as well as examples from novels, screenplays, and short stories, *Wired for Story* offers a revolutionary look at story as the brain experiences it. Each chapter zeroes in on an

aspect of the brain, its corresponding revelation about story, and the way to apply it to your storytelling right now.

"This book features 32 interviews with the post-punk era's most innovative musicians and colourful personalities. It also includes conversations with the most influential of label bosses, managers, record producers, DJs and journalists. Crackling with argument and anecdote, these conversations bring

a rich human dimension post-punk's exceptional characters, from their earliest days to their glorious and sometimes disastrous musical adventures."--Global Books in Print.

The eighties was a golden era for British pop: Radio One served as the soundtrack of the nation; the chart run-down on Sunday evenings was compulsory listening - ditto watching Top of the Pops and reading Smash Hits. It also saw the

launch of the Now That's What I Call Music series. In the States, the arrival of MTV helped usher in what became known as the 'Second British Invasion', echoing the success of the Beatles twenty years earlier. Wired For Sound tells the remarkable story of the great eighties British bands (and Kajagoogoo) and how their music captured the nation's imagination: the more radical beginnings in the early eighties (the new romanticisms of Duran and Spandau, the 'protest

pop' of early Wham!); the full pomp of their mid-eighties success (the worldwide tours, the glamorous video shoots, the ubiquitous 'Choose Life' and 'Relax' T-shirts); and their fall from the top of pop's pedestal (the splitting up of Wham!, Boy George's drug problems). *Wired for Sound* will describe the subsequent descent to *Band Aid II* (Bros, Wet Wet Wet, Stock, Aitken and Waterman), which bookended the low point of the pop music that followed. *Wired For Sound*

will be the affectionate celebration of both a musical youth and the era when young guns went for it. This is a book for anyone who grew up reading *Smash Hits*, soundtracked their teenage years on C90 cassettes and remembers a time when it really mattered who was number one.

This is a significant novel featuring Ted, a white, privileged middle-class man, struggling to come to terms with his disintegrating extended family of eccentrics, addicts, and potential-

killers - and how they should fit into the emerging new scheme (or chaos) of 21st century American life. From racism to immigration, religion to shooting sprees, social media to dementia, this is a funny, smart, and sometimes acerbically-startling dissection of a society on the edge.

'Too often we treat

popular music as

wallpaper surrounding us

as we live our lives. Jude

Rogers shows the emotional and cerebral heft such music can have. It's a personal journey which becomes universal. Fascinating' Ian Rankin 'Moving and absorbing, The Sound of Being Human mixes memoir, analysis, anecdote and personal chronicle into a mosaic that evokes what music means to the individual and the human tribe. A candid, beautiful read' Stuart Maconie The Sound of Being Human explores, in detail, why music plays such a deep-rooted role in so many

lives, from before we are born to our last days. At its heart is Jude's own story: how songs helped her wrestle with the grief of losing her father at age five; concoct her own sense of self as a lonely adolescent; sky-rocket her relationships, both real and imagined, in the flushes of early womanhood, propel her own journey into working life, adulthood and parenthood, and look to the future. Shaped around twelve songs, ranging from ABBA's 'Super Trouper' to Neneh

Cherry's 'Buffalo Stance', Kraftwerk's 'Radioactivity' to Martha Reeves and the Vandellas' 'Heat Wave', the book combines memoir and historical, scientific and cultural enquiry to show how music can shape different versions of ourselves; how we rely upon music for comfort, for epiphanies, and for sexual and physical connection; how we grow with songs, and songs grow inside us, helping us come to terms with grief, getting older and powerful memories. It is about music's power to

help us tell our own stories, whatever they are, and make them sing. *No Time to Spare* Univ of California Press

In the aftermath of the horrific 9-11 terrorist attack on the World Trade Center, surviving family members of the innocent victims come together in hundreds of grief counseling sessions to deal with their losses and depression. One small counseling group becomes so mired in their anger and frustration with their own government's inability to find the terrorists, they decide to go after them on their own. Drawing on their

individual strengths and diverse backgrounds, these survivors come up with a surprisingly simple plan to draw the reviled terrorist from his lair. Their personal journey of retribution takes them from New York's Times Square to Europe, from Russia to the Middle East, navigating oceans, traversing borders, and climbing mountains, all the while evading pursuers, for a fateful face-to-face meeting with the World's most sought after terrorist.

