The story of Hanukkah is the story of triumph of light over darkness, of the small miracles that give hope to an entire people.

In a series of eight powerful and evocative free-verse poems, award-winning author Karen Hesse captures the resilient spirit of the Jewish people through the voices of eight children at Hanukkah. The children—from Tamara in 12th-century England and Jeremie in 13th-century France to Havva in 17th-century Turkey and Ori in 20th-century Israel—have all experienced loss and hardship. But they are united by love, family, and their cherished stone

lamp. The stone lamp provides each with comfort and hope, for every time its wicks are lit, the endurance of the Jewish people is re-illuminated.

Westward: A Fictional History of the American West

Createspace Independent Publishing Platform
Fluid Mechanics, Second Edition deals with fluid mechanics, that is, the theory of the motion of liquids and gases. Topics covered range from ideal fluids and viscous fluids to turbulence, boundary layers, thermal conduction, and diffusion. Surface phenomena, sound, and shock waves are also discussed, along with gas flow, combustion, superfluids, and relativistic fluid dynamics. This book is

comprised of 16 chapters and begins with an overview of the fundamental equations of fluid dynamics, including Euler's equation and Bernoulli's equation. The reader is then introduced to the equations of motion of a viscous fluid; energy dissipation in an incompressible fluid; damping of gravity waves; and the mechanism whereby turbulence occurs. The following chapters explore the laminar boundary layer; thermal conduction in fluids; dynamics of diffusion of a mixture of fluids; and the phenomena that occur near the surface separating two continuous media. The energy and momentum of sound waves; the direction of variation of quantities in a shock wave; one- and two-dimensional gas flow; and the intersection of surfaces of discontinuity are also also considered. This monograph will be of interest to theoretical physicists.

This comprehensive, up-to-date book describes and details the wide range of modern radar systems and methods currently in use today.

From system fundamentals to functional descriptions of their subsystems, the reference covers radar principles, radar technology, and successful applications of that technology, and includes solved examples to illustrate critical principles. Appropriate for radar engineers, electrical engineers, flight test engineers, and those in related disciplines.

This text is intended for an advanced undergraduate (having taken linear algebra and multivariable calculus). It provides the necessary background for a more abstract course in

differential geometry. The inclusion of diagrams is done without sacrificing the rigor of the material. For all readers interested in differential geometry. One Summer at Deer's Leap Elsevier

"A simple push of a button and the world will never be the same. Martina Gable returns home to spend Christmas break with her family, but the relaxing vacation she expects is not even close to what she'll get. Sanjay knows more than he should about Project Eden's plan, and will do whatever he can to keep the girl he loves alive and safe. A boy named Brandon Ash runs for his life in the hills of Montana, wanting only to see his family again. But first there is Daniel, the boy's father, who watches Olivia Silva's finger hover over the enter key that will decide the fate of humanity. Do you think you're safe?" -- p. [4] of cover.

The Dating Playbook for Men IntechOpen

Jane Austen is regarded as one of the greatest novelists in the English literary canon, and recent film and television adaptations of her works have brought them to a new audience almost 200 years after her untimely

death. Yet much remains unknown about her life, and there is considerable interest in the romantic history of the creator of Elizabeth Bennett and Mr Darcy. Andrew Norman here presents a fresh account of her life, breaking new ground by proposing that she and her sister, Cassandra, fell out over a young clergyman, who he identifies for the first time. He also suggests that, along with the Addison's Disease that killed her, Jane Austen suffered from TB. Written by a consummate biographer, Jane Austen: an Unrequited Love is a must-read for all lovers of the author and her works. Fluid Mechanics Jones & Bartlett Learning

The American West. Just as America attracted millions to her shores by building upon a foundation of freedom, democracy, and a new start, the lands beyond the Mississippi would also attract people from all over the world with visions of opportunity and wide open spaces and provide America with legends and myths that have yet to die. In Westward, the history of the Old American West unfolds in twenty-eight original stories written

especially for this unique collection that commemorates the fiftieth anniversary of Western Writers of America. Featuring stories handpicked by four-time Spur Award-winning author Dale L. Walker, Westward is a time capsule of the Old American West, from the first horse ever seen by a North American Indian to a man who escaped from the Alamo, from the massacre at Mountain Meadows to Libbie Custer's great secret, from the Apache wars to the California gold rush. And such luminaries of the West as Crazy Horse, Jim Bridger, Jedediah Smith, King Fisher, Doc Holliday, Belle Starr, John Wesley Hardin, and the one black man to accompany the Lewis and Clark expedition are brought to life in these colorful and dramatic tales. Here, the ghosts of the Old West, some already there, others lured to that vast and trackless land of the setting sun, will talk to you in this volume of short stories to be treasured. Using the Engineer's Lathe in Clockmaking

HarperCollins UK

This book is a practical guide to selecting, setting up and using an engineer's lathe to create parts specifically for clockmaking or clock repairs. It begins as an instructional manual and consequently the first chapter assumes that the reader does not yet have a lathe and needs advice on choosing one. With over 160 diagrams and photographs, topics include: choosing and setting up the lathe; turning - materials and facing; boring and milling techniques; chucks, collets and face-plates; creating a height-centring gauge; pivots, wheels and pinions; removing and mounting gear wheels; fly

cutters; making a flat depthing tool and, finally, creating centre marking tools. The intent is to provide a gentle learning curve for the practical use of the lathe.

The convection and conduction heat transfer, thermal conductivity, and phase transformations are significant issues in a design of wide range of industrial processes and devices. This book includes 18 advanced and revised contributions, and it covers mainly (1) heat convection, (2) heat conduction, and (3) heat transfer analysis. The first section introduces mixed convection studies on inclined channels, double diffusive coupling, and on lid driven trapezoidal cavity, forced natural convection through a roof, convection on non-isothermal jet oscillations, unsteady pulsed flow, and hydromagnetic flow with thermal radiation. The second section covers heat conduction in capillary porous bodies and in structures made of functionally graded materials, integral transforms for heat conduction problems, non-linear radiative-conductive heat transfer, thermal conductivity of

gas diffusion layers and multi-component natural systems, thermal behavior of the ink, primer and paint, heating in biothermal systems, and RBF finite difference approach in heat conduction. The third section includes heat transfer analysis of reinforced concrete beam, modeling of heat transfer and phase transformations, boundary conditions-surface heat flux and temperature, simulation of phase change materials, and finite element methods of factorial design. The advanced idea and information described here will be fruitful for the readers to find a sustainable solution in an industrialized society.
