"I think your work is a necessary and valuable exposure of this religious phenomenon and the appallingly cynical exploitation of the religious and cultural beliefs of the poor and the vulnerable. I would like to see it published." Suzanne Wilton Huddersfield, UK  
"The book is particularly apt at this period of Christianity in Nigeria because it addresses the 'money syndrome' that has crept into Christianity in Nigeria and the faking of the call of God.... The book addresses the yearning of many Christians who are worried by this menace but may not know how to discuss it." Reverend Kenneth Nwaubani Abia, Nigeria  
"I am particularly impressed by the depth of research that has gone into this book. It will generate intellectual discourse, challenge our spiritual guardians and mentors and it may well put some of them on the defensive." Hon. Kazeem Adio Osun, Nigeria  
"This book provides an interesting insight into the plight of religion in Nigeria and into the facet of the human condition that allows for the exploitation of the faithful and vulnerable individuals." Will Colbridge Penistone, UK  
"Very few publications, if any, capture through the religious prism the mechanical nature of developing Nigerian society in the way that this publication does. ..." Casmir Okoli London, UK  
"The book will, I believe, open the door for many who are still in the dark regarding the subject matter." Rev Fr Nicholas Nwagwu New York, USA

Alfred Adler was one of the most influential thinkers in psychotherapy – a physician, psychiatrist, author, and professor who wanted to answer the questions that plagued people during a significant time in history. His original ideas serve as a foundation for most modern theories of counseling and psychotherapy, ideas and writings that are brought back to life in this volume. Within, contemporary experts comment and introduce Adler's work through the lens of the 21st century. In doing so, they pay tribute to, analyze, and disseminate his classic, seminal papers that have significantly impacted the therapy field. The 23 papers included were chosen because of their relevance to today's issues, and their importance in Adlerian theory and practice. They detail the core elements of his theory, the tactics he used to advocate change in individuals and systems, and emphasize how contemporary his ideas are. Alfred Adler Revisited not only plays homage to a great professional, it revives his ideas and encourages debate over fundamental human issues.

Winner Best Edited Book Award presented by the Society for Research on Adolescence Immigration to the United States has reached historic numbers— 25 percent of children under the age of 18 have an immigrant parent, and this number is projected to grow to one in three by 2050. These children have become a significant part of our national tapestry, and how they fare is deeply intertwined with the future of our nation. Immigrant children and the children of immigrants face unique developmental challenges. Navigating two distinct cultures at once, immigrant-origin children have no expert guides to lead them through the process. Instead, they find themselves acting as guides for their parents. How are immigrant children like all other children, and how are they unique? What challenges as well as what opportunities do their circumstances present for their development? What characteristics are they likely to share because they have immigrant parents, and what characteristics are unique to specific groups of origin? How are children of first-generation immigrants different from those of second-generation

immigrants? *Transitions* offers comprehensive coverage of the field's best scholarship on the development of immigrant children, providing an overview of what the field needs to know—or at least systematically begin to ask—about the immigrant child and adolescent from a developmental perspective. This book takes an interdisciplinary perspective to consider how personal, social, and structural factors interact to determine a variety of trajectories of development. The editors have curated contributions from experts across a carefully selected variety of topics covering ecologies, processes, and outcomes of development pertinent to immigrant origin children. *Psychology: The Science of Mind and Behaviour 7th Edition*

The Fifth Edition of the classic *Developmental Research Methods* presents an overview of methods to prepare students to carry out, report on, and evaluate research on human development across the lifespan. The book explores every step in the research process, from the initial concept to the final written product, covering conceptual issues of experimental design, as well as the procedural skills necessary to translate design into research. Incorporating new topics, pedagogy, and references, this edition conveys an appreciation of the issues that must be addressed, the decisions that must be made, and the obstacles that must be overcome at every phase in a research project, capturing both the excitement and the challenge of doing quality research on topics that matter.

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. *Parenting Matters* identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Despite the fact that most people become parents and everyone who has ever lived has had parents, parenting remains a mystifying subject about which almost everyone has opinions, but about which few people agree. Striking permutations on the theme of parenting are emerging—single parenthood, blended families, lesbian and gay parents, and teen versus fifties first-time moms and dads. Divided into four volumes, the *Handbook of Parenting* is concerned with different types of parents, basic characteristics of parenting, forces that shape parenting, problems faced by parents, and the practical sides of parenting. Contributors have worked in different ways toward understanding all of these diverse aspects of parenting and look to the most recent research and thinking in the field to shed light on many topics every parent has wondered about. Because development is too subtle, dynamic, and intricate to admit that parental caregiving alone determines the course and outcome of ontogeny, volume 1 concerns how children influence parenting. Volume 2 relates parenting to its biological roots and sets parenting in its ecological framework. Volume 3 distinguishes among the cast of characters responsible for parenting and is revealing of the psychological make-ups and social interests of those individuals. Volume 4 describes problems of parenting as well as the promotion of positive parenting practices. Written to be read and absorbed in a single sitting, each chapter addresses a different but central topic in parenting, and is rooted in current thinking and theory as well as classic and modern research on that topic. All chapters follow a standard organization including an introduction to the chapter as a whole followed by historical considerations of the topic, a discussion of central issues and theory, a review of classic and modern research, forecasts of future directions for theory and research, and a conclusion. In addition to considering their own convictions and research, the chapter contributors present and broadly interpret all major points of view and central lines of inquiry.

Biller gives compelling evidence that fathers--so relatively under-researched--are very important to sound child development. He focuses on the positive results of active paternal involvement that effect an overall family environment, which is distributively nurturing and satisfying. The presence of a caring father encourages a child's body image, self-esteem, moral standards, and other important qualities. The child-father relationship is demonstrated to impact later life adjustment. Biller establishes, too, that variations in paternal involvement influence not only children but general family well-being including spousal relationships. This is a needed and timely work essential to understanding fathers' roles and potential in family life.
