Engaging Theories in Interpersonal Communication SAGE

Communication is the most complex and elevating achievement of human beings. Most people spend up to 70 percent of our waking hours engaged in some form of communication. Listening and responding to the messages of others occupies much of this time; the rest is taken up by talking, reading, and writing. An additional consideration is the rich assortment of nonverbal cues humans share, which also constitute a form of communication. All together, the stream of verbal and nonverbal information that bombards our senses is composed of as many as 2,000 distinguishable units of interaction in a single day. The kinds of interaction change constantly: morning greetings, cereal labels, bus signs, charts, traffic lights, hate stares, graffiti, coffee shop chat, gestures, laughter, and head nods: The themes are endless. All of this constitutes subject matter for the study of communication. The book seeks

to acquaint students with a basic understanding of the process of human communication. The breadth and scope of subject matter is adaptable to a number of approaches to the first course in communication, whether theoretical, practical, contemporary, or traditional in orientation. The framework of this book introduces five topics of central interest to the field of communication theory. Part I describes the process of communication as it unfolds in face-to-face environments. Part II considers the symbolic significance of interpersonal behavior. Part III examines the organization of communicative acts and shows why human interactions tend to become more synchronous over time. Part IV explores the complex problem of understanding other people, demonstrating the tendency of understanding to become intersubjective. Part V accounts for the communicative significance of several basic human environments--communities, organizations, media, institutions, and culture. Understanding Communication Theory SAGE

Communication Theory Routledge

`This is a very clear and concise summary of media studies, present and future. There is no other book that can both be used as a teaching tool and can help scholars organize their thinking about new media as this book can' - Steve Jones, University of Chicago This book offers an introduction to communication theory that is appropriate to our post-broadcast, interactive, media environment. The author contrasts the `first media age' of broadcast with the `second media age' of interactivity. *Communication Theory* argues that the different kinds of communication dynamics found in cyberspace demand a reassessment of the methodologies used to explore media, as well as new understandings of the concepts of interaction and community (virtual communities and broadcast communities). The media are

examined not simply in terms of content, but also in terms of medium and network forms. Holmes also explores the differences between analogue and digital cultures, and between cyberspace and virtual reality. The book serves both as an upper level textbook for New Media courses and a good general guide to understanding the sociological complexities of the modern communications environment.

Communication Theory Routledge
Historically, the social aspects of language use have been considered the domain of social psychology, while the underlying psycholinguistic mechanisms have been the purview of cognitive

psychology. Recently, it has become increasingly clear that these two dimensions are highly interrelated: cognitive mechanisms underlying speech production and comprehension interact with social psychological factors, such as beliefs about one's interlocutors and politeness norms, and with the dynamics of the conversation itself, to produce shared meaning. This realization has led to an exciting body of research integrating the social and cognitive dimensions which has greatly increased our understanding of human language use. Each chapter in this volume demonstrates how the theoretical approaches and research methods of social and cognitive psychology can be successfully interwoven to provide insight into one or more fundamental questions about the process of interpersonal communication. The topics under investigation include the nature and role of speaker intentions in the communicative process, the production and comprehension of indirect speech and figurative language, perspective-taking and conversational collaboration, and the relationships between language, cognition, culture, and social interaction. The book will be of interest to all those who study interpersonal language use: social and cognitive psychologists, theoretical and applied linguists, and communication researchers.