 Over the last several decades, video testimony with aging Holocaust survivors has brought these witnesses into the limelight. Yet the success of these projects has made it seem that little survivor testimony took place in earlier years. In truth, thousands of

survivors began to recount their experience at the earliest opportunity. This book provides the first full-length case study of early postwar Holocaust testimony, focusing on David Boder's 1946 displaced persons interview project. In July 1946, Boder, a psychologist, traveled to Europe to interview victims of the Holocaust who were in the Displaced Persons (DP) camps and what he called "shelter houses." During his nine weeks in Europe, Boder

carried out approximately 130 interviews in nine languages and recorded them on a wire recorder. Likely the earliest audio recorded testimony of Holocaust survivors, the interviews are valuable today for the spoken word (that of the DP narrators and of Boder himself) and also for the song sessions and religious services that Boder recorded. Eighty sessions were eventually transcribed into English, most of which were included in a self-published manuscript. Alan Rosen sets Boder's

project in the context of the postwar response to displaced persons, sketches the dramatic background of his previous life and work, chronicles in detail the evolving process of interviewing both Jewish and non-Jewish DPs, and examines from several angles the implications for the history of Holocaust testimony. Such early postwar testimony, Rosen avers, deserves to be taken on its own terms rather than to be enfolded into earlier or later schemas of testimony.

Moreover, Boder's efforts and the support he was given for them demonstrate that American postwar response to the Holocaust was not universally indifferent but rather often engaged, concerned, and resourceful.

From the world's foremost neuroscientist of romantic love comes a personal story of connection and heartbreak that brings new understanding to an old truth: better to have loved and lost than never to have loved at all. At thirty-seven, Dr. Stephanie Cacioppo was content to be single. She was fulfilled by her work on the neuroscience of romantic love—how finding and growing with a partner literally reshapes our brains. That was, until she met the foremost

neuroscientist of loneliness. A whirlwind romance led to marriage and to sharing an office at the University of Chicago. After seven years of being inseparable at work and at home, Stephanie lost her beloved husband, John, following his intense battle with cancer. In *Wired for Love*, Stephanie tells not just a science story but also a love story. She shares revelatory insights into how and why we fall in love, what makes love last, and how we process love lost—all grounded in cutting-edge

findings in brain chemistry and behavioral science. Woven through it all is her moving personal story, from astonishment to unbreakable bond to grief and healing. Her experience and her work enrich each other, creating a singular blend of science and lyricism that's essential reading for anyone looking for connection.

The Bloomsbury Handbook of Music Production provides a detailed overview of current research on the production of mono and stereo recorded music. The handbook consists of 33 chapters, each written by leaders in the field of music production. Examining the technologies and places of music production as well the broad range of practices - organization, recording, desktop production, post-production and

distribution - this edited collection looks at production as it has developed around the world. In addition, rather than isolating issues such as gender, race and sexuality in separate chapters, these points are threaded throughout the entire text.

Now, in *Energy Flash*, journalist Simon Reynolds offers a revved-up and passionate inside chronicle of how MDMA ("ecstasy") and MIDI (the basis for electronica) together spawned the unique rave culture of the 1990s. England, Germany, and

Holland began tinkering with imported Detroit techno and Chicago house music in the late 1980s, and when ecstasy was added to the mix in British clubs, a new music subculture was born. A longtime writer on the music beat, Reynolds started watching—and partaking in—the rave scene early on, observing firsthand ecstasy's sense-heightening and serotonin-surfing effects on the music and the scene. In telling the story, Reynolds goes way beyond straight music

history, mixing social history, interviews with participants and scene-makers, and his own analysis of the sounds with the names of key

places, tracks, groups, scenes, and artists. He delves deep into the panoply of rave-worthy drugs and proper rave

attitude and etiquette, exposing a nuanced musical phenomenon. Read on, and learn why is nitrous oxide is called “hippy crack.”
