NEW YORK TIMES BESTSELLER • “A fascinating look at how consumers perceive logos, ads, commercials, brands, and products.”—Time How much do we know about why we buy? What truly influences our decisions in today’s message-cluttered world? In *Buyology*, Martin Lindstrom presents the astonishing findings from his groundbreaking three-year, seven-million-dollar neuromarketing study—a cutting-edge experiment that peered inside the brains of 2,000 volunteers from all around the world as they encountered various ads, logos, commercials, brands, and products. His startling results shatter much of what we have long believed about what captures our interest—and drives us to buy. Among the questions he explores: • Does sex actually sell? • Does subliminal advertising still surround us? • Can “cool” brands trigger our mating instincts? • Can our other senses—smell, touch, and sound—be aroused when we see a product? *Buyology* is a fascinating and shocking journey into the mind of today’s consumer that will captivate anyone who’s been seduced—or turned off—by marketers’ relentless attempts to win our loyalty, our money, and our minds.

The global crisis the automotive industry has slipped into over the second half of 2008 has set a fierce spotlight not only on

which cars are the right ones to bring to the market but also on how these cars are developed. Be it OEMs developing new models, suppliers integrating themselves deeper into the development processes of different OEMs, analysts estimating economical risks and opportunities of automotive investments, or even governments creating and evaluating scenarios for financial aid for suffering automotive companies: At the end of the day, it is absolutely indispensable to comprehensively understand the processes of automotive development – the core subject of this book. Let's face it: More than a century after Carl Benz, Wilhelm Maybach and Gottlieb Daimler developed and produced their first motor vehicles, the overall concept of passenger cars has not changed much. Even though components have been considerably optimized since then, motor cars in the 21st century are still driven by combustion engines that transmit their propulsive power to the road surface via gearboxes, transmission shafts and wheels, which together with spring-damper units allow driving stability and ride comfort. Vehicles are still navigated by means of a steering wheel that turns the front wheels, and the required control elements are still located on a dashboard in front of the driver who operates the car sitting in a seat.

Since 1977, Jon Hassler's Staggerford series has entranced readers with its funny and charming depiction of life in small-town America. The New Woman is his latest visit to this Minnesota hamlet. At the age of eighty-eight, Agatha McGee has grudgingly moved out of her house on River Street and into the Sunset Senior Apartments. She's not happy about giving up her independence, and Sunset Senior's arts and crafts activities and

weekly excursions to the Blue Sky Casino are hardly a consolation. Meanwhile two of her close friends pass away, her nephew Frederick is drifting into depression, and a kidnapped little girl has suddenly appeared on her doorstep. With characteristic poise and dignity, Agatha takes on her problems and finds that the bonds of friendship and family are still the key to happiness at any age. Affectionate and life-affirming, *The New Woman* is another delightful trip to a town with a soul as real as rural America itself.
