People who support this movement are happy to live in a downsized home -- their tiny house is a lifestyle that they adopt/adapt and are happy in doing so. While one might argue the disadvantages of living in a tiny space, the financial freedom that it brings along cannot be disregarded. The average size of a house in the United States of America was 1,500 square feet in the 1950's; now, when the family sizes are shrinking, the average house size is 2,400 square feet. The lavish spaces in a 2,400 square foot house lies dormant for most part of the year. One such classic example is the living room, which serves its purpose for a couple of hours during the Christmas season... rest of the time its existence is hardly noticed or acknowledged; ditto for the multiple bathrooms, the huge dining room, bedrooms, and garage parking. The cost one pays for a huge home that is hardly used is hefty -- a mortgage that stretches almost until the end of one's retirement. Add to this the maintenance cost and the carbon footprint of a huge house!

Living Big in a Tiny House Penguin This Old House meets Wayne's World in this zany guide to designing and building tiny homes Derek Diedricksen has always had a love for small, modest houses ever since his father gave him the book *Tiny Tiny Houses* by Lester Walker for his tenth birthday. Combining his artistic abilities, wild imagination, and his passion for small houses, he self-published *Humble Homes, Simple Shacks, Cozy Cottages, Ramshackle Retreats, Funky Forts, and Whatever the Heck Else we could Squeeze in Here* in 2009. This book is a collection of Diedricksen's creative/imaginative sketches for building small houses, shacks, cottages, and forts. The sketches are accompanied with hand-written commentary, both instructive and comical. Derek's main purpose is to get your

creative juices flowing and encourage you to get off the couch and use your hands. Believing that specific building plans squash creativity, he avoids too many detailed instructions, giving you the chance to put your own creative spin on your very own small abode (even if it is just in your imagination).

Tiny Houses Built with Recycled Materials Centennial Books

With "McMansions" increasingly giving way to "tiny" houses, the desire to downsize and be more ecologically and economically prudent is a concept many are beginning to embrace. Focusing on dwelling spaces all under 1,000 square feet, *TINY HOUSES* (Rizzoli, April 2009) by Mimi Zeiger aims to challenge readers to take a look at their own homes and consider how much space they actively use. Ranging from tree houses to floating houses, *TINY HOUSES* features an international collection of over thirty modular and prefab homes, each one embodying "microgreen living", defined as the creation of tiny homes where people challenge themselves to live "greener" lives. By using a thoughtful application of green living principles, renewable resources for construction, and clever ingenuity, these homes exemplify sustainable living at its best.
